- [Which package do you use for working with git-flow?](#) (2026/06/21 17:33)  
Hi everyone, I am looking for a reliable git-flow implementation in Arch Linux. I have been using git-flow-avh, but encountered issues with shell autocompletion in my terminal setup. - Which git-flow package or alternative tool from the official repositories or AUR do you currently use? - What specific features or advantages keep you using that particular implementation? Thanks for your feedback. submitted by /u/Just\_Archy\_ [link] [comments]
- [Does anyone how to install WebView2 on arch?](#) (2026/06/21 17:04)  
yeah im trying to run an exe file using wine and i need webview2 submitted by /u/Euphoric\_Dingo\_4867 [link] [comments]
- [Any idea why is the kernel still at 7.0.12?](#) (2026/06/21 16:32)  
Does anyone have any idea why the kernel is still at 7.0.12 when 7.0.13, 7.1, and 7.1.1 are released? I ask because 7.0.12 broke my Bluetooth drivers and while I am in the process of making an account to file a bug report, I was hoping an update beyond 7.0.12 might fix the issue. submitted by /u/kkin1995 [link] [comments]

- [Is there any form of an automatic AUR auditor?](#) (2026/06/21 13:53)  
I have been using Arch for almost 4 years now and have heard of multiple instances where the AUR has been infected either by supply-chain attacks or directly malicious AUR packages. Even recently there was one instance. Is there any way tool that automatically audits for malicious packages? submitted by /u/debiancat [link] [comments]
- [Possible goof. Should I be worried? Dependencies](#) (2026/06/21 13:52)  
So when I use the terminal to update my packages I usually select Yes to remove the dependencies. Now I've been doing this for a while now, not really knowing what I'm doing (still new to Arch). Should I be concerned about this? Have I broken a load of stuff without realising? submitted by /u/powelljackd3 [link] [comments]
- [Full system update broke Kde Plasma \(Wayland\)](#) (2026/06/21 13:25)

I had 640+ updates available and i ran “yay” to do a full system update. After i reboot my PC i logged in with Kde’s login screen which looked normal but when my homescreen came my background was black, there were 3 plasmashell crash windows and the taskbar was non-existent. Claude advised switching to nvidia proprietary drivers with didn’t change anything. Anyone experienced a similar issue or know a solution? I’ve been stuck. Thank you. submitted by /u/New\_Treacle\_8144 [link] [comments]

- [kontakt failed to install](#) (2026/06/21 12:46)

I tried to install Kontakt, but my computer kept failing to retrieve the files, why is this? the errors are: error: failed retrieving file 'kcalendarcore-6.26.0-3-x86\_64.pkg.tar.zst' from mirror.ditatompel.com : Connection timed out after 10002 milliseconds error: failed retrieving file 'kcontacts-1:6.26.0-1-x86\_64.pkg.tar.zst' from mirror.ditatompel.com : Connection timed out after 10002 milliseconds error: failed retrieving file 'ktexttemplate-6.26.0-2-x86\_64.pkg.tar.zst' from mirror.ditatompel.com : Connection timed out after 10002 milliseconds warning: too many errors from mirror.ditatompel.com, skipping for the remainder of this transaction error: failed retrieving file 'grantleetheme-26.04.2-1-x86\_64.pkg.tar.zst' from mirror.ditatompel.com : Connection timed out after 10001 milliseconds error: failed retrieving file 'ksmtp-26.04.2-1-x86\_64.pkg.tar.zst' from mirror.ditatompel.com : Connection timed out after 10001 milliseconds error: failed retrieving file 'ktexttemplate-6.26.0-2-x86\_64.pkg.tar.zst' from kacabenggala.uny.ac.id : The requested URL returned error: 404 error: failed retrieving file 'ktexttemplate-6.26.0-2-x86\_64.pkg.tar.zst' from mirror.citrahost.com : The requested URL returned error: 404 error: failed retrieving file 'ktexttemplate-6.26.0-2-x86\_64.pkg.tar.zst' from mirror.gi.co.id : The requested URL returned error: 404 error: failed retrieving file 'ktexttemplate-6.26.0-2-x86\_64.pkg.tar.zst' from mirror.citrahost.com : The requested URL returned error: 404 error: failed retrieving file 'kcalendarcore-6.26.0-3-x86\_64.pkg.tar.zst' from mirror.ditatompel.com : Operation too slow. - [amdgpu boot issues "\[drm\] Cannot find any crtc or sizes"](#) (2026/06/20 17:17)  
I recently changed my GPU and monitor but didn't bother with an Arch re-install, even though I had this wired issue. I figured it was probably related to some configuration mismatch and would be fixed after a fresh install. Back then, I got passed the issue simply by unplugging and replugging the HDMI cable, or sometimes a few reboots would fix it. Now I have finally done a clean Arch reinstall, and I still have the exact same issue. The problem is that I get past GRUB, but 7 times out of 10, I get no display output. I can blindly log in and run commands btw. The only relevant errors I found in the logs are: amdgpu 0000:01:00.0: [drm] Cannot find any crtc or sizes amdgpu 0000:01:00.0: [drm] Failed to setup vendor infoframe on connector HDMI-A-1: -22 fbcon: amdgpudrmfb (fb0) is primary device I don't think it's relevant for this issue but I'm on hyprland and I don't use any display managers. submitted by /u/DisplayLegitimate374 [link] [comments]
- [How to scroll in archiso live boot console?](#) (2026/06/20 13:01)  
I can't scroll in the terminal/console of my archlinux iso live boot USB. I have tried all combinations of Ctrl + Alt + Fn + (PgUp/PgDn) and (arrow keys) like every suggestion on google. This results in either nothing on the prompt line or just scrolling through the terminal history. Specs: Lenovo Thinkpad Intel i3 from 2016 iirc language: no-latin1 submitted by /u/Arntzen [link] [comments]
- [~200 haskell-\\* updates every other day?](#) (2026/06/20 11:59)  
Hi all, Sorry for dump question, but suddenly I started to get ~200 "haskell-\*..." updates every other day. Is this normal? It happened 3 or 4 times already.... Thanks! Thanks everyone for your answers, it helped me to figured out where packages came from! submitted by /u/ExoPesta [link] [comments]
- [How do you install NVIDIA drivers and CUDA on a hybrid GPU setup?](#) (2026/06/20 11:56)  
For reference, I have a hybrid GPU laptop with an integrated AMD GPU and the mobile version of NVIDIA RTX 4070. I don't remember how or why but I'm using the `nouveau` drivers for my 4070. I've tried RTFM but it's too verbose for me to understand anything. From what I understand, CUDA needs NVIDIA's proprietary drivers to work properly. So, I did `sudo pacman -S nvidia` and I get this error: > error: target not found: nvidia I also know that I need to set up GRUB and SDDM for switching and blacklist the `nouveau` drivers. But, I don't really understand how to do it safely without bricking my system. I have tried to read guides but they're old and suggest using the AUR packages which I want to avoid. Please help this newbie. Edit - Looks like Reddit removed markdown formatting on mobile. submitted by /u/Intelligent\_Cap\_3686 [link] [comments]
- [is Arch a good choice for my ancient laptop?](#) (2026/06/20 10:55)  
4GB ram Intel Celeron N3060 An SSD My younger brother is going to use it. I don't mind teaching him about linux a little bit, he's a fast learner. He's gonna use it mostly to watch YouTube and play games like Undertale, Deltarune, Oneshot, Celeste, and Hollow Knight (not like it can handle anything more than that anyway) The reason I thought of Arch was because I wanted something as debloated as possible in order to run without

lag, but I'm actually thinking of installing CachyOS because I heard it has better optimization or smth. I'm familiar with both. Also, are there any DE/WM that would suit this machine? submitted by /u/NullAli [link] [comments]

- [Pressing Shift+Left/Right arrow key used to select a character to left/right in terminal.](#) (2026/06/20 09:25)

So pressing the shift and right/left arrow key in terminal used to select a character to right/left whether it be vscode terminal or the one comes with OS, but now it just prints ABCD. What do I do to revert back to the old behaviour? To add, I had recently ran 'pacman -Syu' to update my system which I had canceled multiple times in between mainly because it was taking too much time. submitted by /u/Entire\_Condition\_887 [link] [comments]

- [People promote Arch because "there's a lot of programs in the repository" or "it's quickly updated bleeding-edge" but like.. what EXACTLY can you get from Arch that you can't get elsewhere?](#) (2026/06/20 00:17)

I'm new-ish to Linux and recently graduated to Debian after 6 months on Mint. Arch gets a disproportionate amount of attention online, and I'm just trying to understand it. This isn't supposed to be bashing. It seems like the selling point of Arch is that there's a lot of available programs in the repository, and that the updates are very fast. But what specifically are people using that for? I mean, creatives have their own FOSS that's been around for ever and is available on everything. Unless there's some really good video editing/music making software that's only on AUR...??? For "work", all the networking, pen-testing, sysadmin stuff is again available everywhere. Unless I'm missing something...? But I've never heard of professionals using Arch, it seems like they're on Fedora/Red Hat or Debian. People just throw around vague "it depends on your work flow." That's what I'm asking, what, specifically, do YOU use that only Arch offers? Tell me about weird niche programs that are only available on AUR. Tell me about your specific circumstances where you needed the latest update and couldn't get them on a slow-to-update distro. Are there some really important creative/IT software that's only on Arch that I didn't know about (and if so, why isn't it promoted more?) What unique use case and work flow does Arch specifically fit? Tell me something weird and esoteric :D submitted by /u/durdurrrdurr [link] [comments]

- [FluxCast v0.1.2: Native Wayland Miracast for Linux \(Hyprland/Sway/KDE/GNOME\)](#) (2026/06/19 21:51)

Hi r/archlinux, I'm the developer of FluxCast, an open-source tool built to solve the Miracast/Wi-Fi Direct screen mirroring pain on Linux. After landing on the official ArchWiki, I'm pushing v0.1.2 with major fixes for hardware compatibility. What FluxCast does: Native Wayland support: Full compatibility with compositors like Hyprland, Sway and DE like KDE, and GNOME. Low Latency: Uses GStreamer/FFmpeg for real-time RTSP/RTP streaming (~1s delay). Multi-Channel Concurrent (MCC): Works concurrently with your regular Wi-Fi connection, not like Miracast. Easy installation: Available via AUR (fluxcast-git), PyPI, or as a standalone Appliance. Recent Low-Level Fixes & Updates: LG webOS: Solved stream drops caused by randomized P2P MAC addresses during RTSP handshakes. Samsung Tablets & Minimal Sinks: Added force-mode fallback for minimal-capability WFD targets (tested on Galaxy Tab S9 FE). 1200p VESA Support: Implemented native 1920x1200 resolution support for VESA-compliant displays. Performance Tuning: Aligned high-res streams (>1080p) to the ultrafast encoder preset and raised bitrate floors to prevent buffering lag. Hardware Lab Initiative: I'm currently tackling a "tin can" audio bug on the Microsoft 4K Wireless Adapter. As a student developer, I don't have access to every proprietary dongle, so I've started a transparent hardware fund on Ko-fi to build a testing bench. 100% Transparency: All funds go strictly toward used hardware (starting with a \$60 unit in Brno). I will post photos of all acquired gear directly to the GitHub issue tracker for verification. How you can help: If you rely on FluxCast, please consider supporting the testing fund. If not, even testing or providing logs is a huge help! Links: GitHub: <https://github.com/llyaP358/fluxcast> Testing Fund: <https://ko-fi.com/fluxcast> ArchWiki:

[https://wiki.archlinux.org/title/List\\_of\\_applications/Multimedia#Miracast](https://wiki.archlinux.org/title/List_of_applications/Multimedia#Miracast) Happy to answer any technical questions about the implementation, AUR package, or Wayland integration below! submitted by /u/Suspicious-Charity-5 [link] [comments]

- [Force yay to display diffs: `yay --diffmenu --answerdiff All --save`](#) (2026/06/19 13:14)

By default, yay will ask if you want to see the PKGBUILD diffs. This should be "an offer you can't refuse" -- so remove the offer: just show the diffs. The --save will save these settings for future invocations, so it's a one-time fix. submitted by /u/TomHale [link] [comments]

- [AUR Megathread. All discussion on it goes here.](#) (2026/06/16 23:06)

As the title says, I am locking all other AUR posts and don't want to see any new posts. submitted by /u/LinuxMage [link] [comments]

- [FAQ - Read before posting](#) (2018/07/04 22:56)

First read the Arch Linux FAQ from the wiki Code of conduct How do I ask a proper question? Smart Questions XYProblem Please follow the standard list when giving a problem report. What AUR helper should I use? There are no recommended AUR helpers. Please read over the wiki entry on AUR helpers. If you have a question, please search the subreddit for previous questions. If your AUR helper breaks know how to use makepkg manually. I need help with \$derivativeDistribution Use the appropriate support channel for your distribution. Arch is DIY distribution and we expect you to guide us through your system when providing support. Using an installer defeats this expectation. Why was the beginners guide removed? It carried a lot of maintenance on the wiki admin as it duplicated a lot of information, and everyone wanted their addition included. It was scrapped for a compact model that largely referenced the main wiki pages. Why Arch Linux? Arch compared to other distributions Follow the wiki. Random videos are unsupported. <plug>Consider getting involved in Arch Linux!</plug> submitted by /u/Foxboron [link] [comments]
