- [Lotti](#) (2026/06/21 11:17)

Open-source private logbook with a local agentic layer Lotti is an open-source personal logbook — tasks, time recordings, voice notes, transcriptions, journal entries, habits, and health data — paired with an agentic layer of long-living AI agents that observe, suggest, summarise, and nudge. The agents run on your machine. With a powerful enough device, the model they call can run locally too — meaning your data never has to leave the device at all. On lighter hardware, or when you need to save battery, you keep the same agentic experience and route inference to a cloud provider you choose, on a per-category basis. No accounts, no telemetry, no cloud storage. End-to-end encrypted multi-device sync runs over Matrix using Vodozemac (Rust) for Megolm crypto; the homeserver you bring relays only ciphertext between your own devices. What it does: Long-living AI agents (mission, soul, report directive) that read your logbook, propose changes, and only act after you approve Two-database architecture: a strict separation between your facts (the user database) and what the agents think (the agentic database), enforced on disk Run reasoning-capable models locally via oMLX or Ollama (e.g. Qwen 3.6 35B A3B, a Mixture-of-Experts model with ~3B active parameters) — or use Gemini Flash, OpenAI, Anthropic, Mistral, or any OpenAI-compatible cloud provider, on a per-category basis Local voice transcription with Whisper or Voxtral; cloud transcription via Gemini, OpenAI, or Mistral AI-generated cover art for tasks via Nano Banana Pro on Gemini, OpenAI, or Qwen Both the logbook and the agentic state sync end-to-end encrypted Habit tracking with success/fail/skip completion types, custom measurables, dashboards, and time recording Bring-your-own API keys for cloud providers, with jurisdiction choice per category (US, EU/GDPR-compliant, or Chinese) Additional information:Developer: Matthias NehlsenLicense: GPL-3.0-onlyVersion: 0.9.1031

- [Tuneline](#) (2026/06/21 10:36)

Play any media playlist Tuneline is a cross-platform media player that loads your own media playlists. Bring your own M3U file, Xstream credentials, or portal URL and Tuneline plays them with a clean, modern interface. Features: Load M3U, Xstream, and Stalker-format playlists Electronic program guide with a schedule view Favorites and watch history Hardware-accelerated video playback via libmpv Additional information:Developer: TunelineLicense: LicenseRef-proprietary=https://tuneline.app/termsVersion: 1.0.74

- [FluffyChat](#) (2026/06/21 10:31)

Chat with your friendsFluffyChat is an open source, nonprofit and cute matrix messenger app. The app is easy to use but secure and decentralized. Features Send all kinds of messages, images and files Voice messages Location sharing Push notifications Unlimited private and public group chats Public channels with thousands of participants Feature rich group moderation including all matrix features Discover and join public groups Dark mode Hides complexity of Matrix IDs behind simple QR codes Custom emotes and stickers Video calls via sharing links to Jitsi Spaces Compatible with Element, Nheko, NeoChat and all other Matrix apps End to end encryption Emoji verification & cross signing And much

more... FluffyChat comes with a dream Imagine a world where everyone can choose the messenger they like and is still able to chat with all of their friends. A world where there are no companies spying on you when you send selfies to friends and lovers. And a world where apps are made for fluffiness and not for profit. ♥ Additional information:Developer: Krille-chanLicense: AGPL-3.0-onlyVersion: 2.6.0

- [Quetoo](#) (2026/06/21 10:30)

A free first person shooter for Mac, PC and Linux Quetoo ("Q2") is a free first person shooter for Mac, PC and Linux. Our goal is to bring the fun of oldschool deathmatch to a new generation of gamers. We're pwning nubz, one rail slug at a time. Deathmatch, Team DM, Capture the Flag, Instagib and Rocket Arena gameplay modes High quality remakes of id Software's legendary Quake series deathmatch levels, as well as many originals Realtime lighting with soft shadowmapping Steep parallax occlusion mapping with self-shadowing Dramatically improved artwork pipeline with in-game editor for level artists TrenchBroom support 100% free to download, play and modify. Source code licensed under GPL v2, artwork under Creative Commons. Additional information:Developer: jdolanLicense: GPL-2.0+Version: 1.0.47

- [TreeSheets](#) (2026/06/21 10:24)

Free Form Data Organizer A "hierarchical spreadsheet" that is a great replacement for spreadsheets, mind mappers, outliners, PIMs, text editors and small databases. Suitable for any kind of data organization, such as todo lists, calendars, project management, brainstorming, organizing ideas, planning, requirements gathering, presentation of information, etc. It's like a spreadsheet, immediately familiar, but much more suitable for complex data because it's hierarchical. It's like a mind mapper, but more organized and compact. It's like an outliner, but in more than one dimension. It's like a text editor, but with structure. Additional information:Developer: Wouter van OortmerssenLicense: ZlibVersion: 3211

- [Desktop Plus](#) (2026/06/21 07:05)

Git client with advanced functionality and Bitbucket, GitLab integration This is an up-to-date fork of GitHub Desktop, with many quality of life improvements and advanced features for power users. See <https://github.com/pol-rivero/github-desktop-plus> for a full list of added features. Additional information:Developer: Pol RiveroLicense: MITVersion: 3.5.13.2

- [Flameshot](#) (2026/06/21 06:24)

Take and annotate screenshots Powerful and simple to use screenshot software with built-in editor with advanced features. Features: Customizable appearance Very easy to use In-app screenshot editing and annotation Dbus interface Upload to Imgur Additional information:Developer: Flameshot DevelopersLicense: GPL-3.0-or-laterVersion: 14.0.0

- [Lumoria](#) (2026/06/21 05:56)

Play a classic MMORPG on Linux Lumoria is a native Linux installer and launcher for a classic MMORPG. Install the game, manage Wine prefixes, runners, and all the other stuff you need to get playing ... All from a single app! Supports DXVK, Windower 4, multiple game installations with independent configurations, gamepad navigation and more. Additional information:Developer: Lumoria ContributorsLicense: GPL-3.0-or-laterVersion: 0.1.19

- [Klia Store](#) (2026/06/21 04:56)

Flatpak application storeA modern application store for managing Flatpak applications. Additional information:Developer: N3koSempaiLicense: LicenseRef-proprietary=<https://github.com/N3koSempai/KliaStore/blob/master/LICENSE.md>Version: 2.10.3

- [Open Orpheus](#) (2026/06/21 03:19)

Netease Cloud Music for Linux\*\*This app is only available in Chinese.\*\* Open Orpheus is an open-source implementation of Netease Cloud Music

browser host, it allows the user to run Netease Cloud Music official client's web resources on Linux, with the best compatibility provided by this host. Additional information:Developer: YUCLingLicense: MITVersion: 0.15.0

- [AppFlowy](#) (2026/06/21 03:18)

Open Source Notion AlternativeAppFlowy is a privacy-first open source workspace for your notes, tasks, databases, and more. Built for individuals who care about data security and mobile experience 100% control of your data Download and install AppFlowy on your local machine You own and control your personal data Built for teams that need more control and flexibility (Coming Soon): 100% data control You can host AppFlowy wherever you want No vendor lock-in Extensively extensible For those with no coding experience, AppFlowy enables you to create apps that suit your needs It's built on a community-driven toolbox, including templates, plugins, themes, and more Truly native experience Faster, more stable with support for offline mode It's also better integrated with different devices Moreover, AppFlowy enables users to access features and possibilities not available on the web Additional information:Developer: AppFlowy developersLicense: AGPL-3.0-onlyVersion: 0.12.4

- [Rio](#) (2026/06/21 02:27)

Hardware-accelerated GPU terminal emulator powered by WebGPURio is a hardware-accelerated GPU terminal emulator. It is designed to be fast and efficient, with a focus on performance and usability. Rio is built using the latest technologies, including Rust and WebGPU, to provide a modern and responsive user experience. It supports a wide range of features, including split panes, tabs, and customizable themes. Rio is open source and available for Windows, macOS, and Linux. Additional information:Developer: Raphael AmorimLicense: MITVersion: 0.4.5

- [Danceinterpreter](#) (2026/06/21 01:27)

Utility for displaying song infosThe Danceinterpreter is a utility to display songs and their according dances at ballroom dance events It currently contains three source modes M3U / M3U8 files with references to local mp3 files A connection to a running Traktor Pro instance Manually added songs and static dance labels Additional information:Developer: Klassenserver7bLicense: GPL-3.0+Version: 0.8.3

Solitaire game compilationA collection of more than 1200 Solitaire games, using various deck types including international standard, hex-a-deck, mahjongg, and hanafuda. Additional information:Developer: PySolFCLicense: GPL-3.0-or-laterVersion: 3.6.0

- [ScummVM](#) (2026/06/21 00:36)

Interpreter for numerous adventure games and role-playing games ScummVM is a program which allows you to run a wide variety of classic graphical point-and-click adventure games and role-playing games, provided you already have their data files. The clever part about this: ScummVM just replaces the executables shipped with the game, allowing you to play them on systems for which they were never designed! Currently, ScummVM supports a huge library of adventures with over 250 games in total. It supports many classics published by legendary studios like LucasArts, Sierra On-Line, Revolution Software, Cyan, Inc. and Westwood Studios. Next to ground-breaking titles like the Monkey Island series, Broken Sword, Myst, Blade Runner and countless other games you will find some really obscure adventures and truly hidden gems to explore. Additional information:Developer: The ScummVM TeamLicense: GPL-3.0-or-laterVersion: 2026.3.0

- [Fuse](#) (2026/06/21 00:13)

Sinclair ZX Spectrum Emulator Fuse is an emulator of the Sinclair ZX Spectrum home computer. It supports all of the original models and some clones, with quite faithful emulation of the display and sound. Fuse can load most formats of snapshots, tapes and floppy disks and it can emulate many peripherals such as joysticks, printers, storage devices and network interfaces, among others. Additional information:Developer:

The Fuse development team License: GPL-2.0+Version: 1.9.0

- [Floorp](#) (2026/06/20 23:28)

Customizable Firefox-based browser from Japan Unlimited Customization For Everyone Enable more advanced customization than your default browser. Floorp is based on the smart Firefox, and enhances functionality and flexibility while maintaining security and privacy. What can Floorp do for you? Flexible UI Customization: Floorp's most distinctive feature is its customizability. Floorp is the first Firefox-based browser to enable UI customization, designed so that anyone can easily adjust their browsing experience to their preferences and access the web with ease. Various Ways to Browse the Web: Floorp features workspaces that integrate tab groups with containers that can separate login information. Additionally, you can easily access social media and chats through web panels. Various Control Methods Supported: Browse more efficiently with mouse gestures and customizable keyboard shortcuts. Of course, it's also designed to be easily operated with a mouse. Development and Research Focused: Floorp actively pursues experimental browser development. It's a browser that continuously incorporates new technologies and ideas, and energetically improves based on community feedback. Aiming for a Sustainable Web: We respect users' rights and contribute to building an open and sustainable web ecosystem. Let's create the future of the internet together for the next generation. Additional information: Developer: Ablaze License: MPL-2.0 Version: 12.15.2

- [Unciv](#) (2026/06/20 22:10)

Turn-based strategy game A reimplement of the most famous civilization-building game ever—fast, small, no ads, free forever! Build your civilization, research technologies, expand your cities and defeat your foes! The world awaits! Will you build your civilization into an empire that will stand the test of time? Additional information: Developer: Yair Morgenstern License: MPL-2.0 Version: 4.20.15

- [Hosty](#) (2026/06/20 22:02)

Host Minecraft servers Hosty simplifies the process of creating and managing Minecraft servers on Linux. It removes technical barriers by automating the installation of necessary server files and handling the required Java runtimes for you. Built-in Modrinth browser for easy discovery and mod installation Integrated Playit support for hosting without manual port forwarding Graphical interface for viewing performance and editing server properties Dedicated tools to create and restore server backups Additional information: Developer: Sugarycandybar License: GPL-3.0-or-later Version: 1.7.6
