F-Droid - Latest Packages

- Weekly deja-vus (2026/11/02 00:00)
  This Week in F-Droid TWIF curated on Monday, 02 Nov 2026, Week 45 Community News Dejavu, Your tabs, right where you left them. Workspaces, containers and split view, is a browser built on top of the Firefox components with a different design. Have a try and maybe you'll feel the déjà vu! @linsui notes some big updates: Finamp published 1.0 after 4 years of development with lots of new feathers. But this version on F-Droid is broken, so just skip it for now, we will keep you posted! i2pd is updated to 3.0.0, a version rewritten from scratch on top of i2pd 3.0.0. It has a new interface, editors for router settings and tunnels, built-in torrents, and full management of the router's data. The router now runs in a separate process, managed by a foreground service. See more in the changelog. @shuvashish76 brings more updates: ShizuCallRecorder is updated to 2.0.0 with a full refactoring. DetoxDroid: Digital Detox by Default is updated to 3.0.0, bringing lots of new features. @sidhant947 introduces their set of games on F-Droid: Degoogling Casual Gaming Anyone who has tried to play a simple puzzle game on a modern smartphone knows the pain. You download a basic 50MB logic game just to kill ten minutes, and suddenly it wants network permissions, location access, and show you advertising. Worse, you spend 15 seconds playing a level and 45 seconds watching unskippable video ads for sketchy casinos, or hitting paywalls asking you to buy 'gems' 'coins' 'diamonds' just to keep playing. When I committed to deGoogling my life and reclaiming my digital privacy, the biggest gap I noticed in the FOSS ecosystem was casual gaming. Leaving the centralized store ecosystem shouldn't mean giving up the games you love to play while waiting for the train or winding down at night or just resting. That frustration is what pushed me to start building and porting clean, lightweight, open-source games for the F-Droid community. No trackers, no telemetry, no dark pattern, no micro-transactions, and zero ads—ever. Just pure offline gameplay that respects your device and your privacy. All Games Made yet Puzzle (Suite of 300+ Games) Water Sort Match 3 Block Blast Queens Arrow Escape Nonogram Kakuro One Line Pipes Matrix Puzzle Einstein Riddle Screw Jam Hue Sort Shikaku Jigsaw Solitaire Learn Math Ludo Echo Tiles Tents Triple Match Binary Puzzle Colorgram Find Words Balancing Research Coursework and Bug Squashing I'm currently juggling these project alongside my academic research coursework, so my schedule gets pretty packed sometime. Even so, keeping these games smooth and bug-free is a massive priority for me. Whenever someone opens an issue on any of my repositories—whether it's a UI glitch on a specific screen size, a logic edge case, or a feature request—I actively track it and push fixes as soon as I get a breather between my research deadlines, many issues get stretched due to this which is a weak point currently. Seeing people actually play and enjoy software that doesn't spy on them makes the late-night debugging sessions completely worth it. Want a Game Ported to FOSS? Hit Me Up! My goal is simple: if there is a classic mobile game genre that is currently gate-kept behind proprietary store services, spyware SDKs, and relentless ad networks, I want an open-source version of it on F-Droid for everyone. Sometimes I lack the actual resources to bring a proper port which is why games like Echo Tiles and Jigsaw work when you load your own images and music. I'm working on a drawing game for kids this week, should be fun for them. If you stumble across a bug, want to contribute translations or code, or have a favorite game you wish had a clean, privacy-respecting port, reach out to me anytime! Drop an issue on my GitHub or email me. Tell me what you want to play next, and let's keep building a better, ad-free gaming ecosystem together. Removed Apps 1 apps were removed DeepLAndroid: Unofficial Android App for DeepL Translator (Naming things can be hard even when not touching

trademarked ones. We wish for a speedy comeback) Newly Added Apps 68 apps were newly added Alarm Plus: An app all about alarms Anchor: Connect Android and Linux for messages, files, notifications, camera, and more. You are welcome to join the TWIF forum thread. If you have any news from the community, post it there, maybe it will be featured next week To help support F-Droid, please check out the donation page and contribute what you can.

- Pumpkin flavored news (2026/10/25 00:00)
  This Week in F-Droid TWIF curated on Sunday, 25 Oct 2026, Week 43 Community News @thore pinged us for a big update of Ente Locker: Ente Locker now has document scanning, powered by what looks like copying FairScan’s code from Kotlin to Rust, surely that won’t end up in a drama: Big annoucement here Fairscan devs analysis here …grab some popcorn. @Licaon_Kter brings a post about 10 apps worth installing. It’s a 19

minutes read, but if you don’t have the time, here’s the TL;DR: Exodus, NewPipe, Fennec, Aegis, KeePassDX, Syncthing-Fork, AntennaPod, Phonograph Plus, Tusky, and Qalculate. L_K notes that Proton VPN - Secure and Free VPN has a new app added with reproducible builds enabled. The old app id will still get updates. Yet, naming an app “non-reproducible” made users confused, they technically are both reproducible, it’s just a question of who signed the package. Historically, the now named “non-reproducible” one is signed by F-Droid because when added, years ago, the app could not be made reproducible. But it went through a full rewrite, and the new codebase is much modern and easier to reproduce. We are in contact with the developers, they are aware and we will work with them to somehow combine both in a way that users like. @shuvashish76 reminds us of an update of Aard2 after 2 years. It includes a redesign with Material You and many other updates. Take a look at the changelog for more details. And BatteryBot Pro was updated after 5 years. If you’ve been using it for so long you also got a present, unfortunately. The app won’t update, so you’ll need to uninstall the old version and install the latest. Archived Apps 22 apps were archived Blichess: Play lichess games over Bluetooth Box Stacker: Box Stacker is a physics-based construction puzzle game. CountryCount: Track countries, visualize your progress, and explore where you’re going next. EhViewer NekoInverter: An E-Hentai Application for Android with censorship circumvention (A Policy issue) EstudiaTAI: Practice tests for the Spanish AGE IT Assistant exams. FastTrack: Track what your body is doing while fasting (Will come back in the next cycle) Forage: A shopping list front-end to your self-hosted Mealie instance. You are welcome to join the TWIF forum thread. If you have any news from the community, post it there, maybe it will be featured next week To help support F-Droid, please check out the donation page and contribute what you can.

- Steady pace (2026/10/16 00:00)
  This Week in F-Droid TWIF curated on Friday, 16 Oct 2026, Week 42 F-Droid core Wow, almost a month since our last weekly. A lot has happened, and most stayed the same. We were busy with apps inclusions, apps updates, client fixes and summits. The PR team is also the maintainer team, the testing team and the support team. Priorities take hold. Now, polishing the Client is a top priority, so we’ll talk about apps way below. F-Droid and F-Droid Basic were updated to 2.0.1 and 2.0.2 adding: Show Calculator icon when app hiding is enabled (Full only) Show panic app hiding explanation dialog (Full only) Fix notifications quirks (Thanks proletarius!) Add icon shortcuts for My Apps and Search Sort new apps by added date Fix Huawei/Honor crash when drawing adaptive app icons Fix app installation on old Xiaomi/Redmi devices Disable SessionInstaller on newer Chinese MIUI devices Translation updates While we had more than a dozen test versions, we still did not convince enough users to update and hit these fixed bugs early in the development process. An understandable problem given the Android ecosystem size and diversity. F-Droid Basic has been suggested for a while, so everyone already got the update. F-Droid’s extra features took a bit more time, but we are getting close to a release for everybody. If you’ve opted into betas you already got the updates, if not, you can do it now or manually expand Versions and update. Community News XDA covers (their) preferred short list of of must-have FLOSS apps, that made them “ditch their mainstream rivals”. Were you

even using “mainstream” apps anyway? While we acknowledge that mobile computing is the widest available form of computing, by users numbers, we know some also use the bigger “older” kind too, and use them together with their mobile devices to enhance operations. One such tool is fdroidcl, a command-line F-Droid desktop client that allows you to get the same apps controls, but from the comfort of your physical keyboard. Matthias Kirschner, of FSFE and former F-Droid Board member, tells us how he uses it for phone setups and upgrades. Get up to speed in this 10 minutes read. Conversations was updated to 2.20.4+free with minor UI fixes. The developer penned a post that made the rounds in the FLOSS and Android communities, as the app is now also free on the centralized app store. Why now? See the 5 minute read that might make you mad that developers are treated this way by faceless corporations and happy that you chose F-Droid. Jami launched their Jami Web client, no phone needed. OsmAnd~ was updated to 5.4.10 with a plethora of fixes polishing the 5.4 release. One important fix that the F-Droid contributors have pushed is OpenGL1 integration crashes as our first release was misbehaving on lower-end devices that can’t use the modern OpenGL2 rendered due to hardware constrains. Poker Payout was updated to 1.4.22 but with a new signing key. You’ve installed it last month? Tough luck, you need to uninstall then reinstall. SMSecure was updated to 1.4.0 adding search, better delivery reports, hiding phone numbers in the UI, updated translations and many more fixes. One important feature that might get Silence users up from the couch has been added, Import encrypted backups from a SilenceExport folder. While we kept Silence on a life line since its last 2019 version, by fixing arm64 compatibility, time will soon come for it to be archived as the app won’t be installable on future Android versions and the current notification issues are a pain for the users. Get testing! @CodeDoctor’s Dreamy Duskywing is here Butterfly was updated to 2.6.0: One of the biggest Butterfly updates yet brings: OneNote & Xournal++ support Canvas rotation Persistent document states Paints and presets for tools WebDAV remote encryption and backups UX improvements Tables Smarter file names for templates Better collaboration & embeds ⌨ More inputs & keybinds Performance improvements Read more here @shuvashish76 makes it modern: NewsBlur - News reader was updated to 15.0.5 adding better tablet support, faster scrolling, images controls, enhanced Add site and more. Rethink: DNS + Firewall + VPN, updated to v0.5.7, gets a new redesigned UI, stats, universal allow rules, smart DNS filters and more. @theimpulson peels onion layers: First thing, I have been working with people at Weblate to have a small plugin and library to allow updating translations without rebuilding and redistributing the Android apps. As the work is still alpha, feedback is appreciated. Join us at github.com/WeblateOrg/kotlin-sdk. The Tor Project muses back on how Tor VPN came to be, with Rust, per app tunnels, circumvention and more. Take an 8 minute break, read here. @TobiGr checks a resume: NewPipe is looking for two paid contractors: One Android developer with Kotlin and Jetpack Compose experience to help with the development of our new player library NewPlayer and the modernization of our codebase. There is also an open job an UI / UX expert to improve NewPipe’s user experience by doing an UX audit of the app. More information can be found on the website of NewPipe e.V., the non-profit organisation supporting NewPipe financially. Archived Apps 7 apps were archived APatch: The patching of Android kernel and Android system CaptureCap: Record and Stream Audio and/or Screen DobbyVPN: VPN client-side toolset. F-Droid Privileged Extension OTA: Services to allow F-Droid to securely install and update apps Human Benchmark: Test and compare your cognitive abilities with fun challenges T CrB Detector: T CrB Detector notifies the user when the star T CrB has exploded. TLSFragment: TLS fragmentation to bypass China’s Great Firewall. (Do try Lumine!) Newly Added Apps 299 apps were added (expand for the full list) Just three hundred? Included during these 4 weeks, and many more are waiting. Some already got updates too, but we’re listing new apps only once here. The review process is long, not only by the length of our backlog, but also to get a chance to work with the developers, to get things in perfect shape at inclusion time and for the long road ahead. NOTE: We are also tightening the rules for apps inclusion, review the docs here. More contributors raised to this challenge, offering their hands, eyes or tokens, each with their own abilities.

Developers were guided to fix the recipes, add metadata (pics, icons, description), fix reproducibility issues, fix crashes and possible issues raised by testing in emulators and on real devices. 0x56erify: Local, offline SHA-256/SHA-512 checksum verification. 5G Proxy Client: Routes device traffic through a remote SOCKS5 proxy via TUN. No root, TCP/UDP. AA-AuralListen Podcatcher: Private, ad-free podcast app – audio only, no account, all data on your phone AdaptKey: Privacy-first Android keyboard that learns your typing style. Fully offline. ADB Captain: Run ADB commands on your phone. No root, no PC — via Shizuku. AeroPayout: Become a pilot in 7 days — buy tickets, advance seats, earn real rewards Aftergleam - academic papers: A private reader for new research papers, ranked on your phone. Agenda Tech: Private offline calendar: encrypted, zero network, encrypted backups. Agendula: Tasks: A Material 3 Expressive task app with CalDAV sync. Airplane Scheduler: Turn airplane mode on and off on a schedule AlarmClock Deluxe (Wecker, Uhr, Timer, Stoppuhr): Alarm, clock, timer and stopwatch with advanced alarm tools AMARadio: Ad-Free - No Paywall - Just Radio Anchor Chain: Safe anchoring with phisycs Andropolis: Classic city building: an open-source Android port of Micropolis (SimCity). Animation Maker: A tool to convert image sequences into video files Anonomi Postbox: Self-hosted relay that holds Anonomi messages until you are back online API Flow: A focused mobile workspace for testing HTTP APIs APODroid: Sets NASA’s Astronomy Picture of the Day as your wallpaper, every day AppShelf: List of installed apps with sources — save, sync and restore on a new phone AppStow: Organize and launch apps, websites, web apps and deep links Aradia: LibriVox listener: Find, stream, and download free public-domain audiobooks. ARK-launcher: A modern, customizable home-screen launcher built with Jetpack Compose Auvae — growing close: 257 questions that bring people genuinely close. No account, no ads. - Taking F-Droid to IndiaFOSS (2026/10/02 00:00)
  This was the first time F-Droid had an official presence at IndiaFOSS, and I honestly did not know what to expect. We actually had quite a lot of people coming by. Most were students, and many had never heard of F-Droid before. That made it a different experience. A lot of the conversations started with the basics. What is F-Droid? Why would someone use it? How does it work? Can I put my app on it? Are there any subscription charges like apps on Play store? Some people stayed and talked for a while. Some came back later with friends. Quite a few came up just to say that they were glad F-Droid was there. That last part was probably the nicest surprise. People were also asking how they could help. We need that. F-Droid needs developers, but we also need testers and people willing to spend time using things, finding problems and reporting them properly. There was a lot of discussion about AI too: People were tired of AI being pushed into every app and every product. There was quite a bit of frustration about AI-generated code and what everyone calls “AI slop”. Some people asked whether F-Droid would have an AI policy and how applications or contributions that make heavy use of AI should be handled. Those are not simple questions. There is a difference between using AI as a tool and simply generating something that nobody has properly understood, tested or taken responsibility for. It was interesting to hear people asking these questions already. There seems to be a desire to get back to something a little more normal: build something, read the code, test it, fix it, talk to people and ship it. The Android conversations were interesting too: People asked about Google’s Android Developer Verification system, certified devices and what these changes could mean for developers distributing outside Google Play. We talked about LineageOS, GrapheneOS and /e/OS, and the different choices people are making around Android. Along came the Digital Markets Act. People wanted to know what the DMA and the European Commission’s work around Android might mean for alternative app stores, and whether all of these changes would make it harder for developers to distribute software independently. These were not really abstract policy discussions. People wanted to know what would happen to their apps, their devices and their ability to distribute software. F-Droid 2.0 was a regular topic. Several people came with issues and the missing download button on website, sometimes simply showing us what was happening on their phones. We also met a lot of people from other projects. Our booth was next to the XMPP folks, with Badri, Divya, Perry and the rest of the group. It was really nice being alongside them for the two days. I already knew quite a few people at IndiaFOSS, so the booth also became a place for old conversations to continue and new ones to start. There was a recurring reaction from people who discovered us: “Wow, F-Droid is here!” We even got invited to UbuntuCon to give a talk and several people told us that we should set up at MumbaiFOSS in October. There was

also quite a bit of interest in F-Droid's presence in India and Asia. Many people were happy to hear that someone from India is on the F-Droid Board, and that there are possibilities for F-Droid to do more in this part of the world. That was particularly nice for me. F-Droid is a global project, but there is a lot happening in India and across Asia that we can connect with. The first floor was probably the one thing that worked against us. Plenty of people simply did not come upstairs, so I am sure we missed a lot of potential visitors. The venue itself was big, but it was also hot. We were near one of the dome-like areas, and after standing there for two days, the heat certainly added to the tiredness. Bengaluru was another story. The food nearby was good, but the hotel room was very small and the local transport was not quite as friendly to our wallets. Some of the auto drivers seemed to realise very quickly that we were from another city, and the prices almost always reflected that. For my spouse, though, the whole experience seemed to be quite fun. She went to IndiaFOSS knowing little about F-Droid and ended up spending two days talking about it to complete strangers. She found the whole thing interesting, full of enthusiasm and fun. She even sold more merchandise than I did. She also watched me being interviewed by some college students. Apparently, I was quite good and honest in the interview. Her other observation was rather amusing. She said that my side of the FOSS and FLOSS world, if it were recorded properly and shown to our family members, would probably amaze them. It is apparently a very different world from the one they normally see. She also called me a "mini celebrity". Very mini, I should point out. We came back tired, with fewer stickers, less merchandise and a lot more conversations. And apparently, my spouse is now better at running an F-Droid booth than I am. I suppose I will have to remember that for the next one.

- F-Droid 2.0: A New Chapter for Android Freedom (2026/09/24 00:00)
  After more than a year of hard work, we are thrilled to announce the launch of F-Droid 2.0, a complete redesign of the official F-Droid app and the largest app update in 10 years. For more than a decade, F-Droid has helped people discover and install free and open source Android apps. F-Droid 2.0 builds on that foundation with a modern interface, better app discovery, improved search, and a simpler experience that works well, whether you're new to F-Droid or have been using it for years. This isn't just a visual refresh. The user experience was redesigned to integrate smoothly with current Android patterns, like Material Design, while keeping familiar F-Droid interactions in place. Key components were reworked and rewritten using Kotlin Compose, the standard toolkit these days, creating a foundation that will help us deliver improvements more quickly in the years ahead. We are excited to begin rolling out F-Droid 2.0 to users over the coming weeks after 14 test releases. What has changed? One of our main goals for F-Droid 2.0 was to make it easier to discover, install, and maintain the apps you rely on. We simplified the main navigation into three core areas: Discover, Search and My Apps. Categories are now integrated into Discover, making it easier to browse and explore, while My Apps provides a central place to manage installed apps, updates, and potential issues. Settings and Nearby Swap are still only a tap away from the top bar, but no longer compete for space in the main navigation. Discoverability improvements Helping people discover relevant free and open source software (FOSS) was one of the primary goals of F-Droid 2.0. As the F-Droid ecosystem has grown to thousands of applications, finding the right app has become increasingly challenging. The new release introduces improvements throughout the app from browsing and categories to search to make it easier to find software that matches your needs. And of course, F-Droid does this without tracking you, or trying to "engage" you to spend increasingly more time in the app. A redesigned Discover experience The new Discover screen helps uncover apps you might otherwise miss. In addition to highlighting newly added and recently updated apps, it now showcases the most downloaded apps in the repository. Whether you're new to F-Droid or looking for something different, Discover provides several ways to explore the growing ecosystem of free and open source Android applications. More useful categories Categories play an important role in helping users browse the repository, so we've expanded and refined them significantly, including more specialized categories that make it easier to find specific types of apps, such as

VPNs, firewalls, password managers, launches and navigation tools. Here is what you can expect: First, we've significantly expanded the category system. Instead of relying on a small number of broad categories, F-Droid now includes many more specialized categories, helping you get closer to the kind of app you want in just a few taps, even before you start searching. Second, to make this expanded category system easier to navigate, we've introduced higher-level "meta" categories in the Discover screen. These group related categories together and provide a more approachable entry point for browsing the growing F-Droid ecosystem. Finally, categories now play a larger role throughout the app. Their names and descriptions are used to improve app discovery and help guide users toward relevant free and open source applications. As an example of this effort, we've completely reworked the Games category. Rather than grouping all games together, F-Droid 2.0 now distinguishes between 17 different game genres, making it much easier to find the kinds of games you actually enjoy playing. Search that understands what you're looking for Search has also been significantly improved. In addition to app names, it can now search app descriptions, categories, and translated content. This makes it easier to find apps based on what they do rather than what they're called. We've also made major improvements for users searching in Chinese, Japanese, and Korean. The new search system provides much better support for CJK writing systems, helping users find relevant apps more reliably in their own language. Search also remembers your recent queries, allowing you to quickly return to previous searches without having to type them again. Powerful filtering, made approachable Browsing and searching are only part of the story. F-Droid 2.0 also introduces powerful filtering options that help you narrow down large lists of apps to exactly what you're looking for. Filters can be combined using multiple criteria, such as app category, device compatibility, or anti-features. For example, you can choose to view only Action Games that are compatible with your device and exclude apps that depend on non-free network services. To help users discover these and other advanced capabilities, F-Droid 2.0 introduces onboarding screens throughout the app. Rather than hiding features behind complex settings, the app provides contextual guidance to help both new and experienced users get the most out of F-Droid. Smooth installation experience wherever F-Droid runs For the longest time, the experience of clicking install or update was forced to be second rate by Android. Now, thanks largely to pressure from the EU's Digital Markets Act (DMA) and anti-trust actions around the world, Android offers all app stores an option for a smoother and more automatic install and update experience than before. F-Droid 2.0 includes groundbreaking work on utilizing these new abilities. This allows F-Droid to use a unified installer for all F-Droid installs, whether built into the OS or you installed it on your device yourself. The unified installer makes use of the new pre-approval API, so that on supported devices the user can confirm right after deciding to install the app, instead of after the app was downloaded. That brings the F-Droid install experience on official Android devices much closer to what the built-in app store can provide. What moved, and what was removed A redesign of this size means making careful decisions about what belongs in the new app, what can be handled differently, and what no longer makes sense to carry forward. Some familiar features have changed, moved, or been removed as part of making F-Droid 2.0 more streamlined and easier to maintain, without sacrificing core functionality or features users rely on. Update checks now happen automatically F-Droid 2.0 now fetches and installs app updates by default. If you prefer more control, no worries, your existing preferences are still respected. Some users missed the pull-to-refresh gesture for checking all repositories for updates. In F-Droid 2.0, the pulling gesture is exclusively for scrolling. This is now possible because the app can now automatically check for updates in the background. Rather than preserving a familiar action, we focused on removing the need for it. The best refresh button is the one you never have to press. Users who want more control still have fine-grained and manual update options available. If you used pull-to-refresh to manually trigger updates, that is now available under the action overflow menu, e.g. the "three dots", on the My Apps screen. Data usage settings F-Droid gives you control of what get's downloaded when. This helps fit our diverse users around the world, who have varying requirements. Many users have

cheap access to mobile data, while mobile data is prohibitively expensive for others. Some users have heightened privacy requirements, so they need to control their network traffic. While others are using limited devices which bog down when F-Droid updates in the background. The settings which control all this were reworked to make adapting F-Droid to your needs more intuitive. Privacy and security features Some F-Droid users operate in environments where simply having certain apps installed or even using F-Droid can attract unwanted attention. To help support these users, F-Droid has long included a set of privacy and security features designed to protect both the user and their data. One key privacy tool is Tor, and F-Droid has long supported using Tor for all network connections, and using Tor Onion Services for repositories and mirrors. The landscape of how Tor is integrated into Android has changed quite a bit since Tor support was first integrated. Now there is TorVPN, Orbot, TorServices and more. We took this opportunity to simplify the settings and remove the auto-detection that was no longer reliable. If you enabled “Use Tor”, that will be migrated to generic Proxy Settings. Going forward, Tor VPN is the recommended approach for easy Tor support, and the Proxy Settings are still available for those who need manual control. Another key part is the set of “panic” features, which allow users to quickly remove some specific kinds of sensitive information from their device in emergency situations. These features are still included in F-Droid 2.0 and remain an important part of supporting users with elevated security needs. Notably, the F-Droid app hiding feature has been simplified, to give users an accurate idea of the kind of protection they can expect. F-Droid was one of the first apps that began providing app hiding features to protect user privacy, including our “panic” feature which disguised the F-Droid app as a simple calculator app. This simple feature was requested by many users, and since then Orbot, TorVPN, Signal and others have added such masking features. Over time, a standard design has emerged across widely used apps, and we have adopted this design in the new release as well. This feature is designed so that users can better understand the limits of the disguise. Instead of the mask looking and functioning as a simple calculator app, now the mask only affects the app icon, name and nothing else. This informs users that the F-Droid app will still appear in the “Apps” settings and would be detectable during forensic inspection. This change will hopefully make it easier for users to understand the limits of this feature, while still utilizing it when needed. One feature that has not yet returned is the ability to remove and wipe apps as a response to a panic trigger app like Ripple. We recognize that some users rely on this functionality for privacy and personal safety reasons and understand it is more than a usability feature. However, it requires highly specialized work to maintain, and given the small user base, we felt it should no longer block so many other important improvements. The app-wiping feature remains an important feature. We would especially welcome feedback from people who use it, to help us understand how and when it is used, so we can evaluate the best path forward as we continue improving F-Droid 2.0. Users who rely on the current app-wiping implementation may opt to postpone updating to F-Droid 2.0 while we evaluate bringing the feature back. For Android versions that integrate F-Droid F-Droid is designed to be integrated into any version of Android or AOSP, as we can see in CalyxOS, emteriaOS, iodéOS, Lineage-for-microG and ShiftOS. Each OS can include their own repositories by default using the “additional repos” mechanism. If you use one of these OSes, these will be visible in your Repositories overview. For additional info on what changed, check out this blog post. Also, F-Droid Privileged Extension (FPE) is not currently supported by 2.0. That means even if FPE is installed, F-Droid 2.0 won’t use it. This overhaul focused on full featured support for the Android “session” installer. That lets F-Droid run background updates on any recent Android version without requiring FPE. Like with any of the changes here, we welcome feedback. Lowering the barrier for contributors While many of the improvements in F-Droid 2.0 are visible on the surface, some of the most important changes happened behind the scenes. All new code in this effort uses modern Android code standards and designs. This gives us a codebase that is easier to maintain, test, and easier to extend with new features in the future. One of the goals of the rewrite was to lower the barrier for new contributors. Android development has changed

significantly over the past decade, and F-Droid 2.0 is now built using Kotlin, the language that has become the standard for modern Android development. This makes it easier for developers familiar with today's Android ecosystem to contribute to the project. The new user interface is built with Jetpack Compose, the standard toolkit for Android applications. Beyond simplifying development, this helped us align F-Droid more closely with Material Design, the design system used throughout Android. As a result, F-Droid feels more familiar to Android users while remaining true to its own identity and values. Most importantly, these changes provide a foundation for the next decade of F-Droid development. By reducing maintenance burden and making contributions easier, we can spend more time improving the experience for users and less time fighting technical debt. Some new tools also depend on fixes in Android itself, one such fix was added in Android 7 forcing us to drop support for Android 6. As always, old F-Droid releases will continue to work on old Android versions. A community effort F-Droid 2.0 is one of the largest and most ambitious projects in our history. Bringing it to life required much more than software development. It involved user research, design, testing, documentation, community feedback, quality assurance, lots of new code, a security audit and countless discussions about how F-Droid should evolve over the next decade. This work was made possible by the support of many organizations and individuals. Torsten Grote's development work on the new app was funded by NLnet through the Mobifree fund. The Open Technology Fund's User Experience & Discovery Lab supported user research and design work, bringing in Ura Design to help conduct user testing, develop user stories, and refine our Human Interface Guidelines. Additional support came from the Open Technology Fund's Free and Open Source Software (FOSS) Sustainability Fund, NGI, Mobifree, and the Calyx Institute, whose sponsorship helps support the ongoing maintenance and long-term sustainability of the F-Droid ecosystem. As part of this effort, the Open Technology Fund's Security Lab in conjunction with Convocation conducted an independent security review of F-Droid 2.0. We analysed and addressed all findings relevant to the new application, helping ensure that the release meets the high security standards our users expect. We look forward to sharing the full audit report once it has been cleared for publication. Just as importantly, F-Droid 2.0 reflects the contributions of many volunteers. Community members contributed code, testing, bug reports, design feedback, translations, documentation, UX discussions, and countless ideas throughout the redesign process. Both long-time contributors and people making their first contribution helped shape the final result. Finally, this work would not have been possible without your support. Donations help fund many of the less visible but essential activities that grants don't always cover, including community management, handling the issue backlog, quality assurance, release management, and project coordination. These contributions help keep F-Droid healthy long after a specific grant-funded project has ended. The journey continues F-Droid 2.0 represents a major milestone, but it is not the end of the story. Rebuilding the app has given us a stronger foundation, yet there is still plenty of work ahead. As the rollout reaches more users, we expect to learn a great deal from real-world usage. Community feedback has shaped F-Droid 2.0 from its earliest design discussions through many alpha and RC releases, and it will continue to guide future improvements. Some ideas did not make it into the initial release, while other features are still evolving as we gather feedback and refine their design. In the coming months, we will continue improving performance, accessibility, app discovery, and overall usability. We'll also keep listening to users as they adapt to the new experience and help us identify opportunities for further improvement. Like every major F-Droid release before it, version 2.0 is not a destination, it's the beginning of the next chapter. The future of Nearby One area that continues to evolve is Nearby, the feature that allows users to share apps directly between devices without relying on a central server. The broader F-Droid 2.0 redesign gave us an opportunity to rethink Nearby from the ground up. We have been working on a new implementation based on improved connection methods that should make sharing apps more reliable and easier to use. This work is not quite ready for inclusion in the initial F-Droid 2.0 release, but development is actively underway and the foundations are already in place. If Nearby sharing is important to

you, now is an excellent time to get involved. Community feedback and testing can help shape the next generation of the feature before it reaches a wider audience. How you can help F-Droid 2.0 is the result of thousands of hours of work from developers, designers, testers, translators, donors, and community members around the world. Now that it is reaching users, we'd love your help making it even better. If you're receiving the update, take some time to explore the new experience and let us know what you think. Whether you've found a bug, have an idea for an improvement, or simply want to tell us what works well, your feedback helps guide future development. If you'd like to get more involved, there are many ways to contribute. Help us test, translate and review You can help test upcoming features, improve translations and documentation, review issues, contribute code, or join discussions about the future of the project. New contributors are always welcome. Consider donating to F-Droid And if you're able, please consider supporting F-Droid financially. Donations through Liberapay or OpenCollective help fund the ongoing work that keeps the project healthy between major releases, from infrastructure and quality assurance to community support and project coordination. F-Droid 2.0 is a major milestone, but the work continues. Thank you for helping us build a free, open, and sustainable app ecosystem for Android.

- There's always a path (2026/09/18 00:00)
  This Week in F-Droid TWIF curated on Friday, 18 Sep 2026, Week 38 F-Droid core Thanks to @linsui, we've unlocked a new way to add developer signed packages to apps for which we already provide packages signed by us. Historically, we've had two ways to setup reproducible builds. The first way, we host only the upstream package after we verify it to be reproducible. The second way, we get the signature of an upstream package, combine it with our locally built package and if they verify reproducibility, we host both our signed package and the upstream one. The first path works better when the app is freshly included in F-Droid, so all new installs get the same package. But if we want to switch from the F-Droid version to the upstream signed one via this method, users need to backup, uninstall, reinstall and restore. We regularly announce such switches in these weekly posts. The second path allows us to add the upstream package alongside our own, so new users get the new upstream signed one and old users get updates from us as usual. No uninstall, no backups, nothing changes. One issue is that for each new version somebody needs to extract the signature and open a merge request, no metadata autoupdate available (for now, help welcomed!). The new third path - announced on this post - is a combination of the above two. It adds the upstream signed package alongside ours, like the second path above, but we use it directly. There is no need to extract signatures and metadata auto-updates are available. We keep the upstream package intact, since it needs to verify reproducibility, but we modify our own package with a lower versionCode so they don't conflict. Packages that are setup like this today: Catima Conversations since this week with update 2.20.3+free Shattered Pixel Dungeon since this week with update 4.0.0 (Huge update by the way, see the developer post) Taler Wallet since a month ago, updated to 1.6.8 this week This is not all perfect yet unfortunately as this method kinda "hacks" our metadata structure. We are tracking an issue about the way the preferred first installs are offered. The first two methods prioritize upstream packages, this one needs a fix to do so. For now, we can guide users that want to install these apps for the first time to expand Versions in F-Droid client and install the top most version that is compatible with their devices even if the "suggested" label points to a lower versionCode until we fix it. Community News Librera Reader was updated to 9.6.17-fdroid and if the previous update made the app crash we've now fixed our build recipe. This version also brings an updated UI design. Archived Apps 2 apps were archived duckAssist: Lightweight, privacy-focused WebView wrapper for Duck.ai (App will come back under a new appID) NoProvider2Push: UP-distributor without provider Newly Added Apps 46 apps were newly added 508.dev Soundboard: Mix looping ambient sounds, each at its own volume. Offline, free, no ads. Abstract Dots and Lines: Abstract Dots and Lines is a libre implementation of a pen-and-paper game. Autometer: Track fuel

economy and vehicle maintenance schedules BoatSpeedy: GPS speedometer and waterway navigation for boats, with battery analytics Cambium: NIP-55 signer that holds no keys: signing is proxied to a NIP-46 hardware bunker CipherNotes: Notes. Encrypted. Local. Nothing more. CloudSound - SoundCloud facilitator for Podcini.A: A service app providing SoundCloud contents to Podcini.A Custom Routes: Mark custom climbing routes on gym photos and export shareable images. DBase Downloader: Download video and music from 1,750+ sites with yt-dlp and FFmpeg DeltaSync: Encrypted KeePass sync — requires your own self-hosted server. Duper: Remotely ring or locate your phone via SMS, no internet needed. DuressUltimate: Duress Password trigger via length with ultimate protection Fairy Mahjong: Clear a layered garden board with a four-slot matching hand GPA Whiz: Offline academic tracker: GPA, CGPA, timetable, and scholarship deadlines How2Vote: See how parties' real parliamentary voting records compare with your views. Husk: Turn a spare device into a remote camera and control rig Janken (Rock Paper Scissors): Modern offline Rock Paper Scissors with private Pass & Play, Bot AI and RPSLS. Kasette: Offline music player. Import local files, no accounts, no servers. KFZ-A: Offline lookup of Austrian vehicle registration identifiers KFZ-D: Offline lookup of German vehicle registration identifiers Lens HRV: Measure heart-rate variability with your phone camera, no extra sensors LocReminder: An alarm that rings when you arrive, not at a set time. Lplanner: Mixed-gas decompression planner: ZHL-16C, VVAL-79 and VPM-B. Works offline. Ludo: Multiplayer Board Game Magpie: Tamper-evident incident journal with encrypted, self-proving exports Message487: Forward notifications and SMS to n8n or your own webhook Nonius: Eight measuring instruments. No ads, no trackers, no network. Notes Tech: Encrypted Markdown notes, 100% local. No Internet permission. OnStop2FinishAndRemoveTask: If change other app, Auto close task in prev app. Required Shizuku APP. Open TeleScope VR: A VR-based digital telescope camera application for people with low vision Orion Master: Native 1oom port of Master of Orion (1993). Requires your own LBX files PanOSP: Lightweight, configurable AOSP-style quick settings panel PeerPop - PeerTube facilitator for Podcini.A: A service app providing PeerTube contents to Podcini.A Pocket Prose: A writing app for a folder of Markdown notes, filed by tag. Pulse: Plan your own weekly workouts and keep every exercise offline ReadBear: A cute&chill CBZ, PDF, EPUB reader that's ridiculously configurable! ReminDiary: Offline daily journal that surfaces what you wrote this day in past years Rowtine: Knitting and crochet companion: patterns, stash, counters. Offline. Sherpr: Drive your Herdr AI-agent fleet from your phone, over SSH — no cloud Shikaku: A minimalist block logic puzzle game Simple File Manager: No bloat simple file manager Tents: A logic puzzle game where goal is to place tents in the grid UnlicenseLauncher: Simple and secure FOSS launcher with fully FREE license Wind Bubble: See where the wind hits you, on top of your navigation app. WM Keyboard: A private, offline keyboard: 350+ languages, smart typing, themes, and tools. Zaelio: Offline tracker for custom sessions and measurements Updated Apps 418 more apps were updated (expand for the full list) 3X-UI Manager was updated to 0.14.3 Accelerrace was updated to 0.12 Activity Trace was updated to 0.10.0 ActivityWatch was updated to 0.14.1 Adaptive Theme was updated to 2.5.1 AirGuard - AirTag protection was updated to 3.1.2 AirLyrics was updated to 1.2.5 AliasVault was updated to 0.30.7 Amber was updated to 6.6.4 Andor's Trail was updated to 0.8.18 Android IP Camera was updated to 0.13.0 AniHyou - AniList client was updated to 1.6.1 Anti-Vocale was updated to 1.12.1 Arcanum was updated to 1.6 Aria for Misskey was updated to 1.5.13 Arrow Escape: Infinite Puzzle was updated to 1.0.9 Atmo Engine was updated to 7.2.3 Atrium was updated to 1.6.1 Auto Auto-Rotate was updated to 1.2.3 AutoPie was updated to 0.18.3-beta Autu Mandu was updated to 6.1.0 Aves Libre was updated to 1.15.3 Bag: Bitcoin Portfolio Monitor was updated to 1.3.4 Balance was updated to 1.12.1 Baly Groceries Tracker was updated to 1.1.5 Bangle.js Gadgetbridge was updated to 0.94.0-banglejs baresip was updated to 91.0.0 baresip+ was updated to 80.0.0 BasicSync was updated to 3.17 Bati: Fitness RPG was updated to 2.4.0 BayesianBahn was updated to 0.4.0 Be nice was updated to 2.3.0 BeatBridge: Bluetooth Music was updated to 1.0.61 Binary Eye was updated to 1.75.4 BinClockWidget was updated to 1.1.1 BlockDrop: Block Puzzle was updated to 1.0.57

You are welcome to join the TWIF forum thread. If you have any news from the community, post it there, maybe it will be featured next week To help support F-Droid, please check out the donation page and contribute what you can.

- Routing you to FLOSS (2026/09/11 00:00)
  This Week in F-Droid TWIF curated on Friday, 11 Sep 2026, Week 37 Community News Our fight with categories has been long and fruitful, more were added, soon more will be removed, perfection needs shuffling apps around in the hopes users find it easier to locate good apps that fulfill their needs. Thanks to @linsui for aggregating the metadata and taking time to hunt appropriate apps. The new categories are: Emergency Action - for your device, for your person, for your friends and family Medication - you need to take it, let's make it as seamless and as easy as possible Speech Recognizer - put those fingers to rest Text Encryption - in a bottle, with a pigeon or via magic electric packets over the wire, they need to be private CoMaps - Hike, Bike, Drive Offline with Privacy was updated to 2026.08.31-14-FDroid with some nice changes. One innovative new feature, that FLOSS maps users have been asking for year by now, is the integration of Mangrove user reviews for points of interest. For now they can only be seen, there's work in progress to add edit options too. You can take a sneak peak on how many of these are in your area, using this page (zoom it). Also TIL: MapComplete has a way to view/edit reviews. The more the merrier! Joplin was updated to a new major version, 3.7.8. The changelog looks enticing, so make sure both your server and app are updated in order to enjoy the enhancements. Of note, the server has an integrated MCP server that allows your notes to be processed by… you know what, if you wish so. LocalSend Kotlin, An unofficial, lightweight Kotlin LocalSend client for older devices, is now in F-Droid. LocalSend is a great app for transfers between many devices, it's written in Flutter and supports Android 7 and later. But at 46Mb it's rather hefty, and maybe you need transfers to/from your older devices too. Here is where the new Kotlin app shines, it's lightweight in size, 10 times smaller (no joke), but still allows fast & secure transfers, and it supports Android 5 and 6 too. Monica F-Droid, Open-source password manager: local encryption, autofill, TOTP, Passkey, was just added. We have more than 60 apps in the Password & 2FA category, but while AIPOS Password Manager, updated to 1.2.2 this week, and PassVault could import Bitwarden data, this new app is the first one that can also sync that data (with self-hosted Vaultwarden instances) too. OsmAnd~ was updated to 5.4.4 with a huge update. Just read the release post to get the full view on what's new. My favorite fix: "Fixed navigation incorrectly ending after switching to another app and returning to OsmAnd", wow, that was really annoying. For our Magyar users, it appears that your map issue has been fixed, do test! NOTE: The cleaning procedure for OSMAnd~ publishing is extensive, we don't immediately push new updates to everyone, so brave users get a chance to drive it around and report any issues. If you want to install it now, you can go to the app page in F-Droid client, expand Versions and manually update or enable "Allow beta" in the upper right menu. We know that OSMAnd~ while being feature full it's also very heavy resource wise, we have more OpenStreetMap based maps apps, like CoMaps above and Organic Maps Offline Map & GPS, updated to 2026.08.27-18-FDroid this week, and you might find them better for your use case/device. SimpleX Chat was updated to 7.0.2 and missed last week was the announcement of the start of their crowdfunding campaign. Do read how to get a stake in SimpleX and a testimonial from an early investor. Also, don't forget to bookmark the September 15 livestream event and the December 12 domains countdown. Sky Map was updated to 2.0.3:Apollo with a full rewrite. Many things have changed and this opens the path for better development and nicer features. If Sky Map seems too simple for your view of the Universe, Celestia was updated to 26.8.1 and brings you the full 3D experience of Space. Taler Wallet was updated to 1.6.7 with important security fixes, so make sure you update soon. Tsacdop - Podcast Player was updated to 1.0.2 after a five year

pause, welcome back! @shuvashish76 digs deep into the kernel: AnkiDroid: Flashcards was updated to 2.24.1 fixing some security issues and more, do update as soon as possible. If your friends use some other centralized store, make sure they update too, or if they can't (update not available, or… app gone) then do guide them to get the app from F-Droid. App Manager was updated to 4.1.1, adding an interesting feature "Revoke Internet Permission via eBPF". You need to read the news about how that works and its limitations. Our Firewall category has more than twenty apps, yet not everyone can use their local VPN method, so any new tricks might help. As usual, keep in mind that apps might use other ways to get access to or info from the Internet, like using other apps (Google Services, UnifiedPush provider, etc) so don't be surprised when this happens. If we talk about centralized stores, Fedilab was updated to 3.43.3 with fixes. What's more noteworthy is that F-Droid is now the only place for users to get the app, as the other store asked the dev to censorship competing services and more awful things. The backup and restore process to switch to F-Droid is easy, so get started and announce your Fedi friends too! Notifications worry you? We have plenty of UnifiedPush apps that will take care of that. @sidhant947 leaves us puzzled: Puzzle Games was updated to 2.0.1 summing more than 300 games over 6 cognitive domains. Solving puzzles appears to be a very healthy way not only to pass time, but also help maintain your brain at any age. And it beats doomscrolling any day! Archived Apps The last two Covid apps were archived Contact Diary: Keep track of the people you have recently been with Lucia App: Lucia allows you to anonymously check in at events using QR code based tracing. Newly Added Apps 62 more apps were newly added 0x54ask: Todo.txt manager. Offline, works with Syncthing. Fork of SimpleTask Cloudless Adaptive Theme: Auto-switch dark theme & wallpapers using the ambient light sensor AquarellNotes: Calm local notes and shopping lists with watercolor-inspired design Assistive Menu Tool: Floating accessibility button with quick system actions Aster Mail: Encrypted Email: Private email app with end-to-end encryption, aliases, and custom domains AstroClock: Astronomically correct 24-hour clock: the Sun is the hand, the star sky turns AudioLex: Hearing training for word recognition: listen, identify, repeat. Fully offline. Balance: Private offline bank balance dashboard BlowTorch 2: MUD client with triggers, aliases, timers, and Lua plugins BookStash: A private, offline-first reader and library for web fiction and books. Bubble Shooter: A modern 2D bubble shooter puzzle game Car Coop: Self-hosted car sharing companion for bookings, trips, expenses, and messages. Chogan: Offline game collection: tower defence, sudoku, minesweeper, dots. Circadian Display: Adaptive screen warmth and dimming curves for better evening comfort and sleep. Contextium: Configurable context menu helper Crate: Catalogue your physical media collection — stored on your own Nextcloud. CypherLeaf: Private, offline notes with folders, tags, and a lock for sensitive entries. Dosezy: Simple medicine tracker & reminders. Enter details, we'll handle the rest. Duetto: A permanent voice and video channel for two people, on your own server. EXIF Remove - Strip, Randomize & View Metadata: Remove or scramble photo metadata before sharing, with configurable templates Flashbyte: A fast cross-platform file sharing app. Flybook: Private offline flight logbook for aviation enthusiasts Foggy Maps: A personal exploration map where fog dissipates where you have walked. GymMane: Dark, offline gym log. Tap the muscle, log your sets, watch your numbers move. Hazel: Download video and audio from over 1000 sites, powered by yt-dlp. HostLookup: Explore DNS records and network information across public resolvers Hue Sort: A color sorting puzzle game. Swap tiles to reconstruct the hidden gradient. IMD - It's My Device (supercharged fork of Geto): Settings manager/ hide settings from apps Jotdown: Offline PDF reader with OCR and academic annotations. Learn Math: A modern, fast, and tactile mental math training game L×Box: VPN client: 12+ protocols, subscriptions, app routing, balancing, traffic stats Markdown Reader — PilcrowMD: Read & edit Markdown beautifully. Marmalade TTS: Fast, natural, private text-to-speech for your whole phone. Works offline. Math Clock: Widget, which shows the time in German words based on fractions Meron: Mail app that sparks joy Messages: Simple, private SMS messaging. Offline-first, no ads, no tracking. Night Light: Minimal OLED night light, flash or screen, settings, 26 languages. Polished Recognition: Voice input for any keyboard — transcribe with your own

API endpoints RZR: Beautifully made mobile code and markdown reader. Salmon: An open-source guitar tuner that just works Salmon Tracker: Track official Alaska salmon counts and receive local update alerts Schussel: Bluetooth-triggered checklists that remind you of what you forgot. Screw Jam: Unscrew plates, match colors with active toolboxes Slate: Minimal customisable launcher. A blank slate where your apps go anywhere. SlimBook: Clean, ad-free Facebook feed with real-time content filtering Slooop: Imageboard client Tangram: Make or solve Tangram puzzles Telegram X FOSS: An unofficial FOSS-friendly fork of Telegram X textlog: A text-first mobile client for textlog.cc — no algorithm, no metrics, no ads The Last Carrot: A cheerful tower defence game with no ads, no trackers and no permissions Title Track: A recorder for music memos. Tjoeke: Quick Dutch train departures for your daily route Triple Match: A minimal, open-source 3D tile-matching puzzle game. Tumblr Downloader: Download images and videos from Tumblr posts Umihi Music: A simple Material YouTube Music player UnscopeMyData: Sync protected folders to public storage using Shizuku. Veto: Open source, native VirusTotal client. Scan files, links and apps in style. Victoria Launcher: A minimal, list-based home screen and open source Niagara Launcher alternative Yahora: One tap records that something happened. - Searching complexity and Taler update (2026/09/01 00:00)
  This Week in F-Droid TWIF curated on Tuesday, 01 Sep 2026, Week 36 F-Droid core F-Droid and F-Droid Basic were updated to 2.0-rc1 with a fixes focused changelog. After our last TWIF we've sneakily promoted 2.0-rc0 as suggested for Basic updating all its users to our latest code. This made users happy to experience our improved app and made us happy to receive more crashes and issues reports. Having more people to test the UX and more devices/Android combinations to run the app help F-Droid get better. Search has been one area that was greatly improved, with a better UX, better filtering and great results that pull info from categories and app data. So imagine our surprise when the user feedback was "search results make no sense" or worse "I get no results at all". We've posted a few days ago two test queries to exemplify how search should look. If you've updated to latest 2.0-rc1 and you don't see any results, we are tracking this issue here. We've rarely seen random or unrelated search results in our testing before, and a fix was deployed for such cases, a database cleaning procedure that should run by itself daily, if necessary. The challenge for us now is to find out why some Android devices don't run the fix, and we are gathering info in this issue. If you encounter any of these or any other problem, make sure you add your device info (model and Android version) to the existing open issues or to new ones. If Gitlab is grumpy and you can't, you can still ping us on Fedi, Forum or anywhere else. As part of our NLnet-funded GNU Taler project, we've completed a deliverable: exploring and implementing Taler support in the F-Droid client. App developers can try this now by getting an account for receiving Taler-based donations and publishing their Taler donation link in app metadata. Community News Catima — Loyalty Card Wallet was updated to 2.45.0 (F-Droid) and its dev, TheLastProject, wanted to add some news: Catima 2.45.0 was released with Wear OS support (and switched to Reproducible Build on F-Droid). This marks the first time a Wear OS application is released to F-Droid. Although Wear OS is a proprietary platform with no FOSS custom ROMs like Lineage and the likes available for it, it is based on Android and therefore you can basically write apps for it the same way you do for Android. While there is no F-Droid client which supports Wear OS at this point, you can install the Wear OS Catima companion app from F-Droid (v1.0.0 Wear OS), enjoying the same general F-Droid confirmation that the app really is FOSS. Alternatively, if you have a smartphone that's supported by Gadgetbridge, you can use Gadgetbridge support in Catima, which has existed since 2013 and is much more private than Wear OS is: Loyalty cards / passes. For those curious about writing Wear OS apps without proprietary Google libraries, see our documentation. Do you use Wear OS and how do you currently find FOSS apps for it and how do you install them? Let us know! NOTE: Based on the lower versionCode of the Wear app, it will end up in the Archive repo at some point Daniel Gultsch, the developer of Conversations has posted a 15 minute piece that's worth a read, about digital independence and what 25 years of XMPP brings us. While we can hear echoes that very much define F-Droid too, like self-hosting, decentralization and federation, we have yet to dream of an IETF standard for "app distribution". But if that time comes, will we have your vote? GPSTest was updated to 3.10.6 after more than one and a half years. The changes are meant to maintain the app running in tip top shape. Status - Chat, Wallet, Browser, Privacy super app with messenger, crypto wallet, browser, communities & more, was just added. Does the name seem familiar? It should, this is the brand new version of the app, a total rewrite as a separate app. You can read the introduction and migration post, and yes, you saw that date right, we've been collaborating with the

developer since January to bring this app to F-Droid, and built reproducible! Since the old version a lot has changed, more than we could cover here, so do a deep-dive in past posts to get yourself up to date. @ROllerozxa jumps on voxels to bring us the news: Luanti was updated to 5.17.0 and users are advised to update immediately as it fixes security vulnerabilities affecting both the client and server. You can read the change-log here. Also please make sure your friends and game peers also update, specially users that have the app installed from other centralized stores, as we heard rumors not only that the update is not available there but that the app was outright removed on baseless accusations. Did anyone mumble “keep android open“? Archived Apps 2 apps were archived My Brain: Productivity app for Tasks, Notes, Calendar, Diary, Bookmarks and more (App will include proprietary libs) NotallyX - Quick Notes/Tasks: A simple and minimalistic open source notes app (Developer wants to find and fix crashes, will come back soon) Newly Added Apps 104 more apps were newly added Being busy with daily updates, fixes, reports, upstream feedback, client 2.0 development and more, did slow down our rate of new apps inclusion. Yes, the backlog is huge, but we thank the contributors helping to review and the developers for having patience with us. 500 - Multiplayer card game: Play 500, the Australian trick-taking card game — bots or friends online. 5G Proxy Pro: Share your phone’s 5G/4G over Wi-Fi via SOCKS5 proxy. No root, TCP/UDP, LAN-only Adiresy: Find, share and navigate to Madagascar’s community address codes Ambio: Focus Timer & Sounds: Blend up to 3 of 12 ambient sounds into a focus soundscape you build yourself Argus: Natural-language automation compiled by an LLM, run by a deterministic engine. auth’s RNG: roll for rarities, sell them, buy upgrades. an incremental RNG game. AutoPie: Swiss Army Knife For Linux on Android Automation. Backgammon Clock: A flexible two-player backgammon match clock and scorekeeper. Baly Groceries Tracker: monitor stock levels, and never worry about running out Bati — Fitness RPG: Turn workouts into quests, boss fights and a village built by your training. BayesianBahn: Empirical arrival-time distributions for Deutsche Bahn trains Bike Radar: Overlay and audio alerts for BLE bike radars. Offline, no account, no cloud. Boardgame Pal: Dice, score counter, starting-player draw & more – 100% free and ad-free! Bubble Penetration: Fast arcade action: collect colors, chain combos, beat the highscore. Bugbane Beta: Beta channel of Bugbane, a guided forensic self-triage tool Cairn: Health Aggregator: Aggregate your health data into open files in your own Nextcloud Chat Room: Real-time messaging client with text and file sharing. Clear SMS: Privacy-first SMS app with smart inbox, finance dashboard and bill reminders Croustillapp: Access menus, addresses, and contact info for nearly 1,000 CROUS restaurants. DAVY - Daika Anime Viewer because YOLO: Lightweight, open-source anime player for Android TV. Debate Timer: A minimalist timer, so you can focus on speaking. You are welcome to join the TWIF forum thread. If you have any news from the community, post it there, maybe it will be featured next week To help support F-Droid, please check out the donation page and contribute what you can.

- F-Droid goes FrOSCon (2026/08/31 00:00)
  FrOSCon 2026 in Sankt Augustin, Germany, was a first for F-Droid as well as for me. It was the first time F-Droid had a booth at FrOSCon, and it was also my first FrOSCon and my first time in Germany. Getting to spend the weekend representing F-Droid there with Sebastian made it

particularly special. Our booth was in a very good spot, between FlorisBoard and Phosh, with Ubuntu Touch nearby and Fedora directly opposite us. We also had postmarketOS nearby. It made for a lively part of the exhibition, with plenty of people moving between the different projects. The people around were especially lovely and were friendly, helpful and easy to talk to, which made the long, very hot days at the booth much easier. FrOSCon has a strong hardware presence, and there was plenty to see across the exhibition. The Phosh & postmarketOS team were showing their operating systems on different devices, including demonstrations involving Waydroid and Android applications. It was nice having projects working on different parts of the free software mobile ecosystem so close together. At the F-Droid booth, Sebastian and I spent most of the weekend talking to users. Many visitors were already using F-Droid and came by to share their experiences or ask questions. Others were completely new to F-Droid, and we were able to help them get started. We came away with a good number of new users, which was one of the most satisfying parts of the weekend. F-Droid 2.0 was a frequent topic. Several people came with questions or issues they had encountered, sometimes simply showing us what was happening on their phones. Android Developer Verification also generated a lot of discussion, with visitors interested in what it could mean for F-Droid and the future of app distribution on Android. There was also a surprising amount of curiosity about what happens behind the app. People asked how F-Droid is managed, how we find the resources to keep the project running and how the project is funded. These conversations were particularly useful because they gave us an opportunity to explain some of the work that is less visible to users. We did not receive donations directly at the booth, but we noticed generous donations arrive through OpenCollective around the time of FrOSCon. While we cannot attribute them with certainty, the timing and the conversations at the event make us confident that FrOSCon helped. One thing I noticed compared with FOSDEM earlier this year was that FrOSCon gave us more time with individual visitors. FOSDEM has a much larger crowd, but at FrOSCon people could stop for longer and have a proper conversation. For a project like F-Droid, those conversations are valuable. The heat certainly made the weekend memorable too. It was unusually hot in the region, including at the venue, but the people around us made it considerably easier to get through. By the end of the weekend, we had met existing F-Droid users, introduced the project to new ones, had some very useful conversations about where F-Droid is heading, and spent a great couple of days with the wider free software community. Thank you to everyone who stopped by the F-Droid booth, asked a question, shared an experience, or simply came over to say hello. Finally, thank you to the FrOSCon organisers and everyone around us who made F-Droid’s first FrOSCon such a good one.

- It takes two, to update (2026/08/14 00:00)
  This Week in F-Droid TWIF curated on Friday, 14 Aug 2026, Week 33 Community News ArcaneChat was updated to 2.58.1 but only for armeabi-v7a and x86_64. Network glitches made the other 2 arches fail, and we are rebuilding them as we speak. Aurora Droid, An alternative to the default F-Droid app, got an update after 5 years. What’s new? UI rewritten from scratch, modern tooling, four install methods, actions run in background, nicer notifications and better update logic. Gadgetbridge and Bangle.js Gadgetbridge were updated to 0.93.0 with a nice changelog. But more interesting, also CoMaps - Hike, Bike, Drive Offline with Privacy was updated to 2026.08.07-3-FDroid, fixing a bug. Why mention these is one paragraph? Reading the Gadgetbridge changes we’ve noticed one killer feature: CoMaps: Add support for navigation instructions. Yes, you can now have, in a fully FLOSS package, your watch as a route helper in your voyages. LocalSend was updated to 1.18.0 after a one and a half year pause. The changes look more like bug fixes, as the app was handsome enough already, yet we’ve seen it glitch a lot, specially when the user was switching to other apps. This update should make it not only more reliable but also faster. Joplin was updated to 3.6.21. A few weeks ago users we’re asking why our Joplin is so old if the upstream tags 3.7.x already. In our wish to fix our “slowness” we’ve updated the recipe to 3.7.2 and call it done. Only to find out that now users also needed to update their servers to the newer versions too. It appears 3.7 is still

considered unstable by the developer and we should, for now, stick with 3.6.x. This confusion was based on some missing bits of information regarding how upstream deems versions stable. This has been clarified, the “new” incompatible build was removed and users should make sure they run latest 3.6 now. Prav was updated to 2.20.1+prav which brings it up to date with Conversations, its base app. What’s more important is that Prav covers the same use case Quicksy did, which was unfortunately, shut down last month. An XMPP client? Which case? If you and me, FLOSS enthusiasts, know and understand the importance (and privacy and security) of a self-hosted service, most big monopoly silo services users know one way to interact: phone number in-app. Prav is the only one left doing this now for a decentralized federated open protocol. You can visit its website to learn more. @shuvashish76 takes a horse and jumps over a tower to bring us news: Lichess developers are posting about the achievements of the first half of 2026. You’ll need 20 minutes to read about developers on-boarding, mobile app enhancements, site updates, events broadcasts (and their challenges), interviews, FIDE stuff and much more. Take a dive here. Removed Apps 1 app was archived Funkwhale for Android: The official client for Funkwhale Newly Added Apps 46 apps were newly added AgePony: Encrypt & Sign: Post-quantum file & message encryption with age. On-device, private, no ads. Anonomi Messenger: Decentralized messaging for high-threat environments Battery Tile: QS tile with detailed battery information. BikeTrackd: A cycling speedometer and GPS tracker with offline maps and bike maintenance BroadBoard: Large, high-contrast on-screen keyboard designed for low vision users Chompass - Calorie Tracker: Ad-free AI calorie tracker. Snap, speak, or type meals. CHRONOS: Schedule your SMS in advance, without replacing your default messaging app. Clockwork: TOTP codes without a network permission. Offline by design, nothing stored. Currency Converter: CBR & market rates: my currency, favorites, offline cache, daily summary Cyclauncher: Fast, accessible launcher focused on speed and one-handed use Droidrops: Droidrops RSS client Eve Game Tracker: Track card game results. FreeProxy: Route your traffic through a SOCKS5 or HTTP proxy, per app. GeauxWeather: Clean, fast, no-ads weather with radar, storms, and places Guandan 掼蛋: Guandan card game for four players over local Wi-Fi. No server, no account. Harbor: Local, FOSS work-profile isolation and app management Hermes Mobile: Remote control for your Hermes AI agent Hestia: Local control of Shelly devices — no cloud, no account, no tracking. Hupl: Upload files to any HTTP server from your device’s share menu. King Post: Share videos to YouTube, TikTok, Instagram, and other Android apps Liseur: EPUB reader and Calibre-web or Komga client Malarm: Flexible no-frills alarm scheduler Match 3: Minimal Match-3 puzzle game meine Gleitzeit - my flextime: A simple local app to track your working hours and flexitime. motd: Native IRC client with a modern chat interface N-Zik: A modern, multilingual YouTube Music client with offline support. Neuron Encrypt: Local file encryption. No accounts. No internet. No compromise. Nightbell: Uptime monitoring that runs on your phone. No server, no account. Pageless: Offline-first audiobook player for your self-hosted Pageless server. PDF Toolkit: All-in-one PDF and image toolkit Personal Health Records: Record personal health measurements and view trends locally. Quiet Grid: Privacy-first logic puzzles. No ads, no internet, no account required. ReteKey: Hangul keyboard with Esc, Tab, Ctrl and F-keys. 470 KB, one permission. SayWhen: One phrase — and it’s on your calendar. No forms, no fields. SearchLauncher: Search apps, contacts and the web, and open results in an ad-free browser Seenema: Movie Tracker: Track and rate the films and series you have watched. No account, no ads. Shopping List for Nextcloud: A fast, offline-friendly shopping list that syncs with your Nextcloud server. SmokingYou: Minimalist, data-oriented smoking tracker with analytics, widgets, and themes. Terminator: Multi-session terminal emulator with Material UI theming and root support Track Exploder: Extract, remix, and practice with barbershop learning tracks Tubester: Scan Hitster cards and play their songs on YouTube TypeAssist: AI-powered accessibility assistant for intelligent text transformations. Unmukto: An offline Bengali keyboard using the Probhat layout. No permissions. WhisperType Keyboard: Offline keyboard with QWERTY typing and on-device speech dictation Windy Live Wallpaper: Live wallpaper visualizing local wind patterns XMRPod: Podcast player with Monero tipping support. Downgraded

Please subscribe to the RSS feed in your favourite RSS application to be updated of new TWIFs when they come up. You are welcome to join the TWIF forum thread. If you have any news from the community, post it there, maybe it will be featured next week To help support F-Droid, please check out the donation page and contribute what you can.

- Dry season? Apps are pouring (2026/08/07 00:00)
  This Week in F-Droid TWIF curated on Friday, 07 Aug 2026, Week 32 F-Droid core F-Droid and F-Droid Basic were updated to 2.0-rc0, you know the deal, changelog is short. If this is news to you and you didn't update to any 2.0 development builds yet, hello and welcome, so many things have changed, you'll just have to experience it. Navigate to the F-Droid or Basic app details page, check "Allow beta updates" in the top right

three dot menu, and update. In website news, our mirror sync permission issue should be fixed now. Do ping us if you see any package that refuses to install, after you've made sure you got the latest index update, of course. Community News FrOSCon 2026 Schedule, Programm App für die FrOSCon, was just added and make sure you install it to easily find our F-Droid contributors booth next week-end. If you already have Giggity installed, you can use it with the official schedule (https://programm.froscon.org/2026/schedule.xml) too. Rethink: DNS + Firewall + VPN was updated to v0.5.5z which appears to be a bit unstable. Some users got some crashes so maybe avoid updating to this version for now. We'll disable it in our repo while the developers figure stuff out. Missed in passed weekly news, Session devs have written about "The Future of Session" and about the "Protocol v2 development". Looks like this messenger might continue to live on… Back in July we noticed that 萊姆輸入法 source changed some strings and autoupdate has not picked any updates… for the last 3 years. We are now up to date at 7.4.0 and we're keeping an eye on logs for any other app that might need extra attention. We've mentioned Snowflake Volunteer at inclusion time, but did you know how this app came into existence out of Orbot's "Kindness Mode"? The folks at the Tor Project host a post that explains how tools and contributors helped. Newly Added Apps 37 more apps were newly added AnDraw: Trace images through paper with touch switched off Anti-Vocale: Offline voice-message transcription, fully on-device BinClockWidget: AMOLED-black monochrome binary-clock home-screen widget Block Blast: A minimal, privacy-focused block puzzle game Bote: Split shared group expenses and settle up with minimal transfers BurnPony: Self-destructing encrypted notes. The recipient just opens a link. Couchy Launcher: A fast, private one-screen launcher DeBurrow: A modern Gopher protocol client. FeedTV: TV, radio and RSS news. Supports custom M3U lists. ForgetMeNot: A simple todo app with reminders and Obsidian integration Heart Rate Monitor: Monitor heart rate via BLE devices with real-time display, history, and alerts kiFOSSk: Lightweight FOSS kiosk browser for dashboards. Zero Google services. Knit: Encrypted mesh chat over Wi-Fi Aware & Bluetooth — no internet, no servers. LibreAAC: Private, offline AAC communication using open OBF and OBZ boards MA Astronomy: An AR night sky viewer Mahjong Solitaire: Classic tile-matching puzzles without interruptions, tracking, or ads. MetroMusic: A music player in the Windows Phone 8 idiom, for the music on your phone. Mihrab: Prayer times, adhan reminders, Quran reader and widgets. No trackers. Minesweeper: Configurable offline Minesweeper. Miroji: A fast, simple, private front-camera mirror Neruppu: Offline-first physical security monitoring using device sensors NetToggle: QS tile to force 5G/4G Only or preferred modes using Root or Shizuku Nexus Command Center: One Life Score for finance, fitness, study, work and habits Noir Gym: Log workouts, chase PRs, and grow your Fitness Score with every rep. Nonogram: Picture logic puzzle game with no ads or tracking PaperTerm: An e-ink-friendly SSH terminal pcontacts: Sync Proton Mail contacts into the device system address book. RPG NPC Generator: Generate random D&D-style NPCs for your tabletop RPG sessions. SimpleDay: Minimalist Markdown diary with app lock and your-own-cloud WebDAV sync. Snore Detector: Detects snoring during sleep and records snore events. Tankblick: German fuel prices — data-frugal and without tracking The Universe Decides: Can't decide? Let the universe choose. Tryst: Private, offline, encrypted tracker for your intimate life. TV Remote: Web remote control for Android TV — no cloud, no account, LAN only Wortmühle: Daily German word puzzle — 9 letters, one pangram, fully offline xlog2: Peer-to-peer amateur-radio field logbook that syncs with the xlog2 desktop Zipline: Manage your self-hosted Zipline V4 instance. You are welcome to join the TWIF forum thread. If you have any news from the community, post it there, maybe it will be featured next week To help support F-Droid, please check out the donation page and contribute what you can.

- Mid-summer app-stravaganza (2026/07/31 00:00)
  This Week in F-Droid TWIF curated by a human on Friday, 31 Jul 2026, Week 31 F-Droid core Testing of F-Droid main and F-Droid Basic continues. We got a couple of error reports from the 2.0 latest alpha11. We urge you to update your client to the latest release and test it thoroughly. If you see any errors, remember to send them in. In the process of modernizing the app, we’ve raised the minimum needed system version to Android 7. Looking at the submitted error reports, we are glad to see most of them are from Android 15 and 16, meaning users devices run recent system code benefiting from security fixes. At the same time, we want users of older Android versions to benefit from our client enhancements. If you’re on Android 12 to Android 14 remember that you’ll enjoy unattended updates as usual, on top of a nicely looking app with Expressive You support to customize its visuals. But, we’ve seen few to none reports from devices running Android 7 to 11, and while we are developing the client carefully, we know bugs will still pop-up. Yes, on these old devices, you’re still getting annoyed by pressing “Install” for each app update, but the new features, the evolved search, the new warning system for old apps and all the dozens UX changes are worth the small pain. You’ve read above and want to help? Get the latest 2.0-alpha by navigating to the F-Droid or Basic app details page, check “Allow beta updates” in the top right three dot menu, and update. In F-Droid repository news, the last two cycles encountered a permission issue affecting some packages. Basically the files are inaccessible to the browser on the web page and in client when the main server or the primary mirrors are used. We’ve fixed them manually for now, while working for a fix in our automation code that drives this part of the process. We track this issue here. Fun

fact: You can see in the linked issue above pics how 2.0 client will present such an error, an improvement over the old annoying toast blocking the screen. Community News aTalk was updated to 6.4.0 dropping support for armeabi-v7a and x86 ABIs. Conceal Mobile was updated to 6.0.0… right after the developer lost the key. Yes, that's a thing, so… backup (if you can), uninstall, install latest version with the new key, carry on! Element Classic and SchildiChat Legacy were updated to 1.6.62 to fix a security issue. HomeFeed - RSS Widget was updated to 1.5.0 as the code was saved from the crashing developer SSD, but… not the key. Hence, new key means you need to reinstall the app, as mentioned above for the other app. Multi Launcher · Home Screen was updated to 1.12.0 Build 0, you know the drill, key change, reasons, uninstall, reinstall, re-configure, enjoy. SimpleX Chat was updated to 7.0 adding public names for channels and businesses - without user IDs. How? Read more in the post and white-paper. @Poolitzer doxxes their location in August: NewPipe was updated to 0.29.0 dropping Android 5 support and fixing a bunch of issues. The team will be at FrOSCon 2026 so make sure to check their booth when visiting. Psst, after you've got the stickers and said hi, do lookup the F-Droid booth too :wink: :wink: @shuvashish76 swears on standards: KOReader was updated to v2026.07. Highlights include: background cleanup for Archive.org PDFs, OPDS 2.0 basic support, SyncService replaced by the new Cloud storage plugin with various improvements + many more changes. The OPDS 2.0 standard is not in draft mode any more, StandardEbooks already supports it and Project Gutenberg will make it available in 2027. Vishal seeks northern lights: Aurora Store had a huge update to 4.8.4 with a revamped interface rebuilt on modern Jetpack Compose, multiple accounts, user reviews redesign, app lock, a buy flow, better notifications, better update screen, microG installer support and more. Archived Apps 24 apps were archived for their own safety (expand for the full list) BedrockStation (Pro): Connect your PlayStation's Minecraft to third party servers. BILIBILIAS: An auxiliary tool for Bilibili video caching, providing one-click caching campfire: Bandcamp client CoinVert: A powerful, modern currency converter Convertly: A sleek, ad-free unit converter ESBDirect: Access substitution plans EVE Mining Calc: Mining Helper for EVE Online Libreflix: Stream and watch independent films link eye: open url with your preffered app Metronome: A simple and modern Metronome App with presets and tap tempo. Mobile Pauker ++: Learn intuitively with flash cards and synchronize your lesson with Dropbox OSMBugs : Shows Bugs from the different quality assurance tools from Openstreetmap Quicksy: Jabber/XMPP with Easy Entry and Easy Discovery (Covered previously, read here) Qwotable: An application to read and store quotes Rabbit Escape: Lemmings-like puzzle/action game SaveTo.Downloader: External downloader for SaveTo (companion app) SaveTo…: Save shared image or pdf to selected directory SBW: Bitcoin wallet Seers Lodge: P2P Chat Application Show Youtube Dislikes: Bring back Youtube Dislikes for Android T-UI: Terminal based launcher TestApp: Learn better with TestApp! Vuze Remote: Manage BitTorrent clients YidKey KD: Yiddish keyboard (Compatibility Decomposition) Newly Added Apps 52 apps were newly added Arrow Escape: Infinite Puzzle: Minimalist arrow puzzle game with infinite levels, zero ads, and total privacy Astro Loop: Open-source rogue-like shooter. Simple to play, no ads, no tracking, offline. Atrium: Control your self-hosted media stack from one app cmus music player (android): Lightweight music player with touch-friendly controls and system integration. Crystal Ball: Detects guitar chords and combines them into song sheets. Custom RR: ROMs & Recovery: Custom ROMs, recoveries & Treble GSIs for your devices, all in one catalog. Datamosh: Create live datamoshed videos with your camera Diktafon: Voice Memos on Tape: Voice memos on cassette tapes — transcribed & summarised offline, on device. You are welcome to join the TWIF forum thread. If you have any news from the community, post it there, maybe it will be featured next week To help support F-Droid, please check out the donation page and contribute what you can.

- Feeling this connected (2026/07/24 00:00)
  This Week in F-Droid TWIF curated on Friday, 24 Jul 2026, Week 30 Community News Fennec F-Droid was updated to 153.0.0 adding tab groups, another annoying instance of the privacy dashboard (So, Mozilla, your telemetry showed everybody disabling that from the Start page so you've added it to the Tab page because…? Pfft), downloads improvements and bug fixes as usual. One noteworthy announced feature was "Bookmark import: Import your bookmarks from a CSV file." which I've run to use right away… to no avail, because I have no idea how to actually use, or where. (Ping us if you discover it, please!) Mattermost Beta was updated to 2.42.2 with the usual bug fixes and rather minimal new features (those come from the server usually). Oh, about the server, 2.41.3 was the last version that was compatible with older server versions down to

9.0 or maybe even lower. If you still run that make sure to update to latest ESR v10.11.xx, it will work even on older Linux distros, just make sure you have Postgresql 13+. Organic Maps□Offline Map & GPS was updated to 2026.07.15-11-FDroid with a bunch of improvements, public transport, alternate routes, bookmarks colors, more grids, newer map and Wikipedia files and more. For years, the point of disagreement between the F-Droid team and the OM developers was the flagging of their file server as an anti-feature, “TetheredNet”, and this is fixed now. In the app you can typepaste ?map-download-server:https://your-server.com/ in the search window to override the Organic Maps map download servers. TypePaste ?no-map-download-server to remove the override. We welcome this change but we’d like the addition of a proper Setting instead of this contrived trick, just like their fork CoMaps - Hike, Bike, Drive Offline with Privacy, updated to 2026.07.16-10-FDroid this week, has. Talking about maps and navigation, OSMAnd~ had a series of posts we’ve missed about some of their features you might not have yet explored. Get bold and read on astronomy, 3D buildings, nautical maps and measuring tools. Speaking of Fennec, WebLibre: The Privacy-Focused Browser was updated to 0.20.0 with a huge changelog. Will not even try to summarize that, just read it while it installs (or updates)! @shuvashish76 disconnect their desktop: Offline Translator was updated to 0.8.2. You might miss the simplicity and the power of the app on your desktop, but stay chill, the developer got you covered as they just released the Qt port of offline translator for Linux. Removed Apps 2 apps were removed sub rosa by naiveHA: Program the static password and/or OpenPGP keys to your YubiKey or Nitrokey 3 (Get a replacement from the Password & 2FA category) Tubular: A fork of NewPipe, a free lightweight YouTube frontend for Android. (Source repository archived, switch to NewPipe or some other fork) Newly Added Apps 35 apps were newly added 1Key Password Manager: Offline password manager. 2FA + notes. No account, no network, no telemetry. AIPOS Password Manager: Premium, fully offline, and secure password and 2FA TOTP manager. Arcade: A minimal game launcher with a twist Baluchon: Easily manage shared expenses with friends on your trip Bondwidth: Private, offline phone & contacts app that helps you keep up your bonds Bruno’s Meditation Timer: Meditation and pranayama timer with streak tracking and other statistics. CBG -- Clavierhaus BackGammon: Play, train and analyse -- powered by the GNU Backgammon engine ClaviRom: Customizable keyboard with a flavour of Swiss-Romansh crocson: Easily and securely send things from one computer to another Defang: Launcher that puts speed bumps between you and the apps engineered against you Device Watch: System monitor widget with per-app usage insights and a charging screensaver DNS Toggle: Easily toggle and automate Private DNS through the Quick Settings panel. Do The Thing: A local-first personal coach that surfaces the right tasks each day. Drill Press Assistant: Spindle speed calculator and belt position advisor for drill presses FediSuite: Schedule, manage and analyze Fediverse accounts on any FediSuite instance Goregram: A Telegram fork with minimal extra features LaBLEr: Design labels and print them on a P15/P12/L13 Bluetooth thermal printer Little Painter: Fullscreen toddler painting app that locks the phone to the canvas LocalMathy: Solve math problems fully offline with an on-device AI reasoning model Milki Launcher: Launcher with multi-source search MorphCook: Offline recipes that morph to your diet — one cookbook for every body. NovaDial: Unlock a secure, calling experience with NovaDialer OTG Master: Mount VeraCrypt-encrypted USB drives on non-rooted devices QSO Again: Record and playback amateur radio QSOs with Audioloop and quick rewind. Quiet Rebellion: Control your Bose QC Ultra 2 directly — no Bose app, no cloud, no account. Randomly/Die: Random number generator with fast UI, dice, hex, binary and secrets Skylight Wallet: A Monero light-wallet Snowdrop: Multiplatform Mastodon API client using Compose StudFinder - Stud Finder for Android: Find wall studs with your device’s built-in magnetometer. Free, no ads. You are welcome to join the TWIF forum thread. If you have any news from the community, post it there, maybe it will be featured next week To help support F-Droid, please check out the donation page and contribute what you can.

- The last alpha of 2.0? (2026/07/16 00:00)
  This Week in F-Droid TWIF curated on Friday, 17 Jul 2026, Week 29 F-Droid core F-Droid client released 2.0-alpha11. It will be marked as suggested if there is no severe bug found. As usual, please help test it! Hans (@eighthave) traveled to EuroCommons, paid for by your donations. EuroCommons is a series of events organized by the French government’s Caisse des Dépôts” investment bank. Many companies, government employees, and FOSS projects where there. The central goal is helping accelerate large organizations to migrate to FOSS solutions as fast as possible to support Digital Sovereignty. Community News @23rd: Scrib is a small new app for on-device voice transcription: it turns audio into text entirely on the phone using open Whisper models (whisper.cpp), and only goes online to download a model. Besides working on its own, Scrib can act as an offline transcription engine for other apps through a small, vendor-neutral AIDL contract (org.opentranscribe.api) — the same idea Offline Translator brought to translation, now for speech-to-text. An app discovers whichever compatible transcriber the user has installed and gets streaming text back, so it never bundles its own model. Vishal takes pictures: Immich got a major upgrade with breaking changes, most of which were previously deprecated. Other changes include new mobile photo editing, timeline changes, API cleanup, faster library browsing, improved video playback, workflows and a new “Recently Added” view. Please take a look at the blog post for more details. Immich Uploader was also updated to 3.0.0 for API of Immich 3.x. Shuvashish (@shuvashish76): Fauxx - Privacy Through Deception now supports AppImages. It’s a good time for Linux/BSD users to have to try. @Licaon_Kter converses: The registrations for Quicksy are permanently closed, as noted by its developer @daniel. The reason - “fighting industrial-scale SMS pumping fraud has become unsustainable”. Though Daniel is “committed to keeping the quicksy.im XMPP server running for at least 24 months”, Quicksy users are advised to eventually migrate to Conversations by

backing up the account in Quicksy and importing it into Conversations (write down the Quicksy password beforehand). The Kords developer lost their signing key. It is now published with a new appid. The old one has been archived. Please check Kords. @linsui: Another week with lots of new apps and updates! Journal Multilingual: Open-source drug use tracker with interaction checker and multilingual support, is a fork of Journal which is not continued as FOSS anymore. This fork also brings multi language support. HeliBoard was updated to 4.0 with lots of updates: add background gesture data gathering add file / image functionality to clipboard history add floating keyboard and more fixes and improvements... Obtainium was updated to 1.6.5, bringing Material 3 Expressive redesign: squircle shapes, pill buttons, 2-pane UI for large screens, etc. Hans (@eighthave) came upon an interesting interview with Sidephone founders on the Vivaldi podcast. They use F-Droid as a white label app for their app store and F-Droid tooling to distribute extra apps that their users might need. Check out their cool app collection on their website. If you scan any of the QR codes there with your F-Droid client, you'll see what I mean :). Listen to what they had to say on the Vivaldi podcast Removed Apps 1 apps were removed Kords : A ukulele chords dictionary and songbook. Newly Added Apps 46 apps were newly added 3X-UI Manager: Manage your 3x-ui / Xray proxy panels from your phone AirLyrics: Floating synced lyrics for Android Axichat: Replace your email, messenger, and calendar with one app. Battle for Burgers □□□: An Online-Multiplayer game. Collect so much more burgers as you can. You are welcome to join the TWIF forum thread. If you have any news from the community, post it there, maybe it will be featured next week To help support F-Droid, please check out the donation page and contribute what you can.

- Android Developer Vindication (2026/07/09 00:00)
  This Week in F-Droid TWIF curated on Thursday, 09 Jul 2026, Week 28 F-Droid core Last week we skipped our weekly post as we got busy with more pressing tasks around F-Droid, hence the lists below grew a bit more. What did we do instead? On the client side, we are polishing version 2.0 as we come close to a stable release to be offered to everyone. This means we get more eyes on changes, weight decisions and their impact, visit and close old issue, ping users that reported bugs to get one last feedback loop going and more. If you've been reading past TWIFs you're mostly up to date, but we'll include more fixes and improvements over alpha10 when ready. We also had our own board member Marc Prud'hommeaux analyze the latest Google announcement and the timeline pertaining to the Android lock-down. Since we've been writing about this for the last 10 months we hope everyone understands already how their actions and plans are affecting F-Droid and the whole FLOSS Android ecosystem by now. In "What We Talk About When We Talk About Malware" (already translated in 4 more languages) he explains how the developers are asked to give Google a carte blanche when agreeing to their vague terms. Cui bono? A fresh category was added, Volume, Manage volume setting and two new apps: Dhwani - Volume Control, Restore system volume controls on devices with broken volume buttons and Granular Volume: Quiet Dial, Make any app quieter than your phone's minimum. A floating fine volume dial. The website Category listing is a huge long page now, luckily contributors started porting the meta categories design from the 2.0 client update, so this will be improved soon. Community News The Bryant Review serves us two new interviews. First with DocWolle, that you already know as the prolific woheller69 (how many apps? wow), in "F-Droid and the Future of Open-Source Android; An Interview with DocWolle" they cover the human behind the nickname, app development, the AI rise and the Android changes to come. Second with PranshulGG, creator of WeatherMaster (not yet in F-Droid, but in the IzzyOnDroid repo), in "WeatherMaster, Open Source, and the Future of Android; An Interview with Pranshul" they talk about the ease to build for Android, open-source, privacy and the future of app stores. The second intro is particularly interesting: When I recently interviewed DocWolle about his work on open-source Android, one thing became immediately clear: some of the most interesting developers aren't working inside giant companies or chasing millions of downloads. They're building software because they genuinely want to solve problems, share their work with others, and make Android a better place for everyone We hear Google repeating that the Android lock-down is appreciated by everyone, while (you) our users and the FLOSS apps developers fought for a free Android, against the Google changes, since day one. Google pushed its own app verification app to 4 billion devices, but we already have app verification at home, AppVerifier BG was updated to 0.6.1, and it fulfills our needs: FLOSS, decentralized and driven by the community. No gate-keepers needed nor wanted! Bangle.js Gadgetbridge and Gadgetbridge were updated to 0.92.1 adding more supported devices, per device features and fixes. evcc - solar charging was updated to 1.3.3 with a key change. The nature of the tools used to build the app makes it hard, for now, to successfully build reproducible apps. Hence, the developer, after many tries, decided to switch the app to the F-Droid signature. If you've installed the app before June 26, please uninstall and reinstall it. Featherline: HRT Tracker, Private medication tracker for HRT routines — plans, reminders, personal logs, was just added, a first in F-Droid. It's local, encrypted, lockable and easy to visualize. Fennec F-Droid was updated to 152.0.4. Major version 152 has brought a lot of UI fixes, security fixes,

PDF sharing and page zoom performance improvements, but it’s not trouble free. Some users, with a diverse mix of devices and Android versions, seem to not be able to even start the app. If you encountered as such you can try this one weird trick: open a URL by sharing it from another app. When the app starts, go to Settings, Home Page, and toggle off all the items (shortcuts, privacy report, etc) and test. Some testers were able to enable them back and fix Fennec, but results can vary. We are tracking this issue here. ObtainX, A supercharged Obtainium: get app updates straight from the source, was just added. A fork of Obtainium, also updated to 1.5.2 last week, it adds a lot of nice things on top, too many to list here. An interesting one concerning F-Droid and IzzyOnDroid, is App Verification support straight from our repos, you can get the details here. Fun fact: Obtainium will get a refresh to Material Design 3 in the next version. pyLoad was updated to 0.4.2 modernizing the app after a 5 year pause with better themes, exceptions handling, latest Android support and more. Saracroche was updated to 5.0.0 with many changes under the nice interface. Les Numeriques magazine has an interview (in French) with the developer here. ShizuCallRecorder just got switched from the F-Droid signer to the upstream developer one. If you’ve installed it before July 6 you’ll need to uninstall and reinstall the new version. Tor VPN Beta was updated to 1.8.0Beta polishing the experience. We’ve skipped 1.7.0Beta and the x86 and x86_64 architecture builds for now as reproducibility verification was failing. @shuvashish76 brings a bag of goodies: App Manager was updated to 4.1.0 after one year. Now we have ADB data backup, filter-based profiles, app usage barchart, more installer options, better performance, nicer UI & accessibility and more. Rocinante was updated to 1.1.0 with fixes. Last week the developer talked about the experience of adding the app in F-Droid, this week, in line with Marc’s post mentioned in the opening, the developer is pondering (in Spanish) the future of app distribution. Traffic Light was updated to 3.0.1 adding data plans enhancements, persistent notifications and more. FLOSS developers are doing a great job, but they need help to be able to work, fix and enhance. Apps that depend on hosted services, like wallabag, need people to administer servers, incurring a cost. The wallabag.it, paid services, will directly fund development work contributed back to the project, helping to keep the ecosystem healthy. Archived Apps Contributor @Maxwell.s-demon got a shiver to ponder the future of apps whose code was archived, took time to visit many of them and report which should be marked as “archived”. As usual we encourage you to (expand the list and) see if you need to replace any app with one that’s still developed. NOTE: If you are using the latest client version 2.0-alpha10, you will be informed about these in the MyApps -> Issues section. 58 apps were moved to the Archive repo (expand for the full list) 10,000 sentences: Learn new words in foreign languages aTox: aTox, a beautiful and modern Tox client Aurora: Non-official Library Genesis mobile client AutoDark: Utility to schedule system dark mode Avare: Aviation map BBS: Monitor battery behaviour with Better Battery Stats BikeComputer: BikeComputer Bookland: Track all of your book readings Calculator-inator: Calculator & Converter Chip8: Chip8 emulator Chiver: Minimalistic theCHIVE galleries browser Cooky: Recipe manager: import or create your favorite recipes Cyrillic to Latin: Transliterator for Latin to Cyrillic and vice versa DigiPaws - Digital Wellbeing and App Blocker: Monitor and Cut Down Your Screen Time Effectively Disable Battery Warnings: Disable the annoying low battery warning popup and sound Dogecoin Wallet: Store digital currency EasyRSS: RSS reader compatible with Google Reader API FairSpeed: A lightweight, privacy-focused network performance monitor Foreground: Task manager app, supporting syncing with Taskwarrior GApps Browser: Sandbox for web apps Gelli: Native music player for Jellyfin GrowTracker: Help record data about growing plants Ionic Notes: A simple notepad app Mealient: Unofficial client for the self-hosted recipe manager Mealie Mindful Notifier: A mindfulness bell with configurable text notifications, scheduling, and sound Minimalistic Price Converter: Minimalistic app converting prices of fiat shitcoins and Bitcoin Mint Calculator: A simple calculator and converter app with Material Design 3 mpvKt: MPV based media player: A media player based on the popular commandline media player mpv mTPMS: Read tire pressure sensor NeuroLab: App for the Neurolab Open Hardware platform Nex Notes: Taking quick notes NowiPass: A password manager where you are

You are welcome to join the TWIF forum thread. If you have any news from the community, post it there, maybe it will be featured next week To help support F-Droid, please check out the donation page and contribute what you can.

- What We Talk About When We Talk About Malware (2026/07/01 00:00)
  If you are running Android 8 or higher, a virus has been installed on your device and is silently awaiting remote activation. Over the past few months, devices around the world have been infected with this novel strain, with as many as 4 billion Android handsets and tablets estimated to have already been contaminated, meaning that around half of all humanity may be at risk from this threat. Disguising itself as the innocuously-titled “Android Developer Verifier” (ADV) process, this trojan horse runs surreptitiously in the background as a system service with full root privileges, quietly awaiting an activation signal. The service cannot be blocked, disabled, or removed. Unlike a commonplace bit of malware, this extraordinary strain won’t be detected and neutralized by Play Protect (the malware scanning and remediation service that is installed on all Android Certified devices). In fact, Play Protect is itself the vector through which this virus is transmitted and installed. That is because it is Google themselves who is propagating ADV. And once activated, this malevolent process has exactly one goal: to block you from running software by developers who haven’t been approved centrally by Google. Threat masquerading as Protection We first raised the alarm about the Android Developer Verification program last September (“F-Droid and Google’s Developer Registration Decree”) shortly after it was first announced. Google’s looming requirement that all Android developers register themselves centrally is rationalized as a solution to help stem the spread of malware. However it doesn’t actually feature any capabilities to prevent a malevolent actor from distributing malware in the first place; the only alleged benefit of ADV is that it may help slow the actions of an already-identified recidivist by requiring that they create (or buy)

another account in order to continue distributing their malware with a new signing key. For this fairly narrow threat vector of malware recidivism, a variety of considerably less draconian solutions have been proposed. Play Protect itself could be enhanced to scrutinize more closely those newly-installed apps that have elevated permissions or that were obtained through suspect channels, continuing with their recently touted advances in on-device security capabilities. Or a system of federated verifiers might be implemented (as proposed in “DCM: A Developers Certification Model for Mobile Ecosystems”, 2023) that would empower end-users to select their own trusted curators and authorities for ex-ante approval. Instead, Google has used this minor vector as a pretext to radically re-engineer the entire Android ecosystem by fiat, upending a 18 year tradition of open software development and positioning themselves as the world’s sole gatekeeper for which apps are permitted to exist. What They Talk About When They Talk About Malware Should a developer — contrary to our recommendation — elect to register themself with Google as a “verified” developer, they should expect to sign up for an account and pay a fee, surrender detailed personal information and upload government-issued identification, and then proceed to register the identifiers and signing keys for all the apps they intend to distribute (now or ever). But the most diabolical stage is the compulsory agreement to the Android Developer Console Terms of Service. There are numerous causes for disquiet in this document, but the most concerning of all ought to be: 6.5 If You violate any of the Terms or if You distribute malware or other harmful applications, Google may terminate Your access to the ADC… This reasonable-sounding clause begs the question: what exactly is meant by “malware”? No definition of the term is to be found anywhere in the document. With the absence of any formal definition, standard, or guideline, it implicitly states: …and “malware” means whatever we say it means. As we discussed in “What We Talk About When We Talk About Sideloading”, beware the dangers of allowing the terminology of debate to be defined by those who don’t have your best interests at heart. Malware being synonymous with “software we don’t like” means that they can unilaterally dictate — driven either by business incentives or by being compelled by a sufficiently powerful government — what the malware-du-jour definition is to be. For precedent, personal content filtering in the form of “ad blockers” has long since been banned from the Play Store, and they have even classified some instances as malware. How long before they designate all ad-blocking software as malware, block installation on all Android certified devices worldwide, and permanently designate all developers of this class of software as malware creators? Such a move would certainly be aligned with their commercial incentives as the global ad-tech monopolist, and would be completely in accordance with the language of their ADC Terms and Conditions. Like a Lead Balloon In terms of voluntary developer uptake, they recently claimed that “over 99% of [Play developers’] apps have been registered” suggests that ADV is somehow a popular and widely-accepted dictate. That couldn’t be further from the truth: those 99% of developers were auto-opted-in without their informed consent due to being already bound by their Play Store agreements. In fact, hundreds of thousands of people have signed a petition opposing ADV. The Open Letter at keepandroidopen.org denouncing the program has been signed by over 70 organizations around the world, including the EFF, FSF, FSFE, ACLU, and the inestimable Forbrukerrådet. Any internet search, chatbot query, or social media poll will confirm that the opposition to this program is overwhelming and the condemnation is universal. 90% of viewers of the developer roundtable video where they attempt to defend the program registered a dislike of the spectacle, and even Google Gemini responds to inquiries about the popularity of the program with: Aside from Google itself, finding full-throated, enthusiastic support for the mandatory Android Developer Verification program in the tech community is virtually impossible. The backlash is overwhelmingly dominant—headlined by the “Keep Android Open” coalition of civil rights and open-source groups fiercely opposing the central registration requirement. And yet their lockdown blitzkrieg proceeds apace. Legislators and regulators have thus far been unreceptive to the outcry. Our own position as a bastion of software freedom and respect for user rights and privacy is in extreme jeopardy. The F-Droid model of security and trust

through open-source transparency is fundamentally at odds with the “trust me bro” security model of the closed-source commercial app stores. And while these two models have been able to co-exist for the past 16 years of F-Droid’s existence, it appears that Google intends to establish a regime where they alone have a monopoly on the definitions of “security” and “trust”. What to Expect in the Days to Come We do not yet know the exact failure mode to expect when the ADV activation is triggered on September 30. If you are one of the 580 million people living in Brazil, Indonesia, Singapore, or Thailand, know that these are the first four targets of the ADV lockdown according to their published timeline (global rollout is ominously predicted to then occur throughout “2027 and beyond”). There are many things we don’t know about what to expect on September 30. Some common questions that we do not yet have the answer to, for those in the afflicted regions, are: What will happen if I try to install or launch the F-Droid app? What will happen to all the apps I’ve installed through F-Droid? Will they be disabled? Deleted? If apps that I rely on are suddenly disappeared, what happens to the data they contain? Can I still retrieve it? With all software installations and launches now being reported back to Google for verification, what specific information does that telemetry include? We have reached out to the malware vendor with our inquiries. In the coming weeks and months leading up to the lockdown, we will be publishing more guidance and support for those due to be impacted by ADV.

- Summer hot waves (2026/06/26 00:00)
  This Week in F-Droid TWIF curated on Friday, 26 Jun 2026, Week 26 Community News F-Droid, in its 16 years of existence, has often been a study subject as our openness and transparency make it easy for anyone to not only build a random app, but to recheck our hosted apps from today, from 10 years ago or all at once. On our forum, you can now read a preview of a new study that will be presented at 2026 ACM Conference on Reproducibility and Replicability next month, titled “Understanding Build Reproducibility in the F-Droid Ecosystem“. While the numbers, reproducible vs non-reproducible, won’t beat giants like Debian, they do show that our tooling and efforts over time to encourage developers to adopt reproducible builds are paying off. The Bryant Review made two app lists for you to (re)discover, “Some of Android’s Most Interesting Games Aren’t Just on the Play Store” and “The Other Side of Android: My Favorite F-Droid Apps” covering both fun and practical apps. And yes, we’ve tooted at them to test F-Droid 2.0-alphas. Adding an app to F-Droid might have its share of mysteries, but some developers dispel the fog, succeed and live to share the story. The developer of Rocinante, updated to 1.0.5 this week, writes in Spanish (Fennec/Firefox would just translate it), about the experience here. Also the developer of whatIwatch, updated to 0.1.2 this week, found the time to muse about the inclusion process. Their app is written in Flutter, so if that sounds familiar to you, put a bookmark on the post for when your app is ready for the F-Droid release. Talking about games, 99Managers Futsal Edition, A futsal management game with a 2D match engine and integrated editor, was just added with great timing, during an international soccer/football championship. While we have many Godot engine games, this one is a bit more special, as it’s a reproducible build app. Maybe this feat is based on its nature, a 2D type game, but the developer has contributed a recipe template so many more devs can try too for their own games. Element Classic was updated to 1.6.58 and as the modern Element X did last week, fixes a security issue. If you still use this version, please update. Find Family, Find Family is an end-to-end encrypted location sharing app, was archived as it was already replaced with Find Family, same name and same developer, updated this week to v2.5.5. FluffyChat was updated to 2.7.2 with a huge change log, read down to 2.7.0 too. Given Matrix clients news above, and last week, it’s a safe bet to make sure you are updated. Odysee was updated to 0.1.6-foss using the new native app codebase. The changes are extensive, so explore at will. SimpleX Chat was updated to 6.5.6. One interesting piece of news we stumbled upon this week was a post by the Trail of Bits company (think security audits, think FLOSS friendly) about their partnership to find and fix bugs using AI. You can read the whole post here and you can see the proposed fixes for

SimpleX here. Oh, btw, how would you feel about such an endeavour when it comes to F-Droid? Some think it’s easy to answer, some say it’s complicated. @linsui translates in a QR code: Mercurygram was updated to 12.8.1.1 adding offline translations, better Tor, better animations, better rich text editor and rendering and more. Android provides a Translation API since Android 12 but it can only use the OEM (generally non-foss) translation service and it seems custom Android distribution, like LineageOS, might not provide anything. By the way, Offline Translator, updated to 0.7.0 this week, could be a provider too, keeping your translations private on device. tagdrop was updated to 2.1.0 after 11 years, with the help of… AI. Anyway, the concept is interesting, as a challenge of sorts, do try to cram as much as possible in a QR code, any interesting use case? @shuvashish76 names a name: GitHub Store is now named Komi Store and updated to 1.9.1, with browsing improvements, shortcuts and more. Removed Apps 2 more apps were removed Harmony Music: An Android App for streaming Music SpMp: A YouTube Music client with a focus on language and metadata customisation Newly Added Apps 72 more apps were newly added Aerial: Lightweight radio player aka Alarm: Wakes you within a 30-min window when you start stirring Arcanum: Encrypted container manager compatible with VeraCrypt BackgroundWorkAround: Help your other apps survive in the background Battery Monitor: Monitor your device’s battery status in detail, in real-time Bible Lock Screen: Daily Bible verse on your lock screen wallpaper Bluetooth Remote: Universal serverless Bluetooth HID remote control Bluke: Use your device as a Bluetooth mechanical keyboard, gamepad, and trackpad Boky Fivavahana Anglikana: Madagascar’s Anglican common prayer book Calendula: A modern Material 3 Expressive calendar for Android CallScope: Local-first call log analytics Calyx - Grow Tracker: Track indoor gardens, plant schedules, and hardware entirely offline Camera by vayunmathur: The best Camera app Controller for QLC+: Native 3rd party application for controlling QLC+ v4 Cube Run: Dodge, jump and slam through a neon 3-lane gauntlet. One-thumb 3D runner. Curbox: App & Website Blocker: App blocker and screen time tracker. Block apps, websites, reels and shorts. DuWave: Dynamic local music player Ewoc: Indoor cycling workouts for FTMS smart trainers FastLog: An opinionated, fast, native app for Logseq Feltbok: Log bird sightings in the field and export them to Artsobservasjoner Field Survey: Your field logbook, on your phone - build any survey, powered by your device. FocusBuddy: A cute, privacy-first Pomodoro companion FontStylr: Stylize your text with cool fonts - emo, goth, bolt, gl1tch3d Formulus: Offline-first bespoke data collection from Open Data Ensemble Gitling: Git client built with Jetpack Compose and Material 3 Expressive Groce: Grocery, to-do, and packing lists, ordered by store aisle or category. No ads. Hebrew Calendar: Hebrew date, holidays, zmanim and Omer count on your lockscreen Internet Radio: Discover and listen to thousands of free internet radio stations worldwide Latarka: Toggle flashlight with a shake gesture LNCT Attendance: Track classes and view timetable statistics LoanPro: Fast mortgage, auto, credit, and personal loan calculations MainTask: Reminders for your recurring tasks: oil change, insurance, filters… maripànaTokana: Weather app showing metric and imperial units side by side in 8 languages Marlin: Identify marine species on the spot and keep a personal sightings life list MetroVault: Air-gapped Bitcoin signer for offline cold storage. QR-only, no network. MinimaList: Local-only outliner — no cloud, no ads, no tracking Nebula: GPU-accelerated HDR nebula fly-through screensaver Noty - Notes in Notification: Pin your notes to notifications — always visible, never forgotten Oksigenia SOS: Smart safety and distress alerts with fall and inactivity detection openCook: Recipe manager to scan cookbook photos, plan your week and share the list openDSP-4x4: Open control for the t.racks DSP 4x4 Mini Pro over USB-OTG. OPNsense Manager: Manage OPNsense firewall: monitor, configure rules, view logs & services Passwords: A basic passwords app PDF Unlocker: Unlock password-protected PDF files locally Pinpoint: Map things/points of interest in your surroundings and across the globe Pitak — Personal Library: Track your books, lending, and wishlist — fully offline, private by design. Podcini.A - Extensible media instrument: Your premier podcast/media instrument, now extensible, capable of YouTubing ProcrastiLearn: Block distracting apps until you review a spaced-repetition flashcard Project Asteria: Daily space discoveries,

interactive launch schedules from NASA, APOD, Astronomy, Space, SpaceX, NASA Launch and Space Discovery Readwide: Local-first reader and file browser RedTrigger: System-wide shoulder triggers for Nubia Red Magic phones RPClient: Local-first AI role-playing chat client ScenePeek - TMDB & Seerr: A TMDB & Seerr client to provide you with comprehensive information on movies and TV shows scorecounter: A simple score counting app Screen Off Timer: Clean sleep timer to stop media and lock screen Secure QR Share: Share passwords and links securely via encrypted QR codes SignalSense – Network Switch Alerts: Know the instant your network switches between 5G, 4G, 3G, or 2G Slate: Minimal text-only home screen. No icons. No analytics. Zero network. Solitaire: A solitaire game SOS Alerter: Privacy-focused emergency app with SMS location tracking and silent recording SSH Remote: Use your smartphone to control your computer or HTPC Stack Tower 3D: Stack sliding blocks into the tallest tower you can. One-tap 3D arcade. StudiPassau: Access to the Online Portal for Students at the University of Passau Tessella: Create and explore polygon tessellations of the plane Thirukkural Daily Widget: A beautiful, minimal daily Thirukkural flashcard widget Trending AI: Global tech trends, fast-picked by AI. UT.urn - YouTube facilitator for Podcini.A: A service app providing YouTube contents to Podcini.A Water Reminder: Track your daily water intake and stay hydrated with reminders Water Sort: Relaxing color-sorting puzzle. Infinite levels. Zero tracking. No ads. Where It Went: You think you know. Then you see the numbers. Track where it really went. yadaw: A basic DAW for sound effects and music production Zenwell: Stop doomscrolling: Block distracting apps and reduce screen time Updated Apps 325 more apps were updated (expand for the full list) AAAAXY was updated to 1.7.89+20260622.4048.85269ef3 Acode editor - Android code editor was updated to 1.12.6 Activity Launcher was updated to 2.3.1 addy.io was updated to v6.2.7 Agora was updated to 1.3.7 AirPlay Server was updated to 0.0.12 Al-Azan - Prayer Times was updated to 2.0.0 Alchemist was updated to v2.5.5 AliasVault was updated to 0.29.6 Amber was updated to 6.2.2 AppVerifier BG was updated to 0.5.6 ArchiveKeep was updated to 0.6.0 aTalk was updated to 6.2.0 Atmo Engine was updated to 6.0.1 Audile was updated to 1.17.0 Audio Visualizer was updated to 1.0.9 Auto Auto-Rotate was updated to 0.14.2 Autu Mandu was updated to 6.0.3 Aves Libre was updated to 1.14.7 Backup (Privacy Friendly) was updated to 1.4.0 baresip was updated to 85.0.0 baresip+ was updated to 74.0.0 Baseline was updated to 1.0.13 BatteryTemperatureDisplay was updated to 1.4 Beam was updated to 1.8 Binaural Beat was updated to 1.1 Biometric Bypass was updated to 2.0.1 Birthday Adapter was updated to 3.13.1 Blockstream App (Green) was updated to 5.5.1 Bookaccio Book Tracker was updated to 0.4.0 Braincup was updated to 2.23.0 Breakout 71 was updated to 29700844 Brogue CE Android was updated to 1.15.1.20 C2K — Couch to 5K & 10K was updated to 1.1.0 CajuScan was updated to 1.0.8 Calendar was updated to v2.5.5 Calibre-Web-Companion was updated to 2.0.2 Calisthenics Memory was updated to 1.24.0 CalSync was updated to 1.6.0 Cantonese Keyboard - Jyutping was updated to 0.63.1 CAPod - Companion for AirPods was updated to 5.1.10-rc0 Capy Reader was updated to 2026.06.1211 Cartes IGN was updated to 3.5.2 Chip Defense was updated to 1.61 Chocola was updated to 4.3.0 Citrine was updated to 3.0.1 Clock was updated to v2.5.5 Cloudbase Predictor was updated to 1.8.0 Conduit was updated to 1.2.0 Contacts was updated to v2.5.5 Copy SMS Code - OTP Helper was updated to 1.20.5 Critical Maps was updated to 3.1.3 croc-app was updated to 5.0.0 Cuppa - Tea Timer was updated to 2.14.0 Cuscon was updated to 4.1.0.3 Dahdidahdit — The Morse Trainer was updated to 1.19.0 Daily You was updated to 2.25.0 De Fide was updated to 2.0.4 Delta Chat was updated to 2.53.0 DevQS was updated to 1.2.1 Dima Defense ⚔ was updated to 0.7.5 DobbyVPN was updated to 1.3.5 Droid_SCEP was updated to 1.5 DroidStress was updated to 1.6.2 Drowser was updated to 1.0.8 DuressKeyboard was updated to 6.5 DuressKeyboardLite was updated to 8.0 Easter Eggs was updated to 5.0.0 EinkBro was updated to 15.15.0 Email was updated to v2.5.5 Ente Locker was updated to 1.0.6 Ente Photos - Open source, end-to-end encrypted al was updated to 1.3.56 Entropy’s Defiance was updated to 3.2.0 Equalizer314 was updated to 0.0.12-beta Escapepod - Podcast Player was updated to 1.6.5 Extend was updated to 0.0.24 FakeBlankScreen was updated to 2.1.3 Fauxx - Privacy Through Noise was updated to 0.5.0 Fedilab was

You are welcome to join the TWIF forum thread. If you have any news from the community, post it there, maybe it will

be featured next week To help support F-Droid, please check out the donation page and contribute what you can.

- Organic Character Recognition (2026/06/19 00:00)
  This Week in F-Droid TWIF curated on Friday, 19 Jun 2026, Week 25 Community News Element X - Secure Chat & Call was updated to 26.06.2 and SchildiChat Next to 0.11.4-ex_26_6_2, fixing a security issue, on top of the usual enhancements. Do update asap! FairScan – PDF Scanner was updated to 2.0.0 and now can create searchable PDFs with text recognition (OCR). For this feature INTERNET permission is required to download optional language files. If you feel that Fairscan has helped you, maybe jump to the developers post on donations and show your generosity. FiSSH, SSH authentication via Fingerprint scanning over network (TLS Sockets), just got an appid change, as it was archived and the identically named FiSSH was just included. The developer is once again maintaining the app, so if you've had the app installed before last week, try to backup, uninstall and install the new app. Since we've mentioned a scanner app above, we have to cover MakeACopy update 4.5.0 too. New camera controls, new translations, text layer fixes, Material You dynamic colors, Material 3 dialogues, workflow stepper across actions, search in scan library, share text, export type selector, and more. Materializr, Parametric 3D CAD, might not get 10.000 users this week, but it answers a call for this type of apps being available for FLOSS fans. Might you design your next 3D printer ready object today from your Android? Photok was updated to 3.0.1 fixing an ANR after the big update 3.0.0. How big? A new vault system, HEIC support, more translations, faster thumbnails, better settings screens and more. @shuvashish76 records future bits: Audio Recorder was updated to 2.0.2 after almost two years, being rewritten entirely using modern tooling and frameworks. What do you mean "the app looks sameish"? Well if you read the changelog, that was intended, while a developer needs to wrestle with all layers of an app, we the users might experience only a thin shell on top. But the secret sauce is 2-3 layers below, where the dragons be. Rethink: DNS + Firewall + VPN was updated to v0.5.5w after almost one year. What did we miss? An UI rewrite in Material 3, new configuration options, plenty of fixes, and more. Read this and this to get up to speed. Archived Apps 1 more app was archived WalletCount: A money management app for your wallet Newly Added Apps 23 more apps were newly added For some "unknown reason" since about 9 months ago, more previously unfamiliar FLOSS developers started to consider F-Droid a good place to distribute and host their apps. We welcome such a wave of increased interest, and we ask developers to bear with us while we juggle between infra maintenance, client 2.0 development and their submissions. We thank @linsui for merging all these below and hundreds more during these months. We also thank contributors taking the time to help with app submissions review, testing builds and offering feedback. For them we've setup the "Reviewing new apps" Wiki page to offer step by step guidance of what it takes for an app to be tested before inclusion, and, depending on changes, during updates. Scroll down in comments to find an useful checklist that can keep one organized during a review. You are welcome to join the TWIF forum thread. If you have any news from the community, post it there, maybe it will be featured next week To help support F-Droid, please check out the donation page and contribute what you can.

- We didn't choose the pastel colors (2026/06/12 00:00)
  This Week in F-Droid TWIF curated on Friday, 12 Jun 2026, Week 24 F-Droid core F-Droid and F-Droid Basic were updated to 2.0-alpha10. We tooted a toot that you can read here, and yes, we are like an inch (or 25.4 mm if you’re on metric) close to release, do test it on your device

today: mess around with Material colors, do all screens look fine and readable? install some apps and updates, do they get downloaded fast from mirrors? your Chinese device can install apps or just gives up randomly? the UI looks nice on your smart TV or is it hard to navigate? the app is translated fully or some strings need more work? are the meta categories enticing? any other issue we should know about? You've read above and want to help? Get the latest 2.0-alpha by navigating to the F-Droid or Basic app details page and check "Allow beta updates" in the top right three dot menu. Community News baresip was updated to 83.1.0 and its video enabled counter-part baresip+ to 72.1.0. These apps have been in F-Droid since 2018 and 2020 respectively, so they're not "new" to the Android ecosystem and to Google's vast surveillance system that spies on what apps users have installed, yet we are sad to see our packages being treated as malware and both users and developers getting abused. Also Syncthing-Fork was updated to 2.1.1.0 and got the same FUD treatment from Google's root-kit-like services that swear they want to protect the users. Is Google protecting you or their share-holders? Time is short, keepandroidopen.org has some actionable ideas. Can you help? Fedilab was updated to 3.41.0 adding the new "Collections" feature. What are those? We'll just let the Mastodon devs to explain in a post. Flip 2 DND was updated to 12.1.1-free after we skipped some versions. The developer lost, forgot, burned, deleted or just plain changed the key, hence it now has a new one. You had the app installed last week? Better uninstall and install the new one. Notifications for FB was updated to 1.12.0 after… 9 years! While we can frown upon your usage of such an awful abusing silo, at least you can get notified in a better way. While we featured ReFra two weeks ago, they deserve a mention yet again with update 5.0.0. Why? They've added Immich integration (ownCloud soon too) so you can browse remotely just like locally, cloud photo backup, backup wizard, more editor effects & filters, date grouping, albums sections, motion photos as MP4, Android Advanced Protection support, more location details, better APNG & JXL support, more performance enhancements and more. Newly Added Categories 3 categories were newly added Recorder: Audio, screen, call recorder Camera: Camera, IP camera viewer and video recorder Market & Price: Price, exchange rate, stock Newly Added Apps 34 apps were newly added Alchemist: Start with the four basic elements and create anything! AppVerifier BG: Verify installed apps against shared signature hashes and databases Conduit: Local-first SSH, Mosh, and SFTP for mobile drejo player: Tiny ad-free player with reliable next/previous across mp4 + mkv folders Email: A modern email client with a unified inbox Ensemble: Unofficial client for Music Assistant Entropy's Defiance: Minimalist launcher and time-horizon task manager Epoch: Time display for nerds: Unix, sidereal, binary clocks & more Flac-R: Perfect your collection Health: A health metric management health meant to replace Google Fit Hermes Agent Fork: Run local AI models with chat, files, voice, and Android tools Hisap Kitap: Shop ledger and billing app for small businesses Kochi Transit Go: Offline Kochi Metro route planner and fare calculator. Fast, Free & Private. LineShield: Verify phone lines registered to your name in Mexico CRT portals Linthra: Local-first music player for music you own. No forced sync. You are welcome to join the TWIF forum thread. If you have any news from the community, post it there, maybe it will be featured next week To help support F-Droid, please check out the donation page and contribute what you can.

- Take a pause, meditate (2026/06/05 00:00)
  This Week in F-Droid TWIF curated on Friday, 05 Jun 2026, Week 23 Community News AirPlay Server, AirPlay receiver implementation with video and audio support, was just added pairing with Mirror for streaming between devices or straight from other AirPlay compatible devices out there. Bold Bitcoin Wallet has a huge update to 4.0.0, you’ll just have to read for yourself here. FairEmail was updated to 1.2318 and now it requires Android 6 or later. Inner Breeze was updated to 1.5.0 as the last version, the upstream source repo was archived. But, the app has a new start, as we’ve included Inner Breeze, yes same name, same developer, but different appid. If you’ve had the app installed before, better switch now to get updates. MakeACopy – OCR Latin (Best) was archived as MakeACopy, updated to 4.3.0 this week, already covers its use case. One less app to keep installed. While the Briar apps are in maintenance mode for a while now, another team has built an app on their protocol. The newly included Zerion, Private messaging over Tor. No phone, no email. Now with channels., promises a lot of features. Since we’ve added the latest version you can read the explainer post and maybe peek at the older posts too for more in-depth knowledge. @shuvashish76 feeds our FOMO: App Manager celebrates 6 years of existence in a dev post. While we don’t track you, the user, we have some downloads stats (main server only) here or here or here, that might answer some dev questions. DetoxDroid: Digital Detoxing as Your New Default was updated to 2.4.0 helping you doomscroll less. No, you don’t need AI or the latest greatest phone released yesterday, DetoxDroid can help you take pauses from the digital realm and keep you in control… of you. Mullvad had a new security assessment of the app with minimal fixes needed. Prav developers explain how the service is funded and make an appeal for donations to keep the sign-in function alive. If you believe in decentralized, open protocols for communication, built on FLOSS, Prav and its upstream Quicksy, are the entry points for your less tech-savvy friends, and they need your help. Torrent Search was updated to 0.5.0 with many changes like, torrent details screen, better browser, view markers, better filtering, categories and more. wallabag was updated to 2.6.0 after a two year pause, with translations updates, fixes and more. Archived Apps 2 more apps were archived AndroidCrypt: AES Crypt compatible file encryption utility (It use the non-free aescrypt lib) Hermes Agent: Run local AI models with chat, files, voice, and Android tools. (Replacement coming soon!) Newly Added Apps 36 more apps were newly added 2026 Football Fixtures Widget: 2026 football fixtures and widgets. Acho: Lightweight WebView client for Acho Chat Acoustic: Simple internet radio app Albi: A health tracking

app that respects your privacy Android IP Camera: An MJPEG IP Camera app Appstract Icon Pack: Abstract icon pack with 590 hand-designed icons Autu Mandu: Control the income and expenses of your vehicles Backlog Tracker: Calculate, track, and defeat compounding academic backlogs C2K — Couch to 5K & 10K: C25K/C210K running trainer.
