Updates

In TROM-Jaro you don’t have to worry about updates. Others worry for you :). And so, whenever something gets updated (the system itself or an application), you’ll get a desktop notification and it is your choice if you want to update or not. The update process is fast and super easy, similar to installing an application. An up-to-date TROM-Jaro is always more functional and more secure. So we recommend keeping the system up-to-date.

Note: TROM-Jaro is based on a “rolling release” – meaning that you will get the latest Linux updates very very fast, which raises the possibility of errors (bugs) with the updates due to the amount of them. Because of that we reduced the update-check to once a week to try and avoid such problems. You can change that from Add/Remove Software (click Menu and then Settings).
