- PlasmaTube (2026/11/03 19:33)
  Watch YouTube videosPlasmaTube allows you to watch YouTube videos on your phone or desktop using a elegant user interface integrated with the rest of Plasma. Additional information:Developer: KDELicense: GPL-3.0-or-laterVersion: 26.08.1
- Dissent (2026/11/03 19:23)
  Tiny native Discord app Dissent (previously gtkcord4) is a third-party Discord client designed for a smooth, native experience on Linux desktops. Built with the GTK4 and libadwaita for a modern look and feel, it delivers your favorite Discord app in a lightweight and visually appealing package. Dissent offers a streamlined Discord experience, prioritizing simplicity and speed over feature completeness on par with the official client. Here's what you can expect: Text chat with complete Markdown and custom emoji support Guild folders and channel categories Tabbed chat interface Quick switcher for channels and servers Image and file uploads, previews, and downloads User theming via custom CSS Partial thread/forum support Partial message reaction support Partial AI summary support (provided by Discord) It does not aim to support voice chat and other advanced features, as these are best handled by the official client or the web app. Additional information:Developer: diamondburnedLicense: GPL-3.0+Version: v0.0.37
- Shotwell (2026/11/03 19:17)
  Digital photo organizer Shotwell is an easy-to-use, fast photo organizer designed for the GNOME desktop. It allows you to import photos from your camera or disk, organize them by date and subject matter, even ratings. It also offers basic photo editing, like crop, red-eye correction, color adjustments, and straighten. Shotwell’s non-destructive photo editor does not alter your master photos, making it easy to experiment and correct errors. When ready, Shotwell can upload your photos to various web services, such as Flickr, Google Photos, and more. Shotwell supports JPEG, PNG, TIFF, and a variety of RAW file formats. Additional information:Developer: The Shotwell developersLicense: LGPL-2.1+Version: 33.0
- indiDatabase (2026/11/03 18:47)
  Build your own database — no programming requiredindiDatabase is a desktop database for people who are not programmers, in the tradition of FileMaker Pro and Lotus Approach. Design tables, draw forms, save finds, and print reports — everything lives in one file on your own computer, and the whole office can work in it together over your own network with no server product and no cloud. Features include: Tables designed point-and-click, with nine field types including exact decimal amounts for money Forms drawn for each table, with find-by-filling-in-the-form, related-record panels, and buttons that run the day's routine Six kinds of reports: grouped lists, certificates, Avery label sheets, form letters, crosstabs, and charts — with questions asked when a report runs Saved finds with found-set counts, and a Summarise mode that groups and totals without a formula Calculated fields, summary fields over related records, validation rules, starting values, and relationships on one field pair or several Conditional formatting and named styles, stored in the file so every desk draws the same warnings A Home dashboard of pinned reports and worksheets, the same on every desk Multi-user sharing on your own network: pairing codes, TLS with pinned fingerprints, live updates, record locking by name, and a field-by-field merge when two people collide Users, roles, record-level and field-level security, and an audit trail stamped by the engine Import from CSV and legacy dBase files (including FoxPro-era memo files); export the found set to CSV Automatic backups with restore points, taken safely while the file is in use indiDatabase respects your privacy and works entirely offline. Your database is a single SQLite-backed file on your own computer and never leaves your machine. Additional information:Developer: Indomitus GroupLicense: LicenseRef-proprietary=https://indomitusgroup.com/indidatabase/indidatabase-license/Version: 1.5.0
- Seamly2D (2026/11/03 17:47)

Sewing pattern design softwareSeamly2D is pattern design software to create reusable, scalable, sharable custom-fit patterns using bespoke tailoring, haute couture, and historical pattern drafting techniques. Seamly2D saves time and improves fit by creating patterns that are reusable parametric CAD engineering documents. Unlike other pattern design software, Seamly2D allows designers to have complete control of the patternmaking process. Each reusable, scalable pattern can read multi-size tables for boutique sizing, and read individual measurement files for custom-fit. Seamly2D is open source software released under the GPLv3+ license. Seamly2D is available for Windows, MacOS, and Linux. Learn more about Seamly2D by joining our active, friendly community at https://forum.seamly.io Additional information:Developer: Seamly2D projectLicense: GPL-3.0+Version: v2026.11.2.131

- Pixelorama (2026/11/03 17:46)
  Pixel Art & AnimationUnleash your creativity with Pixelorama, a powerful and accessible open-source pixel art multitool. Whether you want to create sprites, tiles, animations, or just express yourself in the language of pixel art, this software will realize your pixel-perfect dreams with a vast toolbox of features. Additional information:Developer: Orama InteractiveLicense: MITVersion: 1.2.4
- QGIS Desktop (2026/11/03 17:38)
  A Geographic Information SystemQGIS is a user friendly Open Source Geographic Information System (GIS) licensed under the GNU General Public License. QGIS is an official project of the Open Source Geospatial Foundation (OSGeo). It runs on Linux, Unix, Mac OSX, Windows and Android and supports numerous vector, raster, and database formats and functionalities. Additional information:Developer: QGIS Development TeamLicense: GPL-2.0+Version: 4.2.3
- Aurora Media Player (2026/11/03 17:32)
  Listen to music, watch local and online videosAurora is a modern media player with a clean GTK4 interface for watching videos, listening to music, and opening online media. It supports most common video and audio formats, playlists, subtitle and audio track selection, session restore, recent files, album art, and MPRIS desktop media controls. Additional information:Developer: Dani AcostaLicense: GPL-3.0-or-laterVersion: 0.4.1
- Fluxer (2026/11/03 17:11)
  A chat app that puts you firstFluxer is a free and open-source instant messaging and voice-over-IP application. It provides text chat, voice calls, video calls, and screen sharing in a modern interface. Features include: Text messaging with rich formatting and media support Voice and video calls Screen sharing Communities with channels Direct messages and group chats Custom emoji and reactions Additional information:Developer: FluxerLicense: AGPL-3.0-or-laterVersion: 2026.1103.130233
- Faugus (2026/11/03 17:09)
  A simple and lightweight app for running games using UMU-LauncherFaugus is a simple and lightweight application for running Windows games using UMU-Launcher. Main Features: Play Windows games using Proton Play Linux native games Run Windows games directly from the .exe file Prefix management Shortcut and Steam shortcut management Integrated tools: Winetricks: A helper tool to easily install dependencies, fonts, DLLs, and tweaks for Wine. Winecfg: Wine's graphical interface to configure Windows versions, libraries, drivers, and integrations. MangoHud: Shows an overlay for monitoring FPS, temperatures, CPU/GPU load and more. Feral GameMode: Tweaks your system to improve performance. Prefer SDL: May fix controller issues in some games. Additional Application: An additional application to run with the game, like Cheat Engine, Trainers, Mods... Lossless Scaling Frame Generation: Create fake frames to increase the framerate. Proton Manager: Download/Remove popular Proton builds. Wine Wayland Driver support (Experimental). HDR Support (Experimental). Flatpak known issue: Gamescope doesn't work.

Additional information:Developer: FaugusLicense: MITVersion: 2.5.7

- itch (2026/11/03 17:06)
  Install, update and play indie gamesThe itch.io app, itch, lets you effortlessly download and run games and software from itch.io. All of your downloads are kept in a single place and are automatically updated. Access your collections and purchases, or browse for new games via the in-app browser. Browse games like the creator intended. On itch.io creators control how their project pages look. The built in browser lets you download and install games while exploring the unique page designs of our creators. Always updated. Not only will the games you've installed automatically update, the app itself will automatically transform as we launch new functionality and features. Games using our new command line tools will generate delta patches, ensuring that you only download what's changed when new games come out. Browser games offline. You can sync any browser based games right into the app, letting you play them offline whenever you want. Once you're back online you'll be able to grab any updates if necessary. Join the community. Learn more about the development of the app in our community. Share feature requests and general feedback with other members of itch.io. If you're a programmer then you'll be glad to hear that the entire project is open source on GitHub, we look forward to your pull requests. Available in your language. The itch app is available in over 20 languages, thanks to the itch.io community! Additional information:Developer: itch.ioLicense: MITVersion: 26.22.0
- RNGremlin (2026/11/03 17:04)
  Solo TTRPG dice rollerRNGremlin is a dice rolling application with a pixel art aesthetic intended for use with solo TTRPGs but isn't necessarily limited to that use case. It was originally built using Godot 3.6 in order to support older hardware for anyone making use of a repurposed laptop, etc. but has been converted to Godot 4 in preparation of being packaged for flatpak. Features Generate up to five results simultaneously Select various die types (d4, d6, d8, d10, d12, d20 or d100) or leave a particular position off Select from various light and dark themes Auto save/load so that you can resume your session exactly as you left off UI sound effects, which can be toggled on/off Visual roll history, which can be cleared at any point Keyboard shortcuts if you don't / can't use a mouse Keyboard Shortcuts Number row keys 1-5: change the die type for that position R: "roll" / generate the results T: change the theme S: toggle the sound effects on/off C: clear the history and die results Escape: quit the application F1: opens the help menu X: closes the help menu Additional information:Developer: John BeersLicense: GPL-3.0+Version: 2.1.1
- MusicBrainz Picard (2026/11/03 16:33)
  Picard is a cross-platform music tagger powered by the MusicBrainz databaseDo you need to clean up your music library? Picard is an open-source cross-platform music tagger by MusicBrainz. It has the ability to identify audio files even without any existing metadata. Picard helps you organize your music collection by renaming your music files and sorting them into a folder structure exactly the way you want it. A variety of plugins are available and you can even write your own. Picard supports a wide range of audio formats and can also lookup an entire CD for you. Tagging audio files has never been easier. Features: Multiple formats: Picard supports all popular music formats, including MP3, FLAC, OGG, M4A, WMA, WAV, and more. AcoustID: Picard uses AcoustID audio fingerprints, allowing files to be identified by the actual music, even if they have no metadata. Comprehensive database: Picard uses the open and community-maintained MusicBrainz database to provide accurate information about millions of music releases. CD lookups: Picard can lookup entire music CDs with a click. Plugin support: If you need a particular feature, you can choose from a selection of available plugins or write your own. Scripting: A flexible but easy to learn scripting language allows you to exactly specify how your music files will be named and how the tags will look like. Cover Art: Picard can find and download the correct cover art for your albums. Open Source: Picard is licensed under the GNU General Public License 2.0 or later, and is hosted on GitHub where it is actively developed

by some awesome developers. Additional information:Developer: MetaBrainz FoundationLicense: GPL-2.0-or-laterVersion: 3.0.4

- Mullvad Browser (2026/11/03 16:20)
  Free the internet from mass surveillanceThe Mullvad Browser is a privacy-focused web browser developed in a collaboration between Mullvad VPN and the Tor Project. It’s designed to minimize tracking and fingerprinting. You could say it’s a Tor Browser to use without the Tor Network. Instead, you can use it with a trustworthy VPN. The idea is to provide one more alternative – beside the Tor Network – to browse the internet with more privacy. To get as many people as possible to fight the big data gathering of today. To free the internet from mass surveillance. Additional information:Developer: Mullvad VPN ABLicense: MPL-2.0Version: 16.0
- EDuke32 (2026/11/03 16:10)
  EDuke32 is an awesome, free homebrew game engineEDuke32 is a source port of Ken Silverman's Build Engine with support for Duke Nukem 3D, Ion Fury and Shadow Warrior (via VoidSW), among others. Features include: Modern OpenGL rendering with dynamically lighting and shadows Voxel assets Emulated OPL3, MIDI or OGG/FLAC soundtracks Gamepad support Classic software rendering EDuke32 comes with a map editors, Mapster32 and Wangulator, for creation of new levels and is free to use for non-commercial purposes. Additional information:Developer: Richard "TerminX" GobeilleLicense: GPL-2.0-only AND LicenseRef-proprietary=https://www.eduke32.com/buildlic.txtVersion: 20260807-10669-ec5824db8
- Clustta (2026/11/03 16:03)
  Version control for creative workClustta simplifies file management, collaboration and version control for creative workflows. It provides a familiar, intuitive interface for managing assets, tracking changes, and collaborating with your team - designed specifically for creative professionals working with large files. Features include: Version control optimised for large binary files (images, video, audio, 3D models) Visual asset browsing with thumbnails and metadata Checkpoint-based history - save, compare, and restore any version Real-time collaboration with studio teams Organise assets with collections, tags, and dependencies Works offline - sync when you're ready Additional information:Developer: EaxumLicense: AGPL-3.0-or-laterVersion: 0.4.42
- Deskflow (2026/11/03 16:00)
  Software Keyboard and mouse sharingUse the keyboard, mouse, or trackpad of one computer to control nearby computers, and work seamlessly between them. Additional information:Developer: Deskflow DevelopersLicense: GPL-2.0-onlyVersion: 1.27.0
- Overlayed (2026/11/03 15:39)
  A Discord overlaySee who's speaking in your Discord voice channel with a movable overlay, compatible with almost every game or app. User List - See who is speaking, muted, and deafened in the current voice channel Pinnable - Always stays on top so you can continue working or gaming Transparent - Transparent window that can ignore mouse clicks Join History - See who enters and leaves a channel Additional information:Developer: Team OverlayedLicense: GPL-3.0-onlyVersion: 0.6.2
- GPU Screen Recorder (2026/11/03 15:36)
  A shadowplay-like screen recorder for Linux. The fastest screen recorder for LinuxThis is a screen recorder that has minimal impact on system performance by recording a monitor using the GPU only, similar to shadowplay on windows. This is the fastest screen recording tool for Linux. This screen recorder works on X11 and Wayland on AMD, Intel and NVIDIA. This screen recorder can be used for recording your desktop offline, for live streaming and for nvidia shadowplay-like instant replay, where only the last few minutes are saved. This flatpak is designed to support hardware video encoding with both old and new GPUs. Supported video codecs: H264 (default) HEVC (Optionally with HDR) AV1 (Optionally with

HDR) VP8 VP9 Supported audio codecs: Opus (default) AAC Supported image formats: JPEG PNG At the moment the program comes with two different UIs. A gtk based one and a new experimental ShadowPlay-like fullscreen overlay UI. The gtk based UI will be removed in the future. You can switch to the new UI by clicking on "Try out the new UI" and then after that is done press Left Alt+Z to open/close it. Videos are in variable framerate format by default. Use MPV to play such videos, otherwise you might experience stuttering in the video if you are using a buggy video player. Alternatively change framerate mode to constant framerate. For more information visit the GPU Screen Recorder homepage. If you use the new UI and also keyboard remapping software such as keyd then make sure you make the keyboard remapping software ignores "gsr-ui virtual keyboard" (dec0:5eba device id), otherwise you may be unable to use your keyboard. You can press (left) ctrl+shift+alt+esc to close gpu screen recorder and remove it from system startup if this happens. You should also change hotkeys option in gpu screen recorder to only grab virtual devices when using keyboard remapping software. GPU Screen Recorder flatpak can install files in $HOME/.local/share/gpu-screen-recorder. If you want to uninstall GPU Screen Recorder then you will have to remove this directory manually. If you tried out the new UI then an xdg autostart desktop entry was added to ~/.config/autostart/gpu-screen-recorder-ui.desktop. If you want to uninstall GPU Screen Recorder then you will have to remove that file and ~/.local/share/gnome-shell/extensions/gpu-screen-recorder@dec05eba.com/ as well (if you use GNOME). Additional information:Developer: dec05ebaLicense: GPL-3.0-onlyVersion: 6.1.7

- Qobine (2026/11/03 15:04)
  Unofficial client for QobuzListening to your Qobuz music with Qobine: a Qobuz client designed for GNOME. Upon first launch, a browser spawns where you will need to login to Qobuz with your active streaming subscription. Qobine supports full Qobuz audio quality. But make sure that your pipewire configuration is correct. View and stream your favorite albums, artists and playlists Search the full Qobuz catalogue Add / remove favorites Add to queue / play next Create / edit / delete playlists Additional information:Developer: Sofus AddingtonLicense: GPL-3.0-or-laterVersion: 2026-05-29
