- Manjaro 25.0 Zetar Release Review (2025/02/19 06:34)
Beginning of February after Lunar New Years we started our developement cycle of Manjaro 25.0 we code-named Zetar. Most likely the stable installer ISOs will be available in Mid-March featuring Plasma 6.3, GNOME 48 and XFCE 4.20. So far we released already two preview releases. Another might come end next week (CW9), to align with Plasma 6 release schedule. For GNOME mid March (CW13) based on their release schedule. In this topic we will discuss and reveal the changes we intend to do within this development cycle. And this time the stable branch is going along with it. So what does this mean? Most people avoid to use testing and unstable branches, therefore we get most of our needed feedback from the stable branch users. So more users, more feedback. The distro itself is still tested as best as we could within our development team, however we have not all the configurations of hardware on our end you might use. So issuing pacman -Q manjaro-release might reveal your current release you are on. Example: manjaro-release 25.0.0preview-1. When you however call some like lsb_release -r you will get a result

like Release: 25.0.0. We chose that to not confuse people and post threads about, why I'm now on an unstable or preview release. Our numbering is only for our installation medias. So the two current available ISOs shipped XFCE 4.20. Most users won't even notice big changes with it. Next week we will focus on Plasma 6.3. Another thing we will change is to change from ext4 to btrfs as the default file system. We already shipped support for btrfs in older releases. We also added automatic snapshots on btrfs with bootloader entries for these when btrfs was chosen by the user. Since our testing are all fine, why not make it now the defacto default. People can still change to ext4 or xfs in our auto-partitioning option or even format and structure their partition layout complete freely in the advanced mode of Calamares, the graphical installer we use. So feel free to give us early feedback during this development cycle of Manjaro 25.0. XFCE 4.20 Release 202502171051 · manjaro/release-review · GitHub Release 202502040706 · manjaro/release-review · GitHub Plasma 6.3 Release 202503050809 · manjaro/release-review · GitHub Release 202503180858 · manjaro/release-review · GitHub Release 202503240839 · manjaro/release-review · GitHub Gnome 48 Release 202503300425 · manjaro/release-review · GitHub 15 posts - 11 participants Read full topic

- [Testing Update] 2025-01-27 - Last Update of the year - libpamac, pamac-cli, libnfs (2025/01/27 03:10)

Hello community, here we have another set of package updates. This also marks the last update of the year. The Spring Festival is approaching, and on behalf of Manjaro, I would like to extend my warmest New Year wishes to you! We sincerely thank you for your continued support and trust in the past year. 2025 is the Year of the Snake. The Lunar New Year is on January 29 and the celebrations end with Lantern Festival on February 12. The auspicious festival of Lunar New Year is celebrated with pomp by East Asian communities around the globe, especially in countries like China, Taiwan, Hong Kong, Macau, Singapore, Vietnam, and Korea. It is also one of the most important festivals in Chinese culture. The festival marks the end of winter and the beginning of spring. Lasting 15 days, the Lunar New Year ends with the Lantern Festival, also known as the Chinese Valentine's Day. During that time most of us will head back to our hometowns to celebrate these events with our friends and families. Together will make the upcoming year a success. Till then … Current Promotions Find out all about our current Gaming Laptop the Hero with Manjaro pre-installed from Spain!
