GNOME on Reddit

- [Amberol style like music player but can play the song immediately than put it in a queue?](#) (2025/04/03 01:06)
  I could not find any command line option for Amberol to play the song immediately, it just adds it to the queue. Sometimes when I am in the file manager I just want to play the song immediately, than add it to a queue. submitted by /u/trtryt [link] [comments]
- [Gnome software is the best... And also not](#) (2025/04/02 22:22)
  Let me explain. I like the design of Gnome software center the best among all other GUI software stores available for Linux. I also appreciate the small and little details Gnome adds to its designs. However I think it's not the most performent. To such degree that I often fear to multitask in Gnome software, that is, I let multiple software install in the background while also browsing for other apps. It feels very laggy when I try to do so. So I just stick to installing one app at a time (I don't even browse other apps until that one other app finishes installing) which is kinda slow. I still love to use Gnome software because I feel like it's the only software center in Linux that can compete with Microsoft Store and Apple Store (in terms of design). It'd be really great if Gnome software sees some major performance improvements and more focus. Maybe I'm talking too much but I just love Gnome software among all other software centers. submitted by /u/_sifatullah [link] [comments]

- [What's your font combination?](#) (2025/04/02 16:02)
  Atm I'm using - adwaita sans for interface - ibm plex serif for document text - Monaspace Xenon Var for Monospaced. Unfortunately there's no adwaita serif and adwaita mono does not support ligatures or else will be used adwaita for all type submitted by /u/Stranger_126 [link] [comments]
- [Is it possible to add a custom tile in GNOME's quick settings?](#) (2025/04/02 15:56)
  I would like to add a custom tile to GNOME's quick settings that would execute some lines of code. Is it possible ? submitted by /u/IpilonVD [link] [comments]
- [How to set date format?](#) (2025/04/02 13:54)
  Hello, I am trying out Gnome for a few weeks now (thinking about switching to Fedora from Mac and getting Framework Laptop). So far so good, except some nVidia stuff.... and format settings. Its driving me crazy. On Mac, I can set Region, Calendar, temperature, measurement system, first day of the week, date format, number format... all independent of format. Gnome GUI settings, I cant. So I tried localectl set-locale LC_TIME=en_IE.UTF-8, that set the date format correctly on login screen, but not my session. Then I tried setting ~/.config/environment.d/90-myenvvars.conf with 1:1 same locale... now my terminal shows en_IE format (fastfetch), the top bar date is still in czech. Flatpak config showing

languages: *unset* (default: cs;en). Calendar app also using Czech date format. Is there any way to set this in one place? I am pretty sure I was able to do this in KDE, but cant figure this out in gnome. submitted by /u/InvestigatorIcy424 [link] [comments]

- GNOME 48 broke workspace switching keybindings (2025/04/02 09:13)
I updated to GNOME 48 and its very smooth, but I noticed that my keybindings for switching workspaces are slighlty broken. I have static workspaces turned on and use Super+<N> to go the worksapce, where <N> is the workspace number. But after updating, I noticed that sometimes Super+3 and Super+8 do not work and sometimes they do. This sometimes changes and sometimes its two or three other switch-to-workspace bindings that dont work. Because of the inconstancy, its difficult to figure out what is causing this. Has anyone else experienced something similar? Here is the section from the dconf dump: [org/gnome/desktop/wm/keybindings] switch-to-workspace-1=['<Super>1'] switch-to-workspace-10=['<Super>0'] switch-to-workspace-2=['<Super>2'] switch-to-workspace-3=['<Super>3'] switch-to-workspace-4=['<Super>4'] switch-to-workspace-5=['<Super>5'] switch-to-workspace-6=['<Super>6'] switch-to-workspace-7=['<Super>7'] switch-to-workspace-8=['<Super>8'] switch-to-workspace-9=['<Super>9'] Its worth noting that I do have Space Bar installed and it has an option to use Super+<N> to switch workspaces. I have tried disabling that is only using keybindings I have set using gsettings as I thought there was some conflict. I've also tried the other way around without any luck. submitted by /u/pipewire [link] [comments]
- Nautilus not showing modified date when searching? (2025/04/02 08:50)
When I search for a file in Nautilus, it doesn't display the modified date, only Name/Size/Location. It shows the date normally when I view files, just not when looking for something. Any idea how to change this setting or where the config file for this is? submitted by /u/yodel_anyone [link] [comments]
- Working on a small extension to clear useless notifications (2025/04/02 07:49)
I have been working on a small extension on the past few weeks; The idea is that if a window is interacted with (focused or closed) all notifications for that app should be cleared. Not sure if there is already something like that built into Gnome but haven't found it. I would like to gather some feedback from the community if this even makes sense to have and which features you would like to see. - Começando novamente no Linux, mas desta vez de forma mais consistênte. (2025/04/02 01:04)
Começando novamente no Linux, mas desta vez de forma mais consistênte. Anos apenas testando em máquinas virtuais e dual boot,onde o windows suabia no automático eu ficava com preguiça de reiniciar e entrar no Linux. Agora montei um Pc barato para usar como Pc do dia dia. Não sou de jogar muito apesar de gostar. Escolhi o zorin O.S. Jã estou indo para 45 dias e ainda não precisei ligar o outro computador que tem windows. Bem estavel, reconheceu todos os drives transquilamente, inclusive a placa Wi-fi/bluetooth. (PCI). submitted by /u/Livid_Ad_5320 [link] [comments]
- Any workaround for opening the "activity"/overview using a command on Gnome 46 (Wayland, Ubuntu 24.04)? (2025/04/02 00:52)

- What if? (Concept) (2025/04/01 23:14)
I am not a designer just made for fun. A couple years ago I made a sketch and uploaded here a concept of alternative dock. And recently found out how to make it a bit more dynamic. made in figma. :) Alternative genome concept submitted by /u/Alexeyfdv [link] [comments]
- Fix for UI lag in Chromium-based browsers when using VRR on Gnome 47+ (2025/04/01 22:23)

After enabling VRR via experimental settings using the command gsettings set org.gnome.mutter experimental-features '['variable-refresh-rate']", there was a noticeable delay in web pages in Chromium and similar browsers. For a long time I couldn't find any "solution" for the problem, but in my case adding such startup arguments is enough: --disable-frame-rate-limit --disable-gpu-vsync For example, for ungoogled-chromium from flatpak: /usr/bin/flatpak run --branch=stable --arch=x86_64 --command=/app/bin/chromium --file-forwarding io.github.ungoogled_software.ungoogled_chromium --disable-frame-rate-limit --disable-gpu-vsync @@u %U @@@ I recommend using the Main Menu application (libre-menu-editor) for changes like this, as it automatically creates a copy of the shortcut and adds it to .local/share/applications, which prevents overwriting changes when the package is updated. But of course you can do it manually. Hope this helps someone :) submitted by /u/hilltty [link] [comments]

- How to make ptyxis terminal use titlebar buttons from theme? (2025/04/01 21:25)

- Change notification text color (2025/04/01 20:57)
  https://preview.redd.it/vivuttlaease1.png?width=441&format=png&auto=webp&s=fbd65de96af9d8d9b3c5a81ef1dcb7722426594f https://preview.redd.it/oqlkcoxaease1.png?width=441&format=png&auto=webp&s=a99b76e74d30e832a772d1044bf8d3f983d084dd Title. 1st image is default dark, 2nd is my custom theme. What exactly do I need to change in the .css? Also, why is literally every theme that I install doing this? I've tried the Nighfox, Gruvbox and Kanagawa themes and all of them set the text to black. submitted by /u/LTwr3nch [link] [comments]
- Disable trash globally (2025/04/01 20:45)
  Hi, Is there a way to disable the trash as a feature? I did a bit of research, looked into dconf. A lot of application specific details, but nothing like "no trash can at all as if it were never invented". Is it so, or I just look the wrong way? submitted by /u/AwkwardNumber7584 [link] [comments]
- I hate Nvidia (2025/04/01 18:06)
  I've always used nouveau driver and after upgrading Gnome to version 48 I started to hate Nvidia and myself a lot, because I changed my amd video card to nvidia 2 years ago. I used to use Arch + Gnome, but now I have to go back to Fedora + Gnome 47. 48 version is impossible to use with nouveau driver. All animations are very laggy. I tried kernel 6.14, I thought maybe something would change. but unfortunately nothing did. Nvidia, Fuck You! submitted by /u/awesome_machines [link] [comments]
- Only enable Nautilus file browser to search if Ctrl F is explicitly pressed? (2025/04/01 17:44)
  While using file browser, if I accidentally press any letter, it will automatically search within the directory. How do I prevent this? I'm using Gnome 42. submitted by /u/Long_Bed_4568 [link] [comments]
- HDR in Firefox 138 (2025/04/01 12:54)
  On Arch you can install "firefox-developer-edition" (this is v138) and in "about:config" set both "gfx.wayland.hdr" and "gfx.webrender.compositor.force-enabled" to "true". Of course you also need to enable HDR in Settings/Displays. Some notes: not sure if "gfx.webrender.compositor.force-enabled" is needed. I also tried it in Firefox 137 but couldn't make it work. Enjoy it! submitted by /u/trofosila [link] [comments]
- Thank you all for the initial feedback surrounding my Libadwaita tinting post! I want to gather a more fine opinion regarding this. (2025/04/01 12:39)

In the mindset of appeasing everyone, I want to make certain everyone can be happy and not leave out anyone who disliked my first iteration of this idea. I do have plans on how 2 through 4 could be internally implemented that would cause less headaches which can be discussed later. Choose one from multiple that you would think best fit: No new tinting implemented. (Keep it simple like current Libadwaita behavior. No risk approach for any possible potential issues with app appearance.) Have tinting based on accent color only and expose a slider for intensity. (0% being no tint at all giving default current Libadwaita 1.7 look.) Have tinting use its own list of colors separate from the accent color and expose a slider same as option 2. (No monochrome look.) Have tinting be instead three buttons to select temperature between cool, neutral, warm. (All of which would only give minor appearance changes. Cool would be the default current Libadwaita 1.7 look. Neutral would be pre 1.7.) Something else. (Post what it is!) submitted by /u/Zechariah_B_ [link] [comments]
