Improves the system adaptability

TROM-Jaro makes your system more flexible and versatile, lighter weight or heavier, smaller or larger, even makes it portable.

TROM-Jaro is a stable system using the very latest versions of every kind of application you need, from the Arch Linux and Manjaro community repositories, but also from various repositories compatible with most of the modern Linux distributions:

- AppImage (portable applications),

- Flatpak (so you can run the desired application in a sandbox) and

- Zero Install (a decentralised cross-platform software installation system).
