

Apps

Unlike on other operating systems, in TROM-Jaro you can find all of your applications in one single place. No need to search the web, no need to use the Terminal.

Repositories

In TROM-Jaro you have two main sources where the software comes from: repositories and AUR.

The repositories contain software that is tested on Manjaro, and AUR only has software that is tested on Arch (what Manjaro is built upon) – however pretty much all the AUR software works on Manjaro (thus TROM-Jaro).

Mind you, not all the applications in "Add/Remove Software" are trade-free. To install trade-free applications go to our APPS page.

Add/Remove Software

In "Add/Remove Software" simply search for the name of the app you want to install. Once found, select for install and Apply.

https://wiki.tromjaro.alexio.tf/

You will see a popup showing you exactly what will be installed on your system – simply click "Commit", add your password, and the installation will proceed. Search, Select, Apply, Commit.

To uninstall do the same, select the installed application and "Apply".

If you are curious to see the "behind the scenes" processes when installing or uninstalling any applications, click "Details". Alternatively you can simply browse applications by categories or groups.

Recommended Software (Cross-Platform Software for Linux, MacOS and Windows):

- 1. Applmage
- 2. Discover Manjaro Apps

- 3. Flatpak
- 4. Homebrew
- 5. TROMjaro Apps Trade-Free
- 6. Zero Install

Awesome Apps

- 1. Awesome GNOME
- 2. Awesome KDE
- 3. Awesome Web Apps (that work without login)
- 4. Games on GitHub

Local apps

Applications installed on a local computer that can function without a network connection

Linux App Finder: All Applications

Linux Softpedia: Get Education Software, Get Science and Engineering Software

Sourceforge: Browse Open Source Software for Linux (recently updated)

AlternativeTo: Open Source Apps for Linux

Portable apps

Sometimes also called standalone, is a program designed to read and write its configuration settings into an accessible folder in the computer, usually in the folder where the portable application can be found. This makes it easier to transfer the program with the user's preferences and data between different computers. A program that doesn't have any configuration options can also be a portable application.
