- Free Software to Remove Smart Video Watermarks like SORA Watermarks and other dynamic watermarks without any Blurring effect on output | Pixbim Video Watermark Remover AI (2025/12/05 08:24)
  Most content creators are looking for software that can remove SORA watermarks, which has become a big challenge. SORA AI videos have created a new milestone in the world of content creation, but they come with dynamic, smart watermarks that appear at different times. Pixbim Video Watermark Remover AI is an absolutely FREE tool that efficiently removes watermarks without any blurring. It works offline and offers unlimited usage for removing watermarks. Free Download link for Pixbim Video Watermark Remover AI [It is an offline software and has to be installed in your laptop/desktop] and supports only windowOS - https://pixbim.com/video-watermark-remover submitted by /u/archadigi [link] [comments]
- Is Parabola GNU/Linux-libre still being updated? (2025/12/04 21:57)
  I am starting to care a lot about free software. So I decided to install Parabola on my Arch laptop, however, when I tried to download their iso's, on ALL of the mirrors, they were from 2022. What? Almost 4 years without being updated? Have they decided to abandon the project or something? I am very used to Arch so.. I thought it was my best choice for a free distro submitted by /u/Every_Tooth6361 [link] [comments]
- I made Grex - a grep tool for Windows that also searches WSL & Docker (2025/12/04 13:07)

- A free Opensource A.I. resource of video tutorials done as an iOS app (2025/12/04 04:09)
  Hey everyone! Just wanted to reshare a project I've been working on for anyone—from beginners to advanced developers—who love exploring how generative AI works. I put together a free app called A.I. DelvePad, and the whole thing is completely free. It's a free toolbox of resources for anyone curious about the nuts and bolts of generative AI. It includes: • 35+ free bite-sized video tutorials (with more on the way) • A free glossary of key AI terms • A free quick intro to how LLMs are trained • A free tutorial-sharing feature so you can pass cool finds to friends • And the entire project is 100% free and open source If you want to make your own resource app—whether it's for YouTube tutorials, Udemy courses, or any hobby you're into—you can dive into the repo and customize it however you like, completely for free. I'd really appreciate any feedback—good or bad. And if you're building your own projects too, keep going! It's always fun seeing what fellow hobbyists are creating. App Store: https://apps.apple.com/us/app/a-i-delvepad/id6743481267 GitHub: https://github.com/leapdeck/AIDelvePad Site: http://aidelvepad.com Happy coding! submitted by /u/Other_Passion_4710 [link] [comments]
- I made a free coloring book website (2025/12/03 22:49)
  https://preview.redd.it/456zta8ti25g1.png?width=737&format=png&auto=webp&s=698c3db1ed3ac0ecc6124f3dbb4d9dd47087b5cf www.kidscoloringgames.com Made a free online coloring game for my nephew - thought other parents might enjoy it too. No ads, no signup, No tracking, works on tablets. submitted by /u/ehivan24 [link] [comments]

- **I built PhotoHaul: a free Windows app that auto-organizes messy photo archives** (2025/12/02 10:01)
  Hi everyone, I'd like to share a small free tool I built for my own photo chaos, and now I'm polishing it with community feedback. - What is PhotoHaul PhotoHaul is a 100% local, no-cloud, no-tracking Windows app that scans any folder or drive (HDD/SSD/USB/SD), detects photos and videos, removes duplicates and reorganizes everything into clean, date-based folders. It's meant for anyone who has years of scattered photos across devices and wants a simple way to consolidate them. - Key features Automatic sorting into YEAR/MONTH folders Duplicate detection (hash-based) Safe Copy mode (never overwrites existing files) Works with any source: HDD, USB sticks, SD cards, phones in MTP mode Optional Android companion app to send photos via WiFi directly to your PC Local-only: no cloud, no accounts, no internet required Installer for Windows + APK for Android Lightweight, portable, no database needed - Why it might be useful If you have photos spread across old laptops, phones, memory cards or external drives, PhotoHaul creates a single organized archive without breaking file structures or touching originals unless you explicitly choose to. It helped me consolidate ~15 years of scattered photos, so I'm hoping it might help others too. - Download + docs Installer, APK, screenshots and a short explanation of how it works are here: -I can't post the link because they'll ban me... I'll try tomorrow - :D Both apps are already released and available for testing. - Feedback wanted I'm looking for: bug reports performance issues missing features edge cases (huge libraries, unusual formats, etc.) Thanks in advance to anyone who wants to try it! submitted by /u/Ok_Button5692 [link] [comments]
- **Built a free collection of 40+ dev tools that run entirely in your browser - would love feedback** (2025/11/29 13:19)
  submitted by /u/Intelligent_Noise_34 [link] [comments]
- **TilBuci version 18 comes with usability improvements and new image manipulation features** (2025/11/25 14:51)
  TilBuci, a free software (MPL-2.0) focused on creating interactive content, reaches version 18: https://github.com/lucasjunqueira-var/tilbuci/releases/tag/v18 Enhanced zoom and graphic elements dragging Support for zooming in and out of images during display has been improved, and now the instance (picture, video, spritemap) has its size changed directly in the layout, no longer being displayed in a popup. In addition, it is now possible to drag instances, as well as check the point at which they are released by visitors, in a collision check. To learn more about these features, we've created a video tutorial showing the process of creating a photo gallery to be distributed on tablets.: https://youtu.be/o-fAWoBMe_M https://preview.redd.it/21xcvv392f3g1.jpg?width=3413&format=pjpg&auto=webp&s=18afbb64030134119cefa7612d7929b454509754 Array manipulation The new array manipulation feature allows for more comprehensive data management in your creations, enabling the development of more complex products. Check item 6 of the "scripting actions" manual for more details about this new feature: https://tilbuci.com.br/files/TilBuci-ScriptingActions.pdf https://preview.redd.it/62g1969a2f3g1.jpg?width=2276&format=pjpg&auto=webp&s=1c0760ca33b84219a5a98270ba969e3805960fba Multiple selection and instance organization The "instances" right tab has gained several new features to simplify your content creation work. Copy/paste: it is now possible to copy one or more instances and paste them into another keyframe or scene within the movie. This feature also works between different workspaces open in the same movie. Multiple selection: by holding down the ctrl (or command) key, it is now possible to select multiple instances at once by clicking at their name on the list. Instance arrangement: with multiple selection, traditional features such as relative alignment, space distribution, and repositioning are now available. https://preview.redd.it/lm0ytcwb2f3g1.jpg?width=1920&format=pjpg&auto=webp&s=da34b5894cbf0ba8081d4e9afb0c871327797629 submitted by /u/chokito76 [link] [comments]

- [OVN-Flow | Open-Source Linux OpenVPN Client Project](#) (2025/11/24 18:10)
  OVN-Flow is a lightweight Open-Source VPN Client Project I have recently released. This was my first publicly released Bash Scripting project. It originally started as a Script to automate the command to run my VPN config for the TryHackMe lesson VMs. Over time, I decided to begin adding features to this script to continue my learning journey in bash scripting. This project developed into a Lightweight VPN client with Multi-Configuration support directly from the interface, 2 Stage Connection Verification and optional Internet Connectivity checks. I intend to continue working on this project and decided to release this Client as an Open-Source Project into the community. Any feedback would be greatly appreciated :) submitted by /u/Front_Version9931 [link] [comments]

- [ViewTouch Restaurant Point of Sale is a shining example of the promise, value, benefit and usefulness of Free Software. Licensed under the GPL, the code is available at GitHub. In this era of Artificial Intelligence, ViewTouch presents an extraordinary opportunity for restaurateurs and developers.](#) (2025/11/23 01:41)
  I started developing restaurant point-of-sale software in 1979. I'm still doing so in 2025. The Free Software License makes it possible for my 45-year-long ViewTouch software project to empower restaurant operations with unparalleled automation, efficiency, cost savings and flexibility. This year, artificial intelligence and a young new developer Ariel Brambila Pelaya, have achieved a refactoring enhancement of the entire ViewTouch codebase. ViewTouch is truly a special and unique example of the potential of free software. Restaurant operators, code developers interested in using artificial intelligence, and Free Software enthusiasts are all invited to join us in this new era! submitted by /u/viewtouch [link] [comments]
- [Python Terminal Coding Effect [Free]](#) (2025/11/22 14:57)
  just a little code effect made in python, if you want a copy let me know! submitted by /u/SynthToshi [link] [comments]

- [MBCompass new version v1.1.12 brings breaking features](#) (2025/11/21 09:56)
  MBCompass: A popular modern FOSS Compass and Navigation app without Ads, IAP, or Tracking New Release: MBCompass v1.1.12 This release and upcoming ones follow the feature roadmap proposed in the v2 design proposal. Features True North Support: Easily switch between True North and Magnetic North using the new toggle in Settings. AMOLED True Dark Theme Added a pure-black AMOLED mode for improved contrast and better battery efficiency on OLED displays. Heading Status Indicator: A new on-screen indicator now clearly shows whether the compass is currently using True North or Magnetic North. Fixes & Improvements Sensor Status Dialog Fix: Resolved an issue where the dialog content was getting cut off on smaller screens. General UI & Stability Updates: Minor interface refinements and performance improvements for a smoother experience. submitted by /u/native-devs [link] [comments]
- [New version of NeuralNetworks for MCUs just released!](#) (2025/11/21 04:47)
  You may wonder how versitile & efficient is. Here's an anecdotal, edge-case example: "ATtiny85 - Image recognition via the internal 512-Byte EEPROM" (I'm sick of corporations profiting of my work [...] that's why I re-licensed it under GPLv3) submitted by /u/_EHLO [link] [comments]
- [Offline face-based photo sorting app (no cloud). Looking for honest feedback before deciding Play Store release](#) (2025/11/20 11:05)

I built a small Android app that clusters faces from local photos entirely on-device (no uploads, no external servers). It creates face groups you can rename and helps browse large libraries privately. Would you personally use an offline face sorting app? If yes, What features would you expect ? Please drop comments below ? submitted by /u/Flat-Falcon-1818 [link] [comments]

- [Dumper v1.9.0 — This is a CLI utility for creating backups databases of various types (PostgreSQL, MySQL and etc.)](#) (2025/11/17 06:45)
  support docker support shell script before and after backup submitted by /u/elkirrs [link] [comments]
- [Distributing GPL software after source is completely lost, but binaries still exist](#) (2025/11/17 01:00)
  I'm curious about the philosophical and legal implications of this hypothetical scenario. The GPL compliant way would be to cease distribution, but if the source code is (somehow) completely lost then distribution is ceased forever which deprives humanity of a useful work. Did I misunderstand? Can you still share binaries if you can't provide the source code when users ask for it? submitted by /u/105850 [link] [comments]
- [In search of free music software](#) (2025/11/15 22:09)

- [MBCompass is now on Weblate - Help us translate the app!](#) (2025/11/09 13:46)
  Hey everyone, I've recently set up MBCompass on Weblate to make it easier for the community to contribute translations. For people don't know the MBCompass app, which is a popular modern, free, and open-source compass and navigation app without ads, IAP, or tracking. it aims to bridges the gap between a compass and a full navigation app - shows direction and live location without using hundreds of MBs of storage or privacy trade-offs. https://github.com/CompassMB/MBCompass Right now, the app has around 55 strings, so translating it is quick and simple. Your contributions will directly help users around the world enjoy the app in their native language. You can check it out and start contributing here: https://hosted.weblate.org/engage/mbcompass/ Feedback and suggestions for the app are also welcome. submitted by /u/native-devs [link] [comments]
- [Where can I find the design documents of binutils?](#) (2025/11/08 17:47)
  All I could find is the user manual and source code. But is there any way by which I could find their design details ? Like a book or blog post or scientific paper ? Thanks. submitted by /u/EmbeddedBro [link] [comments]
