

# Zero Install

[A decentralised cross-platform software installation system](#)

Feeds can be hosted on any normal website.

[Omirror](#) provides a list of all currently known feeds.

## Tools

**Zero Install Publishing Tools** - helps you create and update Zero Install feeds

**Ocompile** - create a binary release from source code

**Opublish** - utility to make creating injector interfaces easier

**Opublish-gui** - GTK editor for Zero Install feeds

**Orelease** - manage new releases with Zero Install

**FeedLint** - check your Zero Install feeds

**Make-headers** - creates -dev packages

**Otest** - test Zero Install programs

**Oexport** - create self-installing bundles for distribution on CD

**Oinstall** - decentralised installation system

**Orepo** - manage a repository of Oinstall feeds

**Owatch** - scans websites for new releases and triggers Otemplate if required

## GUI Apps

- [GUI apps are applications with a graphical user interface. You can use the "Integrate" button to create shortcuts for feeds.](#)

## Utilities

- [A selection of software utilities](#)

## Development

- You can use [Zero Install](#) to quickly get common development tools.

## Docker

- [Docker](#) is a popular container technology. You can use [Zero Install](#) access various Docker-related tools.

## Kubernetes

- [Kubernetes](#) is a container orchestration system. You can use [Zero Install](#) access various Kubernetes-related tools.

## Python

- [Python](#) is an interpreted, interactive, object-oriented programming language. You can use [Zero Install](#) to: [Get Python itself](#); [Run apps that need Python and Python libraries as dependencies](#)

## PowerShell

- [PowerShell](#) is an interactive shell and a scripting language. You can use [Zero Install](#) to: [Get PowerShell itself](#); [Run scripts that need PowerShell as a dependency](#)

## Perl

- [Install Perl4-CoreLibs](#), libraries historically supplied with Perl 4

## Ruby

- Ruby is a dynamic, open source programming language. You can use Zero Install to: Get Ruby development tools; Run apps that need Ruby as a dependency

## JavaScript

- JavaScript is an interpreted language. You can use Zero Install to: Get JavaScript development tools; Run apps that need JavaScript runtime (e.g. Node.js or Electron) as a dependency

## OCaml

- Install OCaml runtime, ML language implementation with a class-based object system

## Go

- Install Go, the tool for managing Go source code

## Java

- Java is programming language and runtime environment. You can use Zero Install to: Get Java development tools and SDKs; Run apps that need Java as a dependency

## .NET

- .NET is a software framework and runtime developed by Microsoft. You can use Zero Install to: Get .NET development tools and SDKs; Run apps

that need .NET as a dependency

## Libraries

- You can reference these libraries from other feeds as dependencies.
