

Flathub Packages

- [Fuse](#) (2026/03/24 13:26)
Sinclair ZX Spectrum Emulator Fuse is an emulator of the Sinclair ZX Spectrum home computer. It supports all of the original models and some clones, with quite faithful emulation of the display and sound. Fuse can load most formats of snapshots, tapes and floppy disks and it can emulate many peripherals such as joysticks, printers, storage devices and network interfaces, among others. Additional information:Developer: The Fuse development teamLicense: GPL-2.0+Version: 1.6.0
- [Reversi](#) (2026/03/24 13:23)
Dominate the board in a classic reversi game, or play the reversed variant Reversi is a two-player strategy game, played on an 8 by 8 board. Players use tiles that are dark on one side and light on the other. The object of reversi is to flip your opponent's tiles to your color, while your opponent is trying to flip your tiles to his own color. Opponent's tiles are flipped when trapped between an already placed tile of your color and the tile you add. Who finishes with more tiles wins! Reversi allows you to play both a classic reversi game, and the reversed variant, where the goal is to finish with less tile than your opponent. Additional information:Developer: The Reversi TeamLicense: GPL-3.0+Version: 3.38.1
- [Rclone UI](#) (2026/03/24 13:18)
The GUI for rclone. The best way to manage your rclone remotes & tasks in a light and easy way. Free to use & open source. Stop remembering flags, copy pasting commands, and wasting time. Features: Cross platform running on Windows, Linux, macOS (x64, Arm and Apple Silicon) Works with your existing rclone installation (or can install rclone for you) File Browser 2.0 Proxy support Sync, Download, Copy, Mount, Serve, Move, and more Transfers (see all background operations) Set default flags for each remote separately, based on the operation (mount, copy, etc) Customize the flags when running an operation on a case by case basis (on top of defaults) Set a password for the Settings panel Hide commands or remotes from the tray menu Import/Export Configs (encrypted with pass or command) No tracking, no ads. Do more with Rclone! Additional information:Developer: Rclone UILicense: Apache-2.0Version: 3.5.0
- [Morse](#) (2026/03/24 12:38)
Learn Morse CodeLearn Morse Code and High Speed Telegraphy. Additional information:Developer: Jaühien LavončjeůLicense: GPL-3.0-or-laterVersion: 1.0.6
- [Firefox](#) (2026/03/24 12:35)
Fast, Private & Safe Web BrowserWhen it comes to your life online, you have a choice: accept the factory settings or put your privacy first. When you choose Firefox as your default browser, you're choosing to protect your data while supporting an independent tech company. Firefox is also the only major browser backed by a non-profit fighting to give you more openness, transparency and control of your life online. Join hundreds of millions of people who choose to protect what's important by choosing Firefox - a web browser designed to be fast, easy to use, customizable and private.Additional information:Developer: MozillaLicense: MPL-2.0Version: 148.0.2
- [Ultimate Media Downloader](#) (2026/03/24 12:26)
Online video & audio downloader for Linux, 1400+ websites supportUltimate media downloader for Linux allows downloading Video/Audio from thousands of websites on the internet. It allows saving media from websites on Linux Desktop. Ultimate media downloader for Linux works with many sites including Youtube, Facebook, Instagram, Twitter, TikTok, Snapchat, etc Key features of Ultimate Media downloader: Comes with easy

to use Basic Downloader 1400+ supported websites Direct Youtube Video and Audio only Playback with internal player without Ads Youtube Video and Playlist search to download media in bulk Batch media Downloader to download media in bulk Playlist Downloader allows downloading whole playlists Built-In Web browser with AdBlocker, allows session sharing with download engine Download Library Manager manage and interact with downloaded media Dark Theme supports out of the box Widget style switcher Adwaita, Adwaita Dark, and Fusion widget styles Additional information:Developer: Keshav BhattLicense: GPL-2.0-or-laterVersion: 5.6

- [GPU Screen Recorder](#) (2026/03/24 12:25)

A shadowplay-like screen recorder for Linux. The fastest screen recorder for Linux This is a screen recorder that has minimal impact on system performance by recording a monitor using the GPU only, similar to shadowplay on windows. This is the fastest screen recording tool for Linux. This screen recorder works on X11 and Wayland on AMD, Intel and NVIDIA. This screen recorder can be used for recording your desktop offline, for live streaming and for nvidia-like instant replay, where only the last few minutes are saved. Supported video codecs: H264 (default) HEVC (Optionally with HDR) AV1 (Optionally with HDR. Not currently supported on NVIDIA in the flatpak version of GPU Screen Recorder) VP8 VP9 Supported audio codecs: Opus (default) AAC Supported image formats: JPEG PNG At the moment the program comes with two different UIs. A gtk based one and a new experimental ShadowPlay-like fullscreen overlay UI. The gtk based UI will be removed in the future. You can switch to the new UI by clicking on "Try out the new UI" and then after that is done press Left Alt+Z to open/close it. Videos are in variable framerate format by default. Use MPV to play such videos, otherwise you might experience stuttering in the video if you are using a buggy video player. Alternatively change framerate mode to constant framerate. AV1 is currently not supported in the flatpak for Nvidia since GPU Screen Recorder uses an older ffmpeg version to support older Nvidia cards. Install GPU Screen Recorder from source or from AUR if you want to use AV1 on Nvidia. For more information visit the GPU Screen Recorder homepage. If you use the new UI and also keyboard remapping software such as keyd then make sure you make the keyboard remapping software ignores "gsr-ui virtual keyboard" (dec0:5eba device id), otherwise you may be unable to use your keyboard. You can press (left) ctrl+shift+alt+esc to close gpu screen recorder and remove it from system startup if this happens. You should also change hotkeys option in gpu screen recorder to only grab virtual devices when using keyboard remapping software. GPU Screen Recorder flatpak can install files in \$HOME/.local/share/gpu-screen-recorder. If you want to uninstall GPU Screen Recorder then you will have to remove this directory manually. If you tried out the new UI then a systemd service was added to ~/.local/share/systemd/user/gpu-screen-recorder-ui.service. If you want to uninstall GPU Screen Recorder then you will have to remove this file. Additional information:Developer: dec05ebaLicense: GPL-3.0-onlyVersion: 5.12.2

- [OpenTabletDriver](#) (2026/03/24 12:24)

Cross-platform tablet driver toolOpenTabletDriver is an open source, cross platform, user mode tablet driver. The goal of OpenTabletDriver is to be cross platform as possible with the highest compatibility in an easily configurable graphical user interface. **This package requires additional setup before or after installation.** Please check the help page for setup instructions.

(<https://github.com/flathub/net.opentabletdriver.OpenTabletDriver/blob/master/README.md>) Additional information:Developer: InfinityGhostLicense: LGPL-3.0-or-laterVersion: v0.6.6.2

- [KsefInvoice](#) (2026/03/24 11:20)

Faktury KSeF Polska Note: This application is currently only available in Polish. KsefInvoice to nowoczesne fakturowanie z pełną integracją KSeF — za darmo, na zawsze! Jest to w pełni darmowa, bezpieczna aplikacja desktopowa do zarządzania fakturami, kontrahentami i wysyłką do

Krajowego Systemu e-Faktur (KSeF). Bez abonamentu, bez reklam i ukrytych opłat. Twoje dane pozostają lokalnie na Twoim komputerze. Główne moduły i rozszerzone funkcje aplikacji: Integracja z KSeF: Pełna obsługa Krajowego Systemu e-Faktur. Wysyłaj faktury sprzedaży i pobieraj faktury zakupu bezpośrednio z serwerów Ministerstwa Finansów. Obsługa autoryzacji tokenem/podpisem, masowa wysyłka oraz pobieranie UPO. Aplikacja Podatnika (QR): Zgodne z wytycznymi MF generowanie wizualnych kodów QR dla weryfikacji dokumentów offline i podgląd struktury XML. Baza Kontrahentów: Automatyczne pobieranie danych firm z rejestrów GUS, weryfikacja numeru VIES oraz Białej Listy Podatników z obsługą wielooddziałości pod jednym numerem NIP. Fakturowanie i Waluty: Kompletna obsługa dokumentów (Faktury VAT, Korekty, Marża, Ryczałt) w różnych walutach, wzbogacona o automatyczne dociąganie codziennych kursów z Tabeli A (NBP) i tłumaczenie faktur na j. angielski. JPK i Rejestry: Inteligentne generowanie plików JPK_V7M, plików JPK_FA (wsparcie tagów dokumentów m.in. procedur GTU_12/13/odwrotnego obciążenia), oraz uwzględnianie przewalutowań w ewidencji VAT. Rozwiązania Księgowe (Kompensaty): Monitoruj należności i zobowiązania, zarządzaj terminami płatności i korzystaj ze zbiorczych wpłat (kompensat obustronnych na jednym kontrahencie). Ergonomia pracy: Natywne wsparcie ciemnego motywu (Dark Mode) oraz błyskawiczne podglądy statusu opłacenia. Ta wersja jest darmowa i w pełni funkcjonalna, bez reklam i ukrytych opłat. Additional information: Developer: Jarosław Dyszczyński License: LicenseRef-proprietary=<https://github.com/JDyszczyński/pl.ksefinvoice.app/blob/main/LICENSE> Version: 1.0.12

- [Python Molecular Graphics](#) (2026/03/24 11:18)

Molecular visualization and raytracing PyMOL is one of a few open-source visualization tools available for use in structural biology. The Py portion of the software's name refers to the fact that it extends, and is extensible by the Python programming language. PyMOL has the ability to load, manipulate and visualize molecules from a variety of formats and sources. The program can easily be controlled using a menu-driven GUI, or from a large number of commands and/or scripts. A built-in raytracer is available to generate high-quality images of the views generated in the GL portion of the GUI. PyMOL uses OpenGL Extension Wrangler Library (GLEW) and Freeglut, and can solve Poisson-Boltzmann equations using the Adaptive Poisson Boltzmann Solver (apbs). Install this application to view, analyze, and prepare graphics images of proteins and experimental structural data (e.g. crystallographic, NMR and electron microscopy based). Additional information: Developer: Schrödinger, Inc. License: Python-2.0 Version: 3.1.0

- [GNU Image Manipulation Program](#) (2026/03/24 11:17)

High-end image creation and manipulation GIMP is an acronym for GNU Image Manipulation Program. It is Community-driven Free Software for high-end image creation and manipulation. It has many capabilities. It can be used as a paint program, an expert quality photo retouching program, image composition, an online batch processing system, a mass production image renderer, an image format converter, etc. GIMP is expandable and extensible. It is designed to be augmented with plug-ins and extensions to do just about anything. The advanced scripting interface allows everything from the simplest task to the most complex image manipulation procedures to be easily scripted. GIMP is available for Linux, Microsoft Windows and macOS. Additional information: Developer: The GIMP team License: GPL-3.0+ AND LGPL-3.0+ Version: 3.2.0

- [Vikunja](#) (2026/03/24 11:07)

The open-source to-do app Think of Vikunja like the notebook you have with all your things to keep track of. But with superpowers. ☑ Stay organized Organize all of your tasks in projects. Create subprojects organize everything hierarchical and keep related stuff grouped together. ☐ Collaborate with peers Vikunja lets you easily share a project with another user or a whole team! Assignments show who's working on what. ☐ Use it how you need it You can view your tasks in the classic list view -or in a Gantt Chart, or Table view, or Kanban Board! Additional

information:Developer: kolaenteLicense: AGPL-3.0-or-laterVersion: 2.2.0

- [Blender](#) (2026/03/24 10:58)

Free and open source 3D creation suite Blender is the free and open source 3D creation suite. It supports the entirety of the 3D pipeline — modeling, rigging, animation, simulation, rendering, compositing, motion tracking, and video editing. Blender is a public project, made by hundreds of people from around the world; by studios and individual artists, professionals and hobbyists, scientists, students, VFX experts, animators, game artists, modders, and the list goes on. Additional information:Developer: Blender FoundationLicense: GPL-3.0Version: 5.0

- [Apifox](#) (2026/03/24 09:52)

Apifox = Postman + Swagger + Mock + JMeter**NOTE: This wrapper is NOT verified by, affiliated with, or supported by Apifox Team.** Apifox = Postman + Swagger + Mock + JMeter Additional information:Developer: Apifox TeamLicense: LicenseRef-proprietary=https://docs.apifox.com/5734439m0Version: 2.7.46

- [Marknote](#) (2026/03/24 09:44)

Write down your thoughtsMarknote lets you create rich text notes and easily organise them into notebooks. You can personalise your notebooks by choosing an icon and accent color for each one, making it easy to distinguish between them and keep your notes at your fingertips. Your notes are saved as Markdown files in your Documents folder, making it easy to use your notes outside of Marknote as well as inside the app. Additional information:Developer: KDELicense: GPL-2.0-or-laterVersion: 1.5.0

- [Gitpulsar](#) (2026/03/24 09:22)

Git repository manager Gitpulsar is a modern, GNOME-native Git graphical client built with GTK4 and libadwaita. It provides an intuitive interface for managing Git repositories with features like commit browsing, staging, branching, stashing, and side-by-side diff viewing. Features: Multi-repository workspace support with parallel scanning Syntax-highlighted diffs with dark/light theme support Split staged/unstaged lists with drag-and-drop Partial staging — stage individual hunks Undo/redo for staging operations and discards Paginated commit history with async file loading Branch management, tags, stashes with search Remote operations (fetch, pull, push) via git CLI Merge conflict detection and interactive rebase Submodules and worktrees management Commit signing indicator .gitignore editor Adaptive layout for mobile and desktop Additional information:Developer: Ilshat IshdavletovLicense: GPL-3.0-or-laterVersion: 0.4.3

- [Mousam](#) (2026/03/24 09:07)

Weather at a glanceCurrent Weather conditions and forecasts. Features: Displays real-time temperature, humidity, wind speed, UV index, pressure and more Utilizes graphical representations, such as temperature , precipitation graphs and wind-speed with direction to provide an hourly forecast for the next 24 hours Also provides tomorrow and 7-day forecasts See conditions in metric or imperial systems Additional information:Developer: Amit ChaudharyLicense: GPL-3.0-or-laterVersion: 1.4.2

- [Flowkeeper](#) (2026/03/24 08:37)

Pomodoro timer for power users Flowkeeper is a Pomodoro timer with a "classic" cross-platform UI paradigm (desktop-first, no Electron). With its keyboard shortcuts and advanced settings, Flowkeeper is optimized for power users. It stays as close as possible to the Pomodoro Technique definition and format from the original book by Francesco Cirillo. Additional information:Developer: Flowkeeper TeamLicense: GPL-3.0-onlyVersion: 1.0.2

- [materialgram](#) (2026/03/24 07:32)

Googlized TelegramTelegram Desktop based messenger with Material Design and additional features Additional information:Developer: kukuruzka165License: GPL-3.0Version: 6.4.0.1

- [CopyQ](#) (2026/03/24 07:19)

Advanced clipboard manager CopyQ is advanced clipboard manager with editing and scripting features. CopyQ monitors system clipboard and saves its content in customized tabs. Saved clipboard can be later copied and pasted directly into any application. Additional information:Developer: Lukas HoleccekLicense: GPL-3.0+Version: 13.0.0

- [Minecraft: Pi Edition: Reborn](#) (2026/03/24 07:05)

Fun with BlocksMinecraft: Pi Edition Modding Project. NOTE: This is not verified by, affiliated with, or supported by Mojang or Microsoft. Additional information:Developer: TheBrokenRail & Mojang ABLicense: LicenseRef-proprietaryVersion: 3.0.1

- [Epic Asset Manager](#) (2026/03/23 14:19)

Manage your Epic assetsAn unofficial client to install Unreal Engine, download and manage purchased assets, projects, plugins and games from the Epic Games Store Features: Downloading purchased assets from unreal marketplace Downloading official binary Unreal Engine packages Adding assets to projects and creating new projects from assets Listing and launching Unreal projects Listing and launching Unreal Engine installations Additional information:Developer: Acheta GamesLicense: MITVersion: 3.9.4

- [Podman Desktop](#) (2026/03/23 14:16)

Manage Podman and other container engines from a single UIPodman Desktop is an open source graphical tool enabling you to seamlessly work with containers and Kubernetes from your local environment. Build, run and manage containers: Build images from Containerfile or Dockerfile. Pull images from remote registries. Start, Stop, Restart containers and pods. Easily get a terminal in your container. Inspect container logs. Push images to OCI registries. Deploy and test images on Kubernetes. Multiple configuration options Manage OCI registries; add, edit, or delete registries. Configure your proxy settings (work in progress.) Configure CPU, memory, and disk of Podman machines (work in progress.) Handle multiple container engines at the same time (Podman, Docker, Lima...) You can also bring new features with Podman Desktop plug-ins or Docker Desktop extensions. Additional information:Developer: Red Hat, Inc.License: Apache-2.0Version: 1.26.1

- [CoMaps](#) (2026/03/23 14:09)

Free offline maps for everyone CoMaps is a free Android, iOS & Linux offline maps app for travellers, tourists, hikers, drivers and cyclists. It uses crowd-sourced OpenStreetMap data and is developed as a non-profit project by the community. Forever no ads, tracking or data collection! The Linux version of CoMaps does not yet have feature parity with the Android and iOS versions, and has not yet been optimised for mobile devices. We welcome contributions over on our Codeberg! Additional information:Developer: CoMaps CommunityLicense: Apache-2.0Version: 2026.03.23

- [NX Dump Client](#) (2026/03/23 14:03)

Client for dumping over USB with nxdumptoolClient for dumping over USB with nxdumptool. Additional information:Developer: v19930312License: GPL-3.0-or-laterVersion: 1.1.4

- [SABnzbd](#) (2026/03/23 13:52)

Free and easy binary newsreader SABnzbd is a free and Open Source web-based binary newsreader, with support for the popular nzb file format. It greatly simplifies the process of downloading from Usenet, thanks to a friendly web-based user interface and advanced built-in post-processing options including the ability to automatically verify, repair, extract and clean up downloaded posts. It runs anywhere, comes in over a dozen

languages, and integrates with a host of tools, apps and services that help automate the download process. Additional information:Developer: The SABnzbd-TeamLicense: GPL-2.0-or-laterVersion: 4.5.5

- [4KTUBE](#) (2026/03/23 12:42)

4K YouTube Downloader – Download HD YouTube Videos, Playlists, and Music Instantly.ABOUT 4KTUBE : 4KTUBE is a fast, powerful, and user-friendly application designed to download YouTube videos, playlists, and music in high-definition (HD, 4K, 8K) effortlessly. WHY CHOOSE 4KTUBE? One-click YouTube video and audio downloader: Save videos in MP4, WEBM, MP3, and more formats instantly. Download full YouTube playlists: Save entire playlists with a single click. YouTube multi-language audio support: Download videos with multiple dubbed audio tracks. YouTube subtitles and closed captions download: Extract videos with embedded subtitles. Sign-in-required videos: Now you can download sign-in-required videos from YouTube by authenticating your account. Batch downloading: Save multiple videos simultaneously for faster downloads. YouTube music and audio extractor: Convert YouTube videos into high-quality MP3 files. Multi-platform video downloader: Download from Facebook, Instagram, TikTok, Twitter, Twitch, Vimeo, Rumble, Odysee, Bitchute, Reddit, SoundCloud, and 1400+ other platforms. Ad-free YouTube streaming: Play videos without annoying ads. Super-fast download speeds: Optimized for high-speed, high-quality downloads. Search YouTube directly in the app: Find and download videos quickly with regional language support. Lightweight, secure and private: No ads, no trackers, no malware – just seamless downloads. WHAT SETS 4KTUBE APART? Supports 4K and 8K Ultra HD video downloads Optimized for the fastest download speeds Easily Authenticate YouTube account for sign-in-required videos User-friendly, minimalist interface Regular updates with new platform support LANGUAGE SUPPORT : 4KTUBE is available in 35+ popular international languages, including German, French, Spanish, Italian, Dutch, Portuguese, Japanese, Polish, Swedish, Chinese, Russian and more. Additional information:Developer: Warlord SoftwaresLicense: LicenseRef-proprietary=https://raw.githubusercontent.com/rishabh3354/4KTUBE/main/share/license/LICENSEVersion: 2026-03-23

- [Exchange](#) (2026/03/23 12:20)

Convert between XML and BlueprintExchange lets you convert between GTK UI definition formats such as XML and Blueprint. Features: Convert XML to Blueprint Convert Blueprint to XML Automatically detects format when pasting or opening files Additional information:Developer: Shone BinuLicense: GPL-3.0-or-laterVersion: 0.2.1

- [Jellyfin Server](#) (2026/03/23 11:41)

Media Streaming System Jellyfin is the volunteer-built media solution that puts you in control of your media. Stream to any device from your own server, with no strings attached. Your media, your server, your way. About this Flatpak: It includes both the server and a web-based graphical user interface. The web GUI will automatically open in your browser about 10 seconds after you start the app. For more information check the Help and FAQ links below. Additional information:Developer: JellyfinLicense: GPL-2.0-or-laterVersion: 10.11.6
